CARBONDALE, ILL., Jan. -- Southern Illinois University's music department will present operatic tenor Leslie Chabay in a public recital Thursday (Jan. 7) at 3:15 p.m. in Shryock Auditorium.

Chabay, former member of the Metropolitan and San Francisco Opera Companies, has been artist-in-residence at Washington University in St. Louis since 1955. He was distinguished visiting professor at SIU last year.

On Jan. 13 Chabay will begin a five-month concert tour that will take him to Japan, India, Israel, Switzerland, Holland and his native Hungary. He will return in June to resume regular duties as tenor-in-residence at the Aspen (Colo.) Music Festival.

Chabay's recital will include 16th and 17th century songs by Schuetz, Monteverdi and Daviadana as well as works by Schubert, Brahms and Moussorgsky and a group of Hungarian folk songs by Bela Bartok.

Carbondale, Ill., Jan. -- A 20-week television course on beauty and grooming will be offered by Southern Illinois University's Division of Adult and Technical Education beginning Feb. 13, it was announced today.

Harry B. Bauernfeind, assistant dean of the division, said the course "Reflections on Beauty" will be taught by Miss Eleanor Mathis of SIU's Vocational Technical Institute, coordinator of the cosmetology program.

It will be telecast each Saturday from 11:30 a.m. until noon over WSIL-TV, Harrisburg, and will deal with glamor subjects "in a very matter-of-fact way", Bauernfeind said.

The course will include grooming problems from hair to properly fitted shoes and will alternate between basic beauty problems and allied phases of good grooming such as posture, care of the skin, coordinated hair and hat styling, and tips on correct carriage.

Other topics to be discussed include hair conditioning, hair coloring, manicuring, makeup, etiquette, poise, personality, fashions, and the contents of a healthful diet.

Interested persons may register by mail by sending \$3.50 to Adult Education, Southern Illinois University, Carbondale. This entitles them to materials to be mailed at least six times during the course and a certificate upon completion of the class.

CARBONDALE, ILL., Jan. -- James W. Porter, master's degree candidate at the University of Wisconsin, has been appointed a research assistant in the Southern Illinois University museum to supervise field work in the Museum's highway archaeological salvage program.

Porter, a native of Milwaukee, Wisc., is completing his master's degree thesis on "The Value of Lithic Analysis in Archaeological Interpretation." He began his duties at the Museum this week. He is a member of the Wisconsin Archaeological Society, and has had experience in highway salvage and other archaeological field work at the University of Wisconsin.

CARBONDALE, ILL., Jan. -- The annual spring conference of the Southern Illinois School Press Association will be held on the campus of Southern Illinois University April 9, it was announced today.

Don Carter, executive director of The Newspaper Fund, Inc., will be the chief speaker during the meeting of high school newspaper advisers and students.

The Newspaper Fund, under terms of a gift from the Wall Street Journal, makes available each summer a minimum of 100 fellowships for high school journalism teachers to attend summer colleges of their choice. Purpose of these fellowships is to assist teachers of journalism and school publications advisers to obtain university training in journalism.

Mr. Naomi Patheal, newspaper adviser at Carbondale Community High School, attended summer school at SIU in 1959 under a Fund grant.

ATTENTION: SPORTS EDITORS.

CARBONDALE, ILL., Jan. -- Southern Illinois University's radio station, WSIU - FM (91.9 mc.), will begin a new Saturday program, "The High School Game of the Week," at 1:30 p.m. this Saturday (Jan. 9), according to Ralph Becker, station faculty supervisor.

This week's selection will be a rebroadcast of Friday night's (Jan. 8) South Seven Conference clash at Marion between West Frankfort and Marion. WSIU sportscasters will record the play-by-play account at the game scene for rebroadcast the following afternoon.

The game-of-the-week selection for the Jan. 16 program will be the Southwestern Egyptian Conference contest at Pinckneyville High School with Anna-Jonesboro as the visiting team.

Carbondale, Ill., Jan. — James Bell, Jr., a lightning-fast hand with a gun, says he knows young housewives who could easily outdraw Jesse James in his prime.

Bell, an 18-year-old Southern Illinois University student from Franklin Park, Ill., can draw a Colt .45 in one-eighth of a second. Most experts judge that old-time gunslingers like James and Doc Holliday did well to draw and shoot in half-a-second.

Though he's top gun in the 100-member Bell's Frontier Quick Draw Club started by his family in the Chicago area, Jim numbers among his acquaintances ~~women~~ who are twice as fast as the best frontier marshal and outlaw.

"Women naturally have nimble hands. They have ~~come~~ into our club and learned in one night to outdraw men who have been members for quite a while."

Fast draw clubs have become so popular there are now 500 of them over the country. Members of Bell's Frontier Quick Draw Club, only chartered club of its kind in Illinois, often do benefit shows for hospitals and orphanages. Club members are never allowed to use live ammunition, only blanks and cartridges with wax slugs.

Jim Bell, who comes from a four-generation family of gunsmiths -- his father owns a gun and sport shop in Franklin Park -- is much in demand for personal appearances. He did a stint with Sammy Davis, Jr., at the Chez Paree in Chicago last year.

After finishing college, he plans to tour the country demonstrating the fast draw for the Colt Patent Firearms Co.

CARBONDALE, ILL., Jan. -- Southern Illinois University's fifth annual Fine Arts Festival opens Jan. 31 with a three-week long schedule of exhibitions, lectures and performances dedicated to "Contemporary American Arts."

The 1960 Festival theme will be reflected in a variety of modern settings ranging from an exhibit of jewelry, pottery and weaving by young American craftsmen to a concert by the ultra-progressive J. J. Johnson Jazz Quintet.

All but two attractions on the Festival calendar will be free to the public. A Feb. 18 concert by the New Orleans Philharmonic Symphony Orchestra will be open only to Carbondale Community Concert members.

Among Festival highlights will be a day-long Symposium of Illinois Composers on Feb. 13, when original works by 22 Illinois students, teachers and professionals will be played in three separate concerts. The Oxford String Quartet and several SIU musical groups and soloists will perform the works. Organist Leo Sowerby, Pianist Rudolph Ganz and SIU's own Will Gay Bottje will be among composers represented.

The Festival will open at 3 p.m. on the 31st with an address by SIU President Delyte W. Morris and a concert by the famed Eastman String Quartet. At 4:15 p.m., the doors will open on five art exhibitions scheduled to be on display for the rest of the Festival.

"Drawings by Paul Burlin" and the American Federation of Arts' traveling show, "Some Younger American Painters," will open in Allyn Gallery. Two visual design shows, "Printing for Commerce" and "50 Best Ads of the Year" will be in Morris Library, and "Contemporary American Crafts," an invitational exhibit arranged by SIU faculty artists Lysbeth Wallace, Nicholas Vergette and Frederick Lauritzen, will open in the University Museum. The exhibit will include pottery, weaving, a silversmithing and jewelry by many of America's foremost craftsmen.

Another exhibit, "Made in U. S. A.: Good Design for \$1," will go up in the Home Economics Building Feb. 6. The unique show features well-designed manufactured objects which sell for \$1 or less.

m o r e

In subsequent days, Festival-goers will also see and hear performances by the Merce Cunningham Dance Company (Feb. 3), the Eger Players chamber music group (Feb. 17 and 18) and the Oxford String Quartet, New Orleans Symphony and J. J. Johnson Quintet. In addition to its 8 p.m. appearance for Community Concert members on Feb. 18, the New Orleans Symphony will present an afternoon program for area school children.

Public lectures will be given by sculptor and critic Sidney Geist, winter-term visiting professor at SIU (Feb. 9); playwright and director William Oliver (Feb. 8); visual designer and film experimenter Francis Thompson (Feb. 10); drama critic John Beaufort of the "Christian Science Monitor" (Feb. 11) and Ingolf Dahl, University of Southern California composer (Feb. 13). Geist, painter Paul Burlin, critic George McCue of the St. Louis Post-Dispatch and SIU art department chairman Warren Brandt will discuss modern art in a Feb. 2 symposium in the Woody Hall Formal Lounge.

First performances of original compositions by Bottje and Robert Mueller, also of the SIU music department faculty, will be heard in separate concerts. On Feb. 7, the University Choir will sing Bottje's "What Is a Man?" a choral cycle with narration by William Taylor, director of the SIU Opera Workshop.

Mueller will play his own "Concert Piece for Piano and Orchestra" in a Sunday afternoon program with the University Concert Band and Orchestra, Feb. 14, at Shryock Auditorium. The same concert will feature a performance of Dahl's "Sonata Seria" with Dahl at the keyboard.

A costume ball, sponsored by design students, will wind up the Festival on Feb. 19.

CARBONDALE, ILL., Jan. -- Unstable emotions, family friction and the "steady date" are three major causes of America's zooming teenage marriage rate

These are the conclusions of a Southern Illinois University family relations specialist after an intensive two-year study of some 3,500 high school girls, including 436 who married during the two-year period, 313 of them at age 18 or younger.

The study by Dr. J. Joel Moss, research professor in the SIU School of Home Economics, also points out that 31 percent of the teen-age wives reported they were pregnant when they married.

Dr. Moss, who until he came to SIU last fall was head of the division of family relations and child development at the University of Nebraska, conducted his study of early marriage in that state.

He learned that, statistically, the number of early marriages more than doubled in Nebraska from 1940 to 1950. By 1957, Vital Statistic Bureau figures showed that 23.4 percent of all girls and 4.3 percent of all men married in that state in that year were age 18 or younger.

To obtain more detailed facts, Dr. Moss conducted follow-up studies, including questionnaires, personality check-lists and personal interviews among 297 of the early married girls surveyed, and among a control group of unmarried girls.

Among the findings of the study, which he reported in the latest issue of the journal "Marriage and Family Relations," in collaboration with Mr. Ruby Gingles, were the following:

. . . "Going steady" encourages early marriage. "Whereas 83 percent of the early married group were dating only one boy, going steady or engaged, only 34 percent of the control group had settled into such a steady pattern."

. . . The girls who married early tended to be less well-adjusted emotionally than their schoolmates.

m o r e

[illegible]

1950-1951

[illegible]

. . . The girls who married early tended to have less satisfying relationships with their parental families than their classmates before marriage. On the other hand, parents generally accepted the early marriages after the fact, even if they did verbally frown upon the idea of young marriages. The young wives reported frequent contacts and close relationships with their parents after marriage.

. . . Early marriage doesn't necessarily stem from a lower socio-economic status. There was very little difference in the educational background of parents of the early married girls and those of the control group -- in general an average of between 10 and 11 years of school for the fathers, between nine and 10 years for the mothers in each case. Eighty-five percent of the control group and 87 percent of the early married group felt that their parents could afford to pay all or part of their college expenses.

. . . Girls who married young had less interest in continuing their education. Twice as many of the unmarried girls planned to go on to college as did the married ones, it was indicated in questionnaires filled out at an early stage in the study, before any of the girls married.

. . . Early marriage often puts an end to education for the husband, and in most cases, while he was expected to be the sole breadwinner, he planned little or no vocational training beyond the high school level.

. . . While the number of boys marrying at 18 or younger is also increasing, the average husband in these early marriages was almost five and a half years older than his wife, a factor which the researchers felt might contribute to the stability of the marriage.

. . . In the early months of their marital adjustment, the married girls did not see sexual relations as a problem of major importance, the investigators found, but "the fact that 31 percent of the girls reported that they were pregnant when they married indicates that pre-marital sexual relations did present a problem for many of them."

In conclusion, the family life specialists pointed to "the emergence of two types of girls with an orientation toward early marriage":

(1) "a type who is emotionally insecure and feels pushed toward marriage as an escape from an unhappy environment into something which gives promise of being more satisfactory," and

(2) "a type who is early in maturing, and whose aspiration level and expectation of marital happiness are comparatively low."

"These types are not exclusive of each other, but their existence indicates that they must be taken into consideration in any assessment of marital success at a later date," they explained.

"Another emerging factor in these early marriages is the age difference of the bride and groom which indicates that the stability of the marriage may be partially dependent upon the maturity of the husband."

Dr. Moss was a contributor of some of the background information for a lengthy article on teen-age marriages which appeared in the November issue of McCall's magazine.

CARBONDALE, Ill., Jan. -- Five workshops will be conducted at Southern Illinois University this summer for high school students, William E. Buys, summer high school workshop co-ordinator, announced today.

It is the fourth year in which SIU has sponsored such programs through which superior high school students currently in their sophomore or junior years are given a chance at additional training.

Students live in university-supervised residence halls, and may participate in a full summer social program including swimming, field trips, dances, horseback riding, plays and operettas.

The five workshops this summer will be in journalism, radio and television, debate, drama and art.

The journalism workshop will deal with problems of school newspapers and year-books, and students will produce a workshop newspaper.

Those taking part in the debate workshop will study and prepare cases in the problem area of the national high school debate production. Experiences are also provided in oratory, extemporaneous speaking and after-dinner speaking.

In drama, work consists of technical theatre, staging, acting, and production and includes the producing of a three-act play.

Added for the first time this year, the radio and TV workshop will offer experiences in announcing, programming, writing and production of radio and TV shows. Students in this workshop will use SIU's radio-TV facilities.

The art workshop, also added for the first time, is to provide experience for outstanding students in sketching, painting, sculpturing and in the use of other materials and methods relating to art.

Persons desiring further information on any of the workshops may write to William E. Buys, summer high school workshop co-ordinator, University School, Carbondale, Illinois.

CARBONDALE, ILL., Jan. -- Dr. Sheldon Steinberg, assistant professor of health education at Southern Illinois University, has accepted a position as state director of public education for the Illinois Division of the American Cancer Society.

Steinberg will be on leave-of-absence from Southern from mid-March of this year to September, 1961, the duration of his appointment. He will live in Arlington Heights.

In his post, Steinberg will be responsible for developing cancer-education programs in schools and universities, the medical profession, industrial, labor, rural, and lay groups. His office will be in Chicago.

A native of New York City, Steinberg taught at Brooklyn College and Queens College before coming to Southern in 1956. He holds degrees from Brooklyn College and Columbia University.

Steinberg, currently educational chairman for the Jackson County Cancer Society, has been widely active in regional, state and national health education programs. He directed the award-winning Paducah Health Education Survey in 1958 and has recently completed a detailed study of the use of flouride prescriptions by American dentists. He has published many articles in professional journals and a series of newspaper articles on medical quackery and consumer health.

CARBONDALE, ILL., Jan. -- Southern Illinois University's department of sociology has announced plans for a basic research center to study an ageless problem: what makes people drink?

To head the project, the department has hired Yale University's Dr. Charles Snyder, who is called by Chairman Paul Campisi "one of America's leading sociologists in the field of alcohol studies."

Snyder, associate director of Yale's famed Center of Alcohol Studies, will join the SIU faculty in February as a full professor. His best-known work, "Alcohol and the Jews," was published in 1958 and he is working on three other major projects, a book on "Society, Culture and Drinking Patterns" and experimental studies involving alcohol and problem-solving and a cross-cultural examination of alcohol consumption.

Campisi said the alcohol research will be part of a "dream" program making up a Center for the Study of Deviant Behavior, which in turn will be the keystone of a doctoral degree program in sociology at SIU. In time, he said, the Center will expand to undertake similar behavioral research on crime and narcotics addiction.

Outside of Yale, Southern will be the first U. S. university to inaugurate a basic research program covering the "why" and "how" of drinking behavior. Campisi said no other Illinois institution is at work on the problem despite the fact that a two-cent state tax bite on every gallon of spirits is earmarked specifically for education and research. The State Division of Alcoholism is the only Illinois agency pursuing fundamental research, although many schools and agencies are at work on programs of treating and counseling the alcoholic.

Snyder, only 35, received masters and doctoral degrees from Yale and has been on the staff of the Center for Alcohol Studies since 1950. He is a member of the editorial board of the Quarterly Journal of Studies of Alcohol, to which he has contributed a number of "landmark" research articles in the past nine years. He has also taught at the Yale Summer School of Alcohol Studies.

Snyder and Dr. David Pittman of the Washington (Mo.) University sociology department, are editors of a book of readings sponsored by the Society for the Study of Social Problems and slated for publication this year. The volume will contain some 40 readings covering the best social science research on the "phenomena of drinking" throughout the world.

URGENT: IMMEDIATE

CARHONDALE, Ill., Jan. -- Southern Illinois University's department of

sociology has announced plans for a basic research center to study an aspect

problem which makes people drink.

To head the project, the department has hired Yale University's Dr. Charles

Snyder, who is called by Chairman Paul Campbell, "one of America's leading sociologists

in the field of alcohol studies."

Snyder, associate director of Yale's famed Center of Alcohol Studies, will

join the SIU faculty in February as a full professor. His best-known work, "Alcohol

and the Jews," was published in 1958 and he is working on three other major projects

a book on "Society, Culture and Drinking Patterns" and experimental studies involving

alcohol and problem-solving and a cross-cultural examination of alcohol consumption.

Campbell said the alcohol research will be part of a "broad" program being set up

a Center for the Study of Deviant Behavior, which in turn will be the nucleus of

a doctoral degree program in sociology at SIU. In time, he said, the center will

expand to undertake similar behavioral research on crime and antisocial behavior.

Outside of Yale, Snyder will be the first U. S. university to inaugurate a

basic research program covering the "why" and "how" of drinking behavior. Snyder

said no other Illinois institution is at work on the problem despite the fact that

a two-cent state tax hits on every gallon of spirits is earmarked specifically

for education and research. The State Division of Alcoholism is the only Illinois

agency providing fundamental research, although many schools and agencies are at

work on programs of treating and counseling the alcoholic.

CARBONDALE, ILL., Jan. -- A workshop for public officials and civic leaders interested in upgrading the quality of housing of their communities will be held at Southern Illinois University next Thursday (Jan. 28).

Speakers will be drawn from the U. S. Public Health Service; Urban Renewal Administration; Illinois State Housing Board, and SIU's department of community development. They will discuss federal housing aids, state housing laws, building and housing codes and their enforcement, sources of professional assistance, and the relationship between housing and hygiene.

The program is billed as a Housing -Hygiene Workshop. It will be held in the SIU Agriculture Building seminar room, beginning at 9 a.m. Those attending will be welcomed in an address at 9:30 a.m. by Robert E. Knittel, director of SIU's department of community development, and he will summarize the workshop at 4 p.m.

Other speakers will include Frank A. Kirk, city planner for the SIU department; Sherwood Pine, assistant regional director of the Urban Renewal Administration, Chicago; J. Russell Scott, general counsel for the Illinois State Housing Board, and Thad Patrick of the Sanitation Training Section of the U. S. Public Health Service.

Co-sponsoring the workshop with SIU are the U. S. Public Health Service and the Illinois Department of Public Health. Registration fee is \$1.

ATTENTION: FARM EDITORS

SIU COUNTRY COLUMN
By Albert Meyer

Farm ponds are more important in southern Illinois than is generally realized, but poor location, faulty construction, and misuse are common problems. That is the conclusion of Robert K. Holz, a former geography graduate student at Southern Illinois University in his master's degree thesis now in file in the SIU library.

Holz made a study of the distribution and use of man-made ponds in Jackson County, an area he selected because it included land types common to all of southern Illinois and provided a manageable sample area for his survey. He found 714 farm ponds in the county and selected 100 of them at random for detailed study.

It is important that farmers study the water needs of the farms as well as the available pond locations before starting to build a pond. Most of the farmers he interviewed said that they would build their pond bigger and deeper if they had it to do over again. Nearly two-thirds of the sample ponds were one-half acre or less in size. The biggest concentration of ponds is in the rolling land areas where soils have a considerable amount of clay -- best suited for non-leaking ponds.

Too few farmers seek competent technical advice on such things as the needed watershed area, erosion control to prevent silting, and where and how to build the dam and spillway. This help may come from the state department of conservation, local construction companies that build ponds, the soil conservation service, and university experiment stations. The spillway is highly important. If it is not properly located or large enough to handle excess water from the watershed, the farmer may have the dam wash out from water flowing over the top.

Stock watering was the most important and frequent use for farm ponds. Holz found three-fourths of the ponds used for this purpose. All should be fenced with a float-regulated watering tank below the dam or some similar way of watering livestock. Only 16 of the 100 ponds were fenced, however.

Nearly two-thirds of the ponds were listed for multiple uses, both recreational and economic. Fishing was the most common recreational use for farm ponds. Farm ponds that have been stocked often are not fished heavily enough to maintain a balanced population, he said.

THE CARBONATE
UNIVERSITY

These points are more important in southern Illinois than in generally realized
 has poor location, fairly unattractive, and shows no common problems. This is
 the collection of Robert M. Kohn, a former geology student at Southern
 Illinois University in the center's degree records was in file in the 1910s.
 Kohn made a survey of the distribution and use of carbonate points in Illinois
 County, as well as selected because it included both areas common to all of southern
 Illinois and provided a geological map for the survey. He found 714
 points in the county and selected 100 of them as typical for detailed study.
 It is important that Kohn's study was made at the time of the survey and
 available point locations being selected to build a base. Some of the points he
 interviewed with him were still in their original form and shape. It was not
 in the over section. Nearly two-thirds of the sample points were one-half mile or less
 in size. The highest concentration of points is in the rolling land near
 Kohn have a considerable amount of clay - best suited for manufacturing
 The last section each contains a general notice on such things as the general
 vegetation, soil, weather conditions, general geology, and other data on each of the
 one and a half. This helps to show the general distribution of carbonate
 local concentrations compared with local points, the soil composition, and
 underlying geologic structure. The geology is mostly limestone. It is in the
 generally located on large areas of low-lying land near the waterway, the
 Kohn only have the low water level over the top.
 Kohn's waterway and the most important and typical one for this study. Kohn
 found three-quarters of the points used for this purpose. All should be found with
 a three-quarter section from below the dam or some other way of measuring.
 However, only 15 of the 100 points were located, however.
 Nearly two-thirds of the points were listed for multiple use, both recreational
 and economic. Listing the use of each point is not the purpose. Some
 points have been found which are not listed nearby points for additional
 material purposes, in fact.

PEOPLE SHOULD GET
ALL EDUCATION THEY
CAN ABSORB: MORRIS

SPRINGFIELD, ILL., Jan. -- Every man and woman should have the opportunity to get "all of the education which they are capable of absorbing," Southern Illinois University President Delyte W. Morris told a recent meeting here in a plea for passage of the state building bond issue.

"If additional space is not constructed, we will have no alternative but to restrict enrollments," Morris told the Rotary Club and Springfield area SIU alumni.

Adding that this was inconsistent with the philosophy at SIU, he said it was Southern's goal to insure the education of everyone within its service area "to a level commensurate with their ability."

"By fulfilling this ambition," Morris said, "we will be doing our part to solve one of the great problems of all time -- that of finding ways to preserve and strengthen our free society by providing it with a membership capable of responsible moral choice."

The building bond issue, which comes to a second vote at the polls in November, would allocate \$195 million for new construction on the campuses of the six state-supported universities.

SIU TO OFFER
HIGH SCHOOLERS
FIVE WORKSHOPS

CARBONDALE, ILL., Jan. -- Five workshops will be conducted at Southern Illinois University during the summer term for high school students.

The workshops will be in the fields of journalism, radio and television, debate, drama and art.

It is the fourth year in which SIU has sponsored such programs through which superior high school students currently in their sophomore or junior years are given a chance at additional training.

Students live in university-supervised residence halls, and may participate in a full summer social program including swimming, field trips, dances, horseback riding, plays and operettas.

Added for the first time this year, the radio and TV workshop will offer experiences in announcing, programming, writing and production of radio and TV shows. Students in this workshop will use SIU's radio-TV facilities.

Persons desiring further information on any of the workshops may write to William E. Buys, summer high school workshop co-ordinator, University School, Carbondale, Illinois.

YALE PROFESSOR
TO DIRECT CENTER
FOR STUDY AT SIU

CARBONDALE, ILL., Jan. -- Southern Illinois University's department of sociology has announced plans for a basic research center to study an ageless problem: what makes people drink?

To head the project, the department has hired Yale University's Dr. Charles Snyder, who is called by Chairman Paul Campisi "one of America's leading sociologists in the field of alcohol studies."

Outside of Yale, Southern will be the first U. S. university to inaugurate a basic research program covering the "why" and "how" of drinking behavior. Campisi said no other Illinois institution is at work on the problem despite the fact that a two-cent state tax bite on every gallon of spirits is earmarked specifically for education and research. The State Division of Alcoholism is the only Illinois agency pursuing fundamental research, although many schools and agencies are at work on programs of treating and counseling the alcoholic.

BEHIND PRISON WALLS
John W. Allen
Southern Illinois University

Boys once thought that there was an open season on watermelons that extended from the time they began to ripen until killing frost. On that presumption two chunks of lads, after a sultry summer day in 1900, paid an unannounced nocturnal visit to the combination tobacco-watermelon patch of Frank Willis. Two larger melons that successfully passed the finger nail and thumping tests, and as thorough a "curl" inspection as the limited moonlight permitted, were detached by the boys and rolled into the adjoining sorghum. (Both melons were ripe.)

The crime committed, like most others, was far from a perfect one. No F.B.I. trained operative was needed to discover the culprits. Two fathers, ordinarily indulgent and kindly, turned grim and set about making proper adjustments. Among the actions they prescribed was a "manly" call upon Mr. Willis. They even volunteered to go as far as the house of a neighbor they wanted to see -- in easy sight of the Willis place.

To the boys' amazement Mr. Willis was surprisingly courteous, calm and dignified. He was even considerate enough to invite his callers to share a really nice melon from a number lying in the shade and covered with wetted burlap. (This melon was hardly as tasteful as either of the night before, but time has sweetened it.) It is just possible that the whole procedure had been prearranged by Mr. Willis and the two fathers.

After a considerable amount of hesitancy and stammering the boys managed to say enough words to add up to "We're sorry." The wronged melon grower surely was a criminologist far in advance of his time. Without railing, ranting, preaching or threatening, he calmly assured his youthful visitors that he wasn't angry. He then explained that success in such a little crime could easily lead to

Southern Illinois University

Boys and thought that there was an open season on woodchucks that extended
from the time they began to sign until killing time. In the past, the two
chicks of a pair after a winter's stay in 1900, paid an annual visit to the
visit to the condition between the two chicks of Frank Willie. Two larger
chicks that successfully killed the finger nail and finger nail, and as the
"curl" indicated in the Illinois medical history, were killed by the boys
and killed in the Illinois medical history. (Both chicks were killed.)

The crime committed, like most others, was for a long time. The crime
trained operators was needed to discover the culprit. In 1900, ordinarily,
independent and finally, turned out to be about making proper adjustments. Many
the action they described as a "body" call from Mr. Willis. They even went
to go as far as the house of a neighbor they wanted to see -- in easy steps
of the Willis case.

To the boys' amazement, Mr. Willis was surprisingly comfortable, calm and cheerful.
He was even comfortable enough to invite his callers to share a really nice meal
from a number of the chicks and covered with white paper. (This meal was
hardly as good as either of the night before, but the boys were satisfied.) If
it just possible that the whole procedure had been prepared by Mr. Willis and the
two chicks.

After a considerable amount of hesitation and stammering the boys managed to say
enough words to add up to "What's wrong?" The women's reaction was a
calm and quiet for the women of his time. Without talking, without speaking or
the action, he calmly assured the women that he wasn't sorry. He then
explained that success in such a little crime could easily lead to

offensives more grave, perhaps even to the penitentiary. He mentioned the case of a nearby neighbor who had that very week been taken to the prison at Chester (Menard) for raiding a neighbor's smokehouse. After a bit more of small talk and an invitation to "come and see me again, boys," two subdued youngsters departed with high regard for Mr. Willis and a stern resolve to avoid all penitentiaries.

Now, the only survivor of this little drama has given in and goes, luckily by invitation, to the same awesome prison envisaged in boyhood. This voluntary journey will be made with members of the Southern Illinois Editorial Association, Jan. 23. Having accepted the invitation, he thought it would be well to "case the joint" somewhat and thus know more of the host institution, and how it got that way.

It was learned that there was no central state-maintained prison for Illinois until 1827 when one was built at Alton. Funds for its building came principally from sales of about 80,000 acres of lands belonging to the Salines near Equality. This first prison, containing 25 cells, was on a 10-acre plot of ground that constituted the "prison bounds". They were the walking limit of certain civil case prisoners, such as debtors who were sometimes allowed outside the locked jail. Those sentenced for criminal offenses had no such privileges.

In 1858 another penitentiary was built at Joliet and newly-sentenced prisoners were sent there. The Alton prison was abandoned in 1860. With the coming of the Civil War the Federal government took over the Alton plant and used it as a place to hold Confederate prisoners of war.

By the mid 1870's prison facilities at Joliet became inadequate and the Illinois legislature, on May 24, 1877, authorized the building of another penitentiary at Menard. In October of the same year work on a cellhouse was begun. On March 21, 1878, it was ready and about 200 prisoners, brought from Joliet to Menard for work on the building, were quartered in the recently completed cell house.

Since that time many new buildings have been added, and appearance changed accordingly. One characteristic, however -- that of grimness -- has remained. The whole plant wears a look of brutal solidity, both from without and from within.

[illegible]

old Communist espionage of war.

[illegible]

Not only that, but many have been killed and injured. The

Perhaps this should be expected for, after all, prisons are not built to invite guests but to confine reluctant tenants. A visitor to the penitentiary at Menard comes away feeling that he has visited a remote walled city.

At few places, however, are efforts to rehabilitate, reform, and reclaim prisoners more evident or more consistently applied than they are at Menard. The life of a prisoner is still no plush assignment, but Menard definitely represents a far cry from the punitive and often vicious course prisons once pursued. But more of that soon.

SPARTA, Ill., Jan.-- Members of the Southern Illinois Editorial Association will hold their annual winter meeting at the Menard Penitentiary. Saturday (Jan. 23), according to President William Morgan, editor of the Sparta News-Plaindealer.

Principal speakers will be Warden Ross V. Randolph and State Rep. Paul Simon, publisher of the Troy Tribune.

Representing the Menard Time, recognized as the nation's foremost prison newspaper, will be the paper's founder, John File, superintendent of printing at Menard, and David Rae Saunders, editor.

CIVIL WAR DOCUMENTS
SOUGHT IN SEARCH BY
CENTENNIAL PLANNERS

CARBONDALE, Ill., Jan.-- Calling for a statewide historical revival, the Illinois Civil War Centennial Commission headed by Senator George P. Johns, Decatur, took initial steps at a meeting here for a series of observances beginning in 1961.

Citizens were urged to search attics and family libraries for diaries, letters and other documents pertaining to Illinois soldiers in the War Between the States, which started in April, 1861, and to report such findings to the Commission.

"The South has risen," said State Historian Clyde Walton, Commission secretary, at a Southern Illinois University planning meeting recently.

Representative Ralph Stephenson, Moline, vice chairman who introduced the bill creating the Commission, related that Illinois might have by-passed the Centennial had House members not reconsidered after once defeating the bill. It would be shameful, he said, not to honor in centennial observances the state's 35,000 who died in the war and the 169 regiments of volunteers, proportionately more than from any other state.

Commission member Robert E. Miller, Jr., of the Springfield Civil War Roundtable said widespread help is needed in the form of suggestions in order that the Commission's report to the legislature may be as complete as possible.

Senator Johns said the Commission will seek various means to publicize all "points of the Civil War" in Illinois, to compile in chronological order Civil War events affecting Illinois residents, and to unearth pertinent records, photographs and other materials of importance to historical scholars. He said an advisory council will be created to assist the Commission.

RECEIVED
JAN 11 1951
U.S. DEPARTMENT OF JUSTICE
FEDERAL BUREAU OF INVESTIGATION

CHICAGO, ILL., Jan. 11 - Calling for a national investigation, the

Illinois Civil War Centennial Commission, headed by Governor George W. Patton,

Decatur, today initiated plans for a series of conferences

beginning in 1951.

Citizens were urged to search homes and family treasuries for

letters and other documents pertaining to Illinois soldiers in the War between the

States, which started in April, 1861, and to report such findings to the

Commission.

"The South has asked," said State Director Oliver Patton, Commission

secretary, at a Southern Illinois University meeting today.

Representative Ralph Thompson, Illinois, who introduced the legislation for

the Illinois Civil War Centennial, stated that Illinois might have received the

Centennial but those states are now asking for it and we are not going to let

it go. We should be able to have the Centennial and we should be able to

have the 100 years of our country's independence.

more than any other state.

Commission member Robert L. Williams, of the Springfield Board of

Education, said yesterday that he would be in charge of the Centennial in 1951.

The commission's report to the legislature will be submitted by January 15.

Patton today said the commission will also report on the Centennial to

"points of the Civil War" in Illinois, to compile a bibliography of the

war, to collect Illinois veterans' and to collect letters and

photographs and other material of importance to the Centennial. He said

the advisory council will be created to assist the Commission.

RELEASE: IMMEDIATE

CARBONDALE, ILL., Jan. -- Thirty-six year old Grant Johannesen, up-and-coming American pianist, will perform here Friday (Jan. 22) as the Carbondale Community Concert Association's second attraction of the season.

The concert, to begin at 8 p.m. in Shryock Auditorium, will be open to local Community Concert members and to SIU students who have applied in advance for admission. Under a new seating system, CCA members will be admitted first, with remaining seats then going to students. An overflow throng at the group's first concert of the season last November found some ticket-holding members seatless for an appearance of the Obernkirchen Childrens Choir.

Johannesen, American born and trained, made his debut in New York in 1944 and in 1949 won the International Piano Competition over 52 pianists from 38 other nations. He has concertized since in the U. S., Europe and South America, and is noted for studious musicianship and meticulous programming free of the more hackneyed concert literature.

For his Carbondale concert, Johannesen will play Cesar Francks's "Prelude, Chorale and Fugue"; Beethoven's "Sonata in C Minor, Opus 10, No. 1"; Chopin's "Ballade No. 4, in F Minor, Opus 52"; Debussy's "Children's Corner" and the thundering "Sonata No. 7, Opus 83" by Prokofieff.

Release: IMMEDIATE

CARBONDALE, ILL., Jan. -- Dr. Carroll Riley, Southern Illinois University assistant professor of anthropology, has received a \$4,000 grant from the U. S. Public Health Service to further his study of medical-religious practices among the Tepehuan Indians. Most of the field research will be carried on among the Tepehuans in northern Mexico during 1960, he says.

Riley will study native religious practices concerned with healing, especially ritualistic ceremonies which often continue for several days. He will continue his earlier study of the herbs used and will probe the mental health and psychological implications of the practices. Under an earlier research grant he spent part of 1958 among the Tepehuan Indians, gathering samples of their curing herbs and studying native customs.

Under the new grant, which is for the year beginning May 1, Riley will combine field work with an analysis of the relationship of the Tepehuan practices with similar ritualistic healing ceremonies among other Indian groups to the northwest in Mexico and southwestern United States. He expects to do about three months of field work among the Tepehuans next summer or fall, and will have one or two graduate students in the field for an additional three months.

Involved in the Tepehuan practices is a strong nativistic movement in which there is a revolt against modern influences and an attempt to return to the old native ways of living, Riley says. He will continue his study of this movement.

Riley recently was asked to write a section on the southern Tepehuan and the Tepecano Indians of Mexico for the "Handbook of Middle American Indians," planned for future publication by the U. S. government.

CARBONDALE, Ill., Jan. -- Dr. Garret Riley, Southern Illinois University assistant professor of anthropology, has received a \$4,000 grant from the U. S. Public Health Service to further his study of medical-religious practices among the Tzotzil Indians. Most of the field research will be carried on among the Tzotzil in northern Mexico during 1950, he says.

Riley will study native religious practices connected with healing, especially ritualistic ceremonies which often continue for several days. He will continue his earlier study of the herbs used and will probe the mental health and psychological implications of the practices. Under an earlier research grant he spent part of 1948 among the Tzotzil Indians, gathering samples of their curing herbs and studying native customs.

Under the new grant, which is for the year beginning May 1, Riley will combine field work with an analysis of the relationship of the Tzotzil practices with similar ritualistic healing ceremonies among other Indian groups in the northwest in Mexico and southwestern United States. He expects to do about three months of field work among the Tzotzil next summer or fall, and will have one or two graduate students in the field for an additional three months.

Involved in the Tzotzil practices is a strong nationalist movement in which there is a revolt against modern influences and an attempt to return to the old native ways of living, Riley says. He will continue his study of this movement.

Riley recently was asked to write a section on the southern Tzotzil and the Tzotzil Indians of Mexico for the "Handbook of Middle American Indians," planned for future publication by the U. S. Government.

EDITORS: NOTE LOCAL NAMES

CARBONDALE, ILL., Jan. -- Subjects ranging from "World Citizenship" to "The College Student and How He Gets His Religion" will be discussed in a week-long religious program at Southern Illinois University Jan. 24-29.

The annual Religion in Life Week gets under way Sunday, (Jan. 24) with students attending the churches of their choice. Theme of the week, planned by the Inter-Faith Council of students, is "A Dynamic Faith in a World of Crisis."

A talk on "World Citizenship" by Bela Ige at 8:30 p.m. Monday (Jan. 25) in Morris Library Auditorium opens the week's planned discussions, all open to the public.

Other topics to be discussed during the week are: "The Love of God on Wednesday Morning", Dr. Paul H. Elmen, Chicago, 7:30 p.m. Browne Auditorium, and "Is Christianity Intellectually Respectable?", Rev. Robert Levell, 9 p.m. Browne Auditorium, Tuesday (Jan. 26).

Wednesday: "The College Student and How He Gets His Religion", Rabbi Robert Jacobs, Hillel Foundation, Washington University, St. Louis, 7 p.m. Library Auditorium, and "Religious Beliefs and Intellectual Development", Rev. Cletus Hentschel, Newman Foundation, SIU, 8:30 p.m., Library Auditorium.

Thursday: "The Problem of World Community", Henry Wieman, SIU philosophy department, 8:30 p.m., Library Auditorium.

Friday: "Dynamic Faith in a World of Crisis", Dr. Godfrey Sperling, chief of the midwest news bureau for the Christian Science Monitor, Chicago, 8 p.m., Agriculture Building seminar room.

In addition to the scheduled talks, various discussions will be held in dormitories, to be led by faculty members and area religious leaders. These talks will range from topics such as "Religion and Higher Education" to "The Part of Religion in Integration".

The student Interfaith Council which planned the event is composed of: Ron Nagel, Elmhurst, Student Christian Foundation; Jerry Meyer, (607 W. Grand) Carbondale, Wesley Foundation; Kay Davis, Towson, Md., Christian Science; John Daree, Canterbury; Nancy Barnes, St. Elmo, Unitarian; Ali Shukair, Jordan, Unitarian; Ada Mae Yardley, Carlyle, Gamma Delta; Barbara Beaty, Benton, Baptist; Gloria Nave, Carlyle, Wesley; John Orr, Albion, Student Christian Foundation.

of Student and how he felt. His Religion will be discussed in a week-long

program at Southern Illinois University Jan. 24-25.

Annual Convention Life gets underway Sunday, (Jan. 24) with

the annual convention. The theme of the week, planned by

the annual convention, is "A Dynamic Faith in a World of Crisis."

LEXINGTON, KY., Jan. -- Two books in the 1959 fall series published by the Southern Illinois University Press are among the 23 winning entries in the Fourth Midwestern Book Competition, according to an announcement by Lawrence S. Thompson, Lexington, Ky., chairman of the Midwestern Book committee.

The SIU Press has won an award in each of the three years it has entered this competitive show, says Vernon Sternberg, SIU Press director. The 1959 winning entries are: "Benjamin West and the Taste of His Times," by Grose Evans, and "University Portrait: Nine Paintings," by Mrs. Carolyn Gassen Plochmann. Mrs. Plochmann's portfolio of paintings was issued as a companion book to "Ordeal of Southern Illinois University," written by her husband, Dr. G. K. Plochmann, SIU associate professor of philosophy.

The Midwestern book show is held at the University of Kentucky library. Winning entries, selected on the basis of production, typography, and design, will comprise a traveling exhibit which will be shown throughout the midwest.

Mrs. Plochmann's portfolio of paintings was issued as a companion book to "Ordeal of Southern Illinois University," written by her husband, Dr. G. K. Plochmann, SIU associate professor of philosophy.

The Midwestern book show is held at the University of Kentucky library. Winning entries, selected on the basis of production, typography, and design, will comprise a traveling exhibit which will be shown throughout the midwest.

CARBONDALE, ILL., Jan. -- Plans for the sixth annual School of Advanced Cosmetology at Southern Illinois University -- first of its kind in the world -- were announced today by Harry B. Bauernfeind, assistant dean of the Division of Technical and Adult Education.

The school, open only to cosmetologists with licensed practical experience, will be held from July 24 to Aug. 6, and is sponsored by the Illinois Hairdressers and Cosmetologists Association in cooperation with SIU.

"Many hours are spent working with hair swatches and live models, giving cosmetologists actual experience so they may apply the scientific knowledge gained in the school to their profession," Bauernfeind said.

Enrollees will have laboratory sessions in hair shaping, hairstyling, haircoloring, color mixing, shampoo chemistry and physics of hair.

The faculty for the school will include Charles Budas and Louis Schmidt, hairstyling and hairdressing; Dr. Edward J. Murphy, cosmetic chemist; Dr. Robert Wallace, specialist in speech and semantics; Walter Elder, SIU co-ordinator of retailing, Dr. Willis Moore, SIU professor of logic, and Dr. William Westberg, SIU professor of psychology.

CARBONDALE, ILL., Jan. -- Dr. Alex Reed, chairman of the animal industries department in the Southern Illinois University School of Agriculture, will speak on "The Future of Dairying in Southern Illinois" next Thursday (Jan 28) at a district meeting of the Southern Illinois Breeding Association. The program will begin at 10 a.m. in Muckelroy Auditorium of the SIU Agriculture Building.

The district includes Franklin, Williamson, Johnson, Massac, Pulaski, Alexander, Union, Jackson, and Pope Counties. County chairmen will be elected for Franklin, Williamson, and Jackson Counties, and unit chairmen for the Metropolis and Mounds areas.

Those present will be taken on a tour of the SIU Dairy Center and test farms in the afternoon.

Others on the program will be W. E. Keepper, dean of the SIU School of Agriculture, and Henry Soborg, SIBA Manager.

ATTENTION: FARM EDITORS

SIU COUNTRY COLUMN

By Albert Meyer

Today's up-and-coming farmer is what economists call "capital hungry" because he needs a lot of financing to be able to do the volume of business necessary to make a good living. That is the idea quite prominent in discussion at a Farm Credit Workshop sponsored at Southern Illinois University last week by the agricultural industries department.

Talking about present problems in farm business arrangements and the changes being made to meet them was Forest L. Goetsch of the Doane Agricultural Service, St. Louis, a commercial farm management firm. He pointed out that costs are going up in farming. Competition is keen, forcing down the profit per bushel or pound produced and requiring farmers to become more efficient in production. Specialists are more common. Capital needs are getting beyond the reach of most young farmers because it is not uncommon today for an Illinois farmer to have control of \$100,000 in capital investment besides his operating capital.

Even as late as the 1940s nearly 90 percent of the farmers started out with money they saved, and expanded operations with what they accumulated from earnings. By the mid-1950s this percentage had dropped to 67 and Goetsch thinks there has been a further decline since.

It is nearly impossible for a young man to start a family and save enough as a hired hand on the farm or in industry to get enough equity to obtain from commercial sources the capital needed to start farming. Today's farmers must get control of large amounts of capital but they need not own it. They can become "farm managers" of money and production inputs which may come from a variety of sources, managing these in a way that will return the most possible profit from their use.

If collateral is available they may obtain operating capital from banks and Production Credit Associations. Real estate loans may come from several sources. Gaining more attention today are extended loans from parents with resources, or father-son partnerships in the farm business. Clear understandings and written agreements should be arranged. Incorporating the farm business is another arrangement getting increased attention. In some farm enterprises, contract farming is practiced widely. All are ways to get capital for modern farming.

SPORTS

CARBONDALE, ILL., Jan. -- Gene Baker, Pittsburgh Pirate infielder, Thursday began a battery of tests on his injured left knee at Southern Illinois University's Physical Education Research Laboratory.

Baker, 32, will be tested for three weeks in an effort to determine a program of exercises to help strengthen the knee. The Buc gloveman, who broke into the majors with the Chicago Cubs in 1953, injured the leg in St. Louis during the latter part of the 1958 season.

The tests will be conducted by Dr. Jay A. Bender, director of the research lab, and Robert Spackman, SIU athletic trainer and physical therapist.

CARBONDALE, Ill., Jan.-- High school debate teams from DuQuoin and Assumption of East St. Louis will defend titles in the annual High School Debate Tournament at Southern Illinois University Saturday (Jan. 23).

M. Jack Parker, SIU debate coach and director of the tournament, said some 60 prep debaters from seven invited schools will participate in the event. They will compete in two divisions--one for experienced and novice debaters--and will be going for first-place trophies to be awarded the top negative and affirmative teams. Awards will also be given to the two outstanding individual debaters.

The first round of debate will get underway at 10 a.m. in University School. Subsequent rounds will begin at 11:30 a.m., 2 p.m. and 3:30 p.m. Awards will be presented in a 5 p.m. ceremony at the University School Studio Theater with Dr. Ralph Micken, chairman of the speech department, presiding. All debates will be open to the public.

Other schools entered are University School, Granite City, Benton, Belleville and Harrisburg.

CARBONDALE, ILL., Jan. -- Nominations are being accepted for the 1960 Elijah Parish Lovejoy award, an annual recognition of a weekly newspaper editor for courage in journalism bestowed by Southern Illinois University's journalism department.

The award, to be presented the week of July 17 at the Conference of Weekly Newspaper Editors at SIU, will go to a weekly editor selected for outstanding editorial service in the year 1959 "involving courageous performance of duty in the face of economic, political, or social pressures brought against him by members of his own community," according to Dr. Howard R. Long, chairman.

Purpose of the award, says Long, is to "encourage outspoken, but responsible participation in local issues and controversies and to give credit where credit is due for constructive editorial leadership under conditions more rewarding to silence than to the forthright printing of the facts."

The 1959 Lovejoy award went to John F. Wells, editor of the Arkansas Recorder at Little Rock. Wells was largely responsible for a Congressional investigation into an Arkansas election. Wells had charged a "conspiracy" by the state administration coupled with numerous voting irregularities.

Nominations may be submitted in writing by one personally familiar with the circumstances of the editor's outstanding service. They must be received at SIU on or before March 31.

CARBONDALE, Ill., Jan.-- Southern Illinois University is now the second largest institution of higher education in the state and ranks 41st in the nation in terms of full-time student enrollment.

Analysis of the annual Walters Report of nationwide college enrollment trends, published in "School and Society" magazine, shows that SIU has passed Northwestern University in full time enrollment (8,248 to 8,107) to rank second statewide only to the University of Illinois. SIU's full-time enrollment ranking of 41st in the nation is a jump of four places over its 1958 position.

In terms of total enrollment, which includes students taking only night, Saturday and extension courses, SIU is third in the state (behind Illinois and Northwestern) and 44th in the U. S.

The Walters Report shows that SIU's meteoric enrollment climb has pushed it ahead of such institutions as the State University of Iowa, the University of Kansas, Cornell University, the University of Utah, Florida State University, Brigham Young and the University of Kentucky in total registration. SIU is barely outranked in total students by the Universities of Miami, Arizona, Oklahoma and Harvard.

Southern's 7.6 percent total enrollment increase in the past year compares to a nationwide jump of 3.6 percent. The full-time student enrollment at SIU climbed by 7.8 percent from the 1958 fall quarter to fall of '59, compared to an even 4 percent increase across the nation.

EDITORS: Note local names

CARBONDALE, ILL., Jan. -- An all-state team of composers will gather at Southern Illinois University next month for a musical symposium that will showcase their own original work.

A group of 20 composers, including such names as Leo Sowerby and Karl Jirak, will participate in a day-long series of performances and critiques to be headed by Ingolf Dahl, composer, pianist and conductor at the University of California. The Illinois Composers Symposium will be a major event on SIU's fifth annual Fine Arts Festival calendar.

Will Gay Bottje, SIU faculty composer who has arranged the program, said new works by the invited composers will be played in three separate concerts during the day. Music for chamber groups, voice and band will be performed at 9 a.m. in Shryock Auditorium. Organ, woodwind quintet and string quartet compositions will be played at 1:30 p.m. in Carbondale's First Methodist Church and a final concert at 8 p.m. in Morris Library Auditorium will be devoted to chamber music.

Dahl, 48-year old Swedish-born composer who has worked in many musical fields since going to California in 1938, will speak on "Quality Judgments in Contemporary Music" at 3:30 p.m. in Morris Library Auditorium.

The Oxford String Quartet, professional chamber ensemble from Miami (O.) University, will be a guest performing group during the Symposium. Most of the works will be presented by SIU musicians, including the Faculty Woodwind Quintet and various soloists.

The roster of participating composers includes well known teachers and resident musicians at a number of conservatories, colleges and universities in the state. Sowerby from the American Conservatory is a noted composer of organ music. Jirak at Chicago Musical College, has been an active composer for many years.

ATTENTION: FARM EDITORS

CARBONDALE, ILL., Jan. -- With swine production becoming more specialized and complex, hog farmers in the future may save a lot of head scratching, calculating, and confusion with a simple gadget, called a management Swine-O-Meter, a recent brainstorm of Dr. Joseph E. Burnside, Southern Illinois University swine specialist.

The instrument is being patented by the SIU Foundation, a non-profit corporation receiving and administering gifts for the benefit of the University. Kenneth R. Miller, executive director of the Foundation, says conferences are underway with a number of firms showing an interest in the Swine-O-Meter and that the Foundation plans to offer exclusive contracts for the instrument to an individual concern in each of three fields -- farm equipment, feed, and textbook publishing. A packet of swine management materials will be offered with the Swine-O-Meter, Miller says. Income derived from the invention will be shared by the Foundation and the SIU animal industries department, the latter portion being used to further swine research.

Burnside says the device is a type of circular slide rule adapted to the needs of modern swine production, and will be especially valuable to those producers who follow an early weaning-multiple farrowing system. By setting a rotating disc, calibrated in days and months, to the hog breeding date all other dates for production and management practices are shown at one setting. These include the scheduling of such multiple farrowing practices as breeding, weaning, vaccinating, castrating, and marketing. The other face of the Swine-O-Meter provides in condensed form suggested recommendations and information on swine housing and management as well as a calculating device for converting pig weaning and market weights to the standard 56 and 180 day weights.

m o r e

The invention resulted from a swine management calendar which Burnside worked out nearly two years ago for the multiple farrowing program used at the SIU Swine Center. The system involved rearranging the regular calendar into time intervals important to various management and production practices. Converting the information to a preliminary model of the new invention was assigned by Burnside as a special class problem to Dayton Thomas, Carbondale, SIU student majoring in animal industries. Burnside currently is doing research on a number of other projects concerned with swine production and management.

A native of Tampa, Fla., he has been on the SIU faculty since 1955, teaching and supervising swine research in the SIU School of Agriculture's animal industries department headed by Dr. Alex Reed. Burnside received his doctorate in animal nutrition from the University of Wisconsin and served for three years as a livestock toxicologist at the Georgia Coastal Plain Experiment Station, Tifton, Ga., before coming to SIU.

Number 334 in a weekly series -- "It Happened in Southern Illinois"--a series consisting of regional folklore and historical accounts suitable for feature, column, or editorial use.

AN ECHO OF OLD CHRISTMAS
John W. Allen
Southern Illinois University

Those who came from foreign lands and from other sections of our own to settle in southern Illinois brought their customs and lore with them. One practice coming with the early French was La Guiannee, a jolly greeting given to each New Year at Prairie du Rocher in Randolph County. A second, from Germany this time, was Old Christmas with its "Three Kings" song. This is celebrated each January 6 in the Teutopolis region of Effingham County.

Each of these, really observed on the eve of the day honored, has its centuries old history. Each is as firmly established in Illinois. Neither has been "modernized" and thus both remain distinctly folk practices.

La Guiannee came to the Kaskaskia-Cahokia region with the French in the early 1700s. Three Kings, already a feature of Old Christmas in Germany, began to be formally observed in Illinois shortly after the concentrated German-Catholic settlement was begun near Teutopolis.

Its present dramatized version was started here by Benjamin Voss who came directly from Germany to Illinois about 100 years ago. The door-to-door visit of Three Kings immediately became the most prominent feature of the Old Christmas observance among the German settlers. Both the German text and its English translation are credited to Voss.

The song is a narrative poem that tells of the journey of the Three Wise Men.

RECEIVED: IMMEDIATE

Number 334 in a series of books -- "The History of Southern Illinois" -- a series
consisting of regional, historical and geographical studies of the region,
columns, or editorial notes.

AN ECHO OF OLD CHRISTMAS

John W. Allen

Southern Illinois University

Those who come from foreign lands and to whom the traditions of our own
people in Southern Illinois brought their customs and lore with them. The
practice coming with the early French and the Germans, a truly Germanic
to come New Year at Paris and to be in the hands of the French. A German
Germany this time, was the Christmas spirit. "The Christmas song. This is
celebrated each January 6 in the French and the region of Champagne.
Each of these, really observed on the eve of the day, but the
centuries and history. Each is a family tradition in Illinois. The French has been
"modernized" and it is both a family tradition and history.
The Christmas came to the West from the French in the
early 1700s. Three times already a century of Christmas in Germany
began to be family observed in Illinois shortly after the concentrated German-
Catholic settlement was begun near Tiptonville.
The present French version was started here by Benjamin Voss who came
directly from Germany to Illinois about 180 years ago. The door-to-door visit
of these Kings immediately became the most prominent feature of the Old
Christmas observance among the German settlers. Both the German text and
the English translation are printed in Voss
This song is a narrative poem that tells of the journey of the Three Kings.

One of these was Melchior, the smallish King of Nubia, who came bearing gifts of gold to represent wealth. With him came Balthasar, middle-sized King of Chaldea who brought gifts of frankincense, which is burned for its pleasing odor. Frankincense was considered emblematic of the common man. Jasper, King of Tarsus or Tarshia, largest and most impressive of the three in stature, brought myrrh, used in incense and in perfume. It was considered emblematic of man's humility.

During the enactment at Teutopolis a strong staff to represent divine support and strength is carried by Balthasar. Jasper carries a broom to sweep away trouble and misfortune. All are impressively robed and bedecked for the occasion. Their robes, made by a local woman, are carefully laundered after each use and made ready for the next time.

Though the Teutopolis area is about as concentratedly Catholic a community as one can find in America, calls made by the singers and their accordionist are not restricted. The Lutheran minister invites and welcomes them, as do others.

As the place of call--a home, a hospital, the priest's house, the Sisters home, the lodging place of the infirm, or even a tavern--is approached, the accordion strikes up the air of the song. Someone opens the door and welcomes the troupe.

One looking on at any place of call notes a respectful silence, even in a tavern, when the musicians enter. It is a strange feeling that one has in a tavern where walls are adorned with beer signs, pictures of pin-up girls, hunting scenes, arty calendars, pictures of sports events and noted athletes. Somehow all of these seem to fade into the background and become insignificant. Each singer in turn announces the name of the king he represents. The seated musician starts playing and the song is begun.

Where children are present the general expression of reverent awe is evident.

The middle-aged give pleased relaxed attention. On older faces one sees a look of wistful remembering. Many an oldster will be seen making almost imperceptible movements in rhythm with the music, or moving lips silently as if to form words. Occasionally a less restrained older person may audibly join in the song. In one case so many did this that it became a chorus.

The Three Kings song tells of the Wise Men's journey of 13 days in which they traveled 400 miles. It tells of the star that had guided them until it had stopped over the crib of the infant Jesus. To represent this guiding star, a staff with a rotating one mounted on it is carried by one of the kings in the enactment. At the manger its rotation is stopped and it rests just as the guiding star did above the place where the Christ child lay. Its stopping represents the end of their journey.

The robed singers then kneel and extend their hands as if to present the gifts they have brought. After a slight pause, the remaining portion of the song that extends greeting of the season and invokes blessings is sung and a calm happiness seems to settle on the gathering.

The song is very old. The earliest record found indicates its use in Germany in 1072. Later records and references show increased observances. Three Kings is sung in German, just as La Guiannee is in French. This often baffles outsiders and youngsters only casually acquainted with those languages. The song has about a dozen stanzas. It begins with, "We three kings of the Orient are, Shown the way by light of God's star." It goes on to tell that they have come, "Unto the village of Bethlehem, which lies close to Jerusalem." Nearing the very end it says, "We'll write these words above the door, God bless all here forever more." Finished, they depart with the Nubian King sweeping "all bad luck beneath your steps."

Throughout it all there is enough solemnity to make it impressive, and enough calm cheer to lend joy. Old people in whose childhood Three Kings was a prominent Christmas song look forward to the annual appearance of the group.

The singers, Andy Doedtman, Ralph Overbeck and Bill Roepking--along with accordionist Cliff Grunloh--are to be commended for the impressive way in which they enact the ritual. Appreciation also should go to Dr. Weber, the Teutopolis dentist, who has faithfully promoted this unique observance of Three Kings for many years.

Old customs like La Guiannee and Three Kings surely add distinction to their communities and give increased pleasure to those so fortunate as to hear them. They should not be allowed to die. -30-

The middle-aged give them a warm welcome. On other faces one sees a look

of distant responsibility. Many an officer will be seen making himself responsible

movements in rhythm with the music, or moving the body as it is

work. Occasionally a few of the older persons may suddenly join in the song.

It is one of many things that it becomes a habit.

The Three Kings song tells of the Wise Men's journey of 12 days in which they

traveled 600 miles. It tells of the star that guided them until it had stopped

over the crib of the infant Jesus. To represent this guiding star, a staff with a

rotating one mounted on it is carried by one of the boys in the enactment. At the

moment the rotation is stopped and it rests just as the guiding star did above the

place where the Christ child lay. In singing represents the end of their journey.

The boys singers then kneel and stretch their hands as if to present the gifts

they have brought. After a slight pause, the remaining portion of the song that

extends generally of the season and involves that song and a short dialogue

seems to follow on the gathering.

The song is very old. The earliest record found indicates it was in German

in 1072. Later records and references show increased popularity. There is

is sung in German, just as the Christmas is in French. This song has been

and younger are only casually acquainted with these languages. The song has also

a dozen verses. It begins with, "We three kings of the Orient are, Crown the King

by birth of God's son." It goes on to tell that they have come, "Bring the gifts

of Incense, which we offer to Jesus Christ, King of the Jews." Moving the very end is

"We'll write these words above the door, That these all have forever more."

Finally, they depart with the Russian song, "All hail to thee, O Virgin Mary."

There.

Throughout it all there is enough solemnity to make it impressive, and enough

color to be of interest. Old people in these churches have known it a

profound Christmas song look forward to the annual appearance of the group.

The singers, Andy Debusch, Ralph Overbeck and Bill Debusch, along with

accompanist Bill Grunwald are to be commended for the intensive way in

which they enact the thing. Appreciation also should go to Dr. White, the

Temple's director, who has faithfully promoted this unique observance of the

Kindergarten.

Old customs like the Christmas and Three Kings carry old traditions to their

communities and give interest and pleasure to those so fortunate as to hear them.

They should not be allowed to die.

CARBONDALE, ILL., Jan. -- The coordinator of planning and urban renewal at Mishawaka, Ind., has been added to the program for a housing workshop to be held on the Southern Illinois University campus Thursday (Jan. 28).

Frederick G. Cecchi, who has also been building commissioner in the community of 35,000 near South Bend for 10 years, has had wide experience in the enforcement of housing codes and urban renewal.

The Housing-Hygiene Workshop was planned in response to area interest in housing improvement, according to Robert E. Knittel, director of SIU's department of community development, who will open the program at 9 a.m. in the Agriculture Building seminar room.

Technical skills, financial aid, legal powers, administrative machinery, and experienced personnel are included as topics for talks and discussion.

Other speakers will be Thad Patrick of the U. S. Public Health Service; Sherwood Pine, Chicago, assistant regional director of the Urban Renewal Administration; J. Russell Scott, general counsel of the Illinois State Housing Board, and City Planner Frank A. Kirk of SIU.

Civic officials and business leaders attending the conference will get a chance to exchange ideas with leaders of communities in the area which have already initiated housing improvement programs.

Registration will be at the door. The registration fee is \$1.

RE: HOSIERY

CARBONDALE, ILL., Jan. 25 -- The completion of planning and design work for the Hosiery Institute, Inc., has been added to the program for a hosiery workshop to be held at the Southern Illinois University campus Tuesday (Jan. 31).
Frederick C. G. Smith, who has also been building connections to the workshop, is expected to arrive here for 10 weeks. He has also experience in the workshop of hosiery codes and union matters.

The Hosiery Institute Workshop was planned in response to the interest in hosiery development, according to Robert E. Hallett, director of Illinois Department of Community Development, who will run the program as a part of the Institute's hosiery summer course.

Technical skills, financial aid, legal matters, statistical methods, and experimental personnel are included as topics for study and discussion.

Other speakers will be Fred Hallett of the U. S. Public Health Service, Richard H. Hallett, assistant regional director of the Illinois Department of Community Development, J. Francis Scott, general counsel of the Illinois State Board of Health, and City Engineer Frank A. Hill of CHS.

State officials and business leaders are expected to attend the workshop with a view to exchange ideas with leaders of communities in the area which have already initiated hosiery development programs.
Registration will be at one dollar. The application fee is \$5.

CARBONDALE, ILL., Jan. -- Russian drama, in the pre-state controlled style of Anton Chekhov, will furnish the vehicle of the Canadian Players when they return to Carbondale with "The Cherry Orchard" for their sixth annual preformance sponsored by Southern Illinois University.

Curtain time for the free preformance will be 8 p.m. Thursday (Jan. 28) in Shyroock Auditorium. "The Cherry Orchard" is Chekhov's last play written before his death and is one he considered a comedy. By current standards, however, it is basically a drama with a few flashes of humor.

Starring in the drama will be Max Helpmann who has previously appeared with the Players here. Helpmann has had a varied theater career playing with such notables as Yul Brynner, Sr. Laurence Olivier and Vivien Leigh. After a stint with the Old Vic in England, he returned to Canada in 1953 to settle permanently.

Considered to be one of the most valued and popular players with the Stratford Festival, he has toured with the Canadian Players on three previous occasions, last appearing in the role of Petruccio in the "Taming of the Shrew".

CARBONDALE, ILL., Jan. -- Pedro Armillas, visiting lecturer and curator at the University of Michigan Museum of Anthropology, was named associate professor of anthropology in the Southern Illinois University Museum by the SIU Board of Trustees Friday (Jan. 22). The appointment will be effective July 1.

Armillas is considered an outstanding scholar in the field of MesoAmerican (Mexican and Latin American) archaeology. Before going to the University of Michigan last year, he served UNESCO's Division of Monuments and Museums for three years as an expert on archaeological sites in Ecuador and Peru.

Much of his professional career has been in Mexico where he was professor of archaeology and ethnology at the National School of Anthropology in Mexico City for six years. He also has been on the faculty of Mexico City College, has lectured at Bowdoin (Maine) College, and has held several fellowships, including one from the J. S. Guggenheim Memorial Foundation. He is a native of San Sebastian, Spain, and a graduate of the University of Barcelona.

Armillas is the author of many articles for professional journals and has membership in a number of professional organizations, including the American Anthropological Association, the Society for American Archaeology, and Sociedad Mexicana de Anthropologia.

CARBONDALE, ILL., Jan. -- Harry T. Moore, professor of English at Southern Illinois University will speak to the Royal Society of Literature and other European literary groups during a trip abroad this summer.

Moore, a Fellow of the Royal Society of Literature, will address that group on the subject of the contemporary American novel, June 16 in London. Moore is one of the few Americans ever invited to speak to the RSL, whose members include W. Somerset Maugham, Graham Greene, Dame Edith Sitwell, Nicholas Monsarratt, Sir Winston Churchill and other British writers. The president is R. A. (Rab) Butler, British Home Secretary.

Moore also will lecture at a D. H. Lawrence Exhibition scheduled for early summer at the University of Hottingham. The exhibition will commemorate the 75th anniversary of the novelists' birth. Moore is regarded as a leading authority on the life and works of Lawrence.

At the end of August, Moore will read a paper on prose style before the Eighth Congress of the International Federation for Modern Languages and Literatures at Liege, Belgium.

THE WEEK IN SPORTS AT SIU:

Gymnastics -- Jan. 29 University of Michigan, here (7:30 p.m.)
Swinning -- Jan. 29-30 at the Central AAU, Chicago
Wrestling -- Jan. 30 at Northwestern

CARBONDALE, ILL., Jan. -- Perched precariously atop the Interstate Conference in a deadlock with Northern Illinois, Southern Illinois University's cagers take a two-week breather before returning to action Feb. 5 at Eastern Illinois.

The Salukis shoved their way into the tie with wins last weekend over Illinois State Normal, 90-86, and Western Illinois, 96-84, to run their IIAC record to 5-1 (12-5 for the year). Northern, also 5-1, knotted the lead by coming back with an 83-68 win over Eastern Michigan after falling to Central Michigan, 69-66, in overtime the night before.

The remainder of the league shows Western Illinois in second with 4-1, Eastern Illinois 2-3, Illinois State 2-4, Central Michigan 2-5 and Eastern Michigan 1-6.

Charlie Vaughn continues to be bad news to Saluki foes. Big Charlie, switched to guard for the last two games by Coach Harry Gallatin, has netted 451 points in 17 games for a 26.5 average. He also leads in rebounds with an average of 10.8 per game.

Don Hepler tightened his grip on second place with 45 points over the weekend to run his total to 206 points. He is followed by Tom McGreal with 180 and Jim Gualdoni with 152. Randy McClary edged Capt. Dick Ruggles out of the top five with a 27-point spurt for a 105 total. Ruggles now has missed three games since injuring his ankle against Eastern Illinois Jan. 14.

Wrestling -- Jan. 22-23 at the University of Illinois, Urbana
Wrestling -- Jan. 30 at Northwestern

CARBONDALE, Ill., Jan. 22 -- Reached previously from the University of Illinois

in a deadlock with Western Illinois, Southern Illinois University's campus take

a two-week break before returning to action Feb. 2 at Eastern Illinois.

The schedule shows their way into the next week over Illinois

Green Hornet, 90-84, and Western Illinois, 95-84, to two other ILL. teams on Jan.

(11-2 for the year). Western, also 2-1, posted the first of coming back with

an 81-55 win over Eastern Michigan after falling to Central Michigan, 81-55, in

overcoming the night before.

The remainder of the league shows Western Illinois in second place, 1-1, Eastern

Illinois 2-2, Illinois State 2-2, Central Michigan 2-2 and Eastern Michigan 1-1.

Charles Vandenbergh, who has had more in school than the other players, is

to guard for the first two games by Coach Harry Gillette, who retired 437 points in

17 games for a 25.2 average. He also leads in rebounds with an average of 10.7

per game.

Don Miller, who played his first game in second place with 40 points, was the

to run his total to 100 points. He is followed by Tom McGraw with 130 and

Donald with 121. Randy McGraw, who played out of the top line with

a 37-point game for a 102 total. McGraw now has missed some games since returning

has this against Eastern Illinois Jan. 14.

CARBONDALE, ILL., Jan. -- Southern Illinois University's gymnasts get their home season off to a rousing start Friday (Jan. 29) against a strong University of Michigan team.

Coach Bill Meade's Salukis tuned up for the Wolverines last weekend, whipping Eastern Illinois, 81-31, for their fifth win in six starts. Last year Michigan, second in the Big 10 and fifth in the NCAA, dropped SIU, 64-48, at Ann Arbor.

Meet time in the SIU Men's Gym is 7:30 p.m. Admission is 75 cents for adults and 40 cents for children. SIU students are admitted on activity tickets.

* * * * *

CARBONDALE, ILL., Jan. -- Coach Jim Wilkinson will try to start a new win streak Saturday (Jan. 30) when he pits his Southern Illinois University wrestlers against Northwestern at Evanston.

The Salukis, who had a 23-match streak ruined at Oklahoma State (31 - 3) earlier this season, started a new string last weekend, gunning undermanned Ritenour YMCA of St. Louis 31 - 2, at Carbondale. Ritenour, perennial Ozark AAU power, was able to gain only a tie at 167-pounds against Southern. SIU is now 2 - 1 for the season.

Last year Southern's defending Interstate Conference champs smothered Northwestern's Big 10 entry, 23 - 3, also at Evanston. The Salukis return home Feb. 3 for a dual bout with Eastern Michigan.

* * * * *

CARBONDALE, ILL., Jan.-- Southern Illinois University's swimmers travel to Chicago Friday and Saturday (Jan. 29 - 30) to defend their Central AAU title.

Coach Ralph Casey's Salukis, 2 - 1 for the season, set three records at the meet last year to edge North Central College, 70 - 68, for the team title. Southern will be led by Capt. Bert Rumpel, Walt Rodgers, Ray Padovan and Ron Ballatore, all of whom have broken one or more SIU records this season.

CARBONDALE, ILL., Jan. -- Chamber music by three modern American composers will provide the program for the Eastman String Quartet in a performance here Sunday (Jan. 31) officially opening Southern Illinois University's fifth annual Fine Arts Festival.

The noted ensemble from the Eastman School of Music faculty is but one of several distinguished attractions scheduled during a three-week public Festival in which "America and the Arts" will be viewed through music, the dance, painting, crafts, design, sculpture, and drama.

Sunday's 3 p.m. program in Shryock Auditorium will open with an address by SIU President Delyte W. Morris. The Quartet will play William Bergsma's "String Quartette No. 2," Walter Piston's "String Quartet No. 1," and Gardner Read's "String Quartet No. 1, Opus 100."

A tea at 4:15 p.m. in the Allyn Gallery will mark the opening of four Festival exhibitions. A show of drawings by New York Abstractionist Paul Burlin, who will be a visiting professor at SIU this spring, will open in Allyn Gallery along with "Some Younger American Painters," a representative collection of paintings now touring the U. S. under sponsorship of the American Federation of Arts.

An SIU-originated exhibit, "Contemporary American Crafts," will go on display in the University Museum at the same time. Collected from all over the nation by Ceramist Nicholas Vergette, Weaver Lysbeth Wallace and Silversmith Frederick Lauritzen of the SIU faculty, the show will include current examples of work being done by American craftsmen in pottery, jewelry, metalwork and weaving.

"Printing for Commerce" and "50 Ads of the Year," a combination exhibit arranged by the American Institute of Graphic Arts in New York, will open in Morris Library. Comprised of award-winning work by U. S. visual designers, the show will come to Southern from its last stop in Pittsburg.

(m o r e)

COMMUNIST, JULY, 1941 - Chamber made by this person for the purpose of

will provide the program for the Eastman String Quartet in a performance here Sunday (Jan. 22) officially opening Southern Illinois University's 115th annual Wine Arts Festival.

The noted ensemble from the Mexican School of Arts faculty is the one of several distinguished exhibitions scheduled during a three-week public Festival in which "America and the Arts" will be viewed through music, the dance, painting, static design, sculpture, and drama.

Quarter No. 1, Walter Packer's "Early Quakers No. 1" and "Early Quakers No. 2" (Open 100).

For the first time in the history of the city, the opening of the
Festival exhibitions. A show of drawings by New York Abstract artists Paul

come to Southern from the West such as Pittsburgh.

The Eastman String Quartet -- Violinists Joseph Knitzer and John Celentano; Violist Francis Tursi and Cellist Georges Miquelle -- is professionally established both in the U. S. and Europe. Knitzer, who made his solo debut with the New York Philharmonic at the age of 14, has been soloist for the Cleveland Orchestra and guest performer with many other U. S. symphonies. He has been artist-teacher at Eastman since 1955.

Celentano, Concertmaster of the Eastman Chamber Orchestra, originated the Modern Art Quartet and has been artist-lecturer at Iowa State University as well as Eastman. Tursi, a member of the Quartet and professor of viola at Eastman for the past 10 years, has also performed as guest artist with the Curtis and Berkshire String Quartets. Miquelle, a native of France, toured the U. S. with Dame Nellie Melba and Tito Schipa as a youth and later appeared with such modern music pioneers as Ravel, Bartok, Honegger and Prokofieff in concerts of their own work.

A chamber music workshop, a four-man art symposium, a concert of modern dance and another design exhibit are events scheduled during the rest of the Festival's first week.

On Monday (Feb. 1) morning at 10 o'clock, the Eastman Quartet will be guest artists for a workshop in SIU's Altgeld Choir Room.

Artists Paul Burlin, Warren Brandt (SIU art department chairman) and Sidney Geist and St. Louis Post-Dispatch art critic George McCue will discuss the topic, "Where Will Amateurism in Art Lead Us?" in a symposium Tuesday at 8 p.m. in the Woody Hall Formal Lounge.

In a Wednesday (Feb. 3) night concert at 8 p.m. in Shryock Auditorium, the Merce Cunningham Dance Company of New York will exhibit its highly original concept of the dance which includes, among other things, multiple tape-recordings of background sound effects, the atonal, no-rhythm piano music of John Cage and the abstract dance patterns of the dancers themselves.

Saturday (Feb. 6) at 3 p.m., an exhibition assembled by Robert Hunter of SIU's design department will open in the Home Economics Building. Titled "Made in U.S.A: Good Design for \$1," the show will include well-designed utilitarian objects manufactured and distributed in the U. S. for sale at a dollar or less.

All Festival events are free to the public.

CARBONDALE, ILL., Jan. -- Total resident enrollment at Southern Illinois University for the winter quarter is 10,658 students, an increase of 1,218 over the same period a year ago.

The figure exceeds original estimates and is unusual in that it doesn't reflect the customary enrollment decline between fall and winter terms. Southern's record fall registration of 10,394 dropped by only 4.1 percent, compared to the usual 5.3 percent dip.

Alton-East St. Louis campus enrollment for winter totals 3,039, a decrease of only 310 from the fall quarter and more than 200 over the predicted count. The Carbondale campus figure, 7,619, exceeds last winter's tally by 545 students.

Notable enrollment gains were made by the senior class, up 20 percent overall since last winter, and Carbondale campus graduate students, whose ranks swelled by almost 17 percent from the 1959 winter term.

Other winter quarter totals not included in resident enrollment figures are 491 in extension classes, 3,797 registrations in adult non-credit courses since July 1, and 587 elementary and high school pupils at University School.

CARBONDALE, ILL., Jan. -- Prospects of the future in swine production will be the discussion topic at Southern Illinois University's third annual Swine Day Feb. 12, according to Dr. Joseph E. Burnside, SIU swine specialist.

Highlighting the program will be Dr. H. L. Self, Iowa State University (Ames) extension animal husbandryman who participated in SIU's first Swine Day program two years ago. Self, who is widely known as an authority on the physiology of swine reproduction, will discuss the implications of artificial insemination in the swine industry.

Albert Gehlbach, prominent Lincoln, Ill., swine producer, will call on personal experience to present his practical views on hog raising as a farm enterprise.

Wilbur L. Plager, Lafayette, Ind., secretary-treasurer of the American Yorkshire Club, a purebred swine organization, will discuss the work of progeny test stations and current progress in the development of meat-type hogs.

Swine Day sessions will be held in Muckelroy Auditorium of the SIU Agriculture Building under sponsorship of the animal industries department and the SIU Extension Division. Visitors also will tour new facilities at the School of Agriculture Swine Center for teaching and research.

CARBONDALE, ILL., Jan. -- High school seniors who act immediately can still take advantage of the American College Testing program that will be held Feb. 27, according to Jack Graham, co-ordinator of the Counseling and Testing Center of Southern Illinois University.

Southern is one of six Illinois state universities advising high school seniors to take the test which provides the student with much data about higher education and should assist him in making plans for college. Registration deadline is next Friday (Feb. 5) and application blanks are available in the office of high school principals or guidance directors.

Over 20,000 students took advantage of the tests the last time they were given. Southern Illinois test centers are Carbondale, Shyrock Auditorium; Mt. Vernon, Community College; Centralia, Junior College; Alton, SIU Residence Center; East St. Louis, SIU Residence Center, and Belleville, Junior College. Students outside these areas may determine the location of the nearest test center by asking their high school principal.

CARBONDALE, ILL., Jan. -- The Merce Cunningham Dance Company will be featured performers for a Wednesday (Feb. 3) program of the Fine Arts Festival of Southern Illinois University. Cunningham, with his company of four girls and two men, will begin the free performance with an 8 p.m. curtain in Shryock Auditorium on the Southern campus.

Accompanying the dance group will be John Cage as musical director and David Tudor as pianist. Cunningham is rated today as one of the finest male dancers that modern dance has produced. Added to the ability of the Cunningham dance troupe is the "prepared piano" of Cage and the unusual use of "sound and no-music" that Cage has built into a career.

On Tuesday (Feb. 2) Cunningham will give a free master lesson to any local or area dance students who have had previous instruction and are interested in contact with professionals in the field of modern dances. Lesson time will be 4 p.m. at the SIU Women's Gym. No pre-registration is required for the lesson.

An unusual feature of the modern dance program Wednesday will be the use of humor and zaniness of that both Cunningham and Cage interject into their work. Cage is said to have conquered completely untrodden territory of music with tape-recorded arrangements of such noises as zoos, subway trains, moving furniture, fog horns, bathwater, Bronx cheers and birds.

Both men practice "musique concrete" music in which magnetic tapes are used in exploiting and transforming natural sounds.

The program will include "Summerspace," a lyric dance, and "Rune" with the entire company; "Changeling," a solo by Cunningham, and the last number, "Antic Meets," a sequence arranged and written for the group by Cage.

Number 335 in a weekly series -- "It Happened in Southern Illinois" -- a series consisting of regional folklore and historical accounts suitable for feature, column, or editorial use.

AN ANCIENT EMBLEM BUT LITTLE NOTICED

John W. Allen

Southern Illinois University

The swastika is about as old as any emblem devised by man. It has been a prominent symbol for thousands of years and in many places over the world. It has been found in the remnants of ancient cultures on all the continents except Australia. Thus, it should not be altogether strange that this early form of the cross once more should come to notice.

This time it is being painted on walls and sidewalks at several places in Europe, and even in America. Along with it there often are anti-Semitic slogans like those which appeared during Hitler's rise.

The swastika is not a stranger in southern Illinois. During several hundred years -- just how many no one seems to know -- it has decorated rock walls and ledges at different places here. Despite the fact that these markings were here long before the coming of white men, comparatively few know their location or go to look at them.

The curious can visit and see swastikas and other Indian carvings, called petroglyphs, at two reasonably convenient places. One group that includes an assortment of markings is on the bluff at the west side of Big Hill a short way north of Trestle Hollow. These carvings can be visited on foot from a turnout at the top of the west bluff. The starting place for the tramp is reached over a gravel road that begins on Route 3 about a mile south of Gorham spur.

The second collection is about one-fourth mile east of Fountain Bluff, a bluff wall on the north end of Big Hill. Either group can be reached with reasonable effort and the going is not bad.

Just what do these petroglyphs represent? Who were the people who carved them? When? Why? How? Each of the groups contains assorted and strange emblems among which are recognizable outlines of hands, feet, arms and eyes. People with a fair amount of imagination can easily conjure up other parts of the human body as well as representations of birds, insects, reptiles and wild animals. There are other puzzling symbols and designs that undoubtedly were meant to tell their stories. All obviously were intended to record facts, express thoughts, or convey messages.

These carvings, like similar ones found at other places over America, are definitely the work of Indians. Living Indians, however, appear about as puzzled by them as do whites and often ascribe mysterious origins. Many meanings have been attached to the swastika. It has been considered the emblem of the sun, of the "new fire", of the four points of the compass, of the "wheel of life", and as a prayer wheel. In other countries it was the mark of the Buddha, of Apollo, of Thor or of Quetzalcoatl in Aztec mythology.

Those qualified to judge state that the Big Hill carvings were here when Columbus came to America. They evidently were carved by using harder stones for chisels. Near the carvings on the west side next to the Mississippi there are worn places where it appears that the Indians sharpened their tools.

The group of carvings at the north end of the hill are the most easily reached. Here one sees numerous circled crosses or designs that are swastikas. Then there are hands, an antlered deer, a wolf and assorted outlines of birds. Also there are queer geometrical outlines over which the visitor may puzzle. This spot may be visited by going southwest over the gravel road from the town of Gorham and following it to a point about 100 yards west of the place where it passes between two large masses of fallen rock.

In China, India, Japan and among some tribes of American Indians where ancient religious rituals still are practiced, the swastika has a solemn meaning. Medicine men in some of our Indian tribes even yet employ the old emblem in their rites.

In shape and proportion all swastikas are much alike. They are made of right angle crosses with the ends of the arms turned. Those glorified by Hitler had the arms bent clockwise. On Big Hill they are turned counterclockwise. These turns at the end of the arms are evidently remnants of an earlier circle that enclosed the cross. It is related that the direction of the bend in the arms of the cross came in China 1,000 years ago when they reversed the direction in which prayer wheels were rotated.

It is indeed a long way, both in time and space, from the ancient swastikas of China, India and old Egypt to those of our "Egypt." When one goes and looks at those carved here hundreds of years ago he wonders by what course they came out of the past to appear on the rock walls and ledges of southern Illinois.

SIU MASTER THESIS
REVEALS PROBLEM OF
LOCAL WATER SOURCES

CARBONDALE, ILL., Jan. -- Mushrooming growth of outlying suburbs in 17 southern Illinois counties are posing problems for municipal water departments, according to a study by Ronald E. Nelson, Farmersville, recent graduate of Southern Illinois University department of geography.

Good underground sources of water -- the most economical system for small communities-- are scarce except in the lowlands along the Mississippi and Ohio Rivers, and most communities must resort to the more costly means of developing surface sources of water, Nelson stated in his master's degree thesis.

Principal distribution problems include increased cost of distributions through service extensions, an insufficient community water supply to meet increased water demand, and the community's feeling of a first obligation for service to residents within corporate limits.

Nelson lists two groups of communities with suburban water facilities in his study--those with 200 or less service connections and those with more than 200 connections. There are 34 of the former, ranging in size from Campbell Hill with daily water pumpage of 3,500 gallons to Cairo with 1.5 million gallons daily.

The 13 municipalities with major suburban developments are Benton, Carbondale, Carterville, DuQuoin, Eldorado, Herrin, Marion, Murphysboro, Mt. Vernon, Rosiclare, Royalton, Sesser and West Frankfort. All but four provide water to one or more neighboring communities on a wholesale basis.

One practical way of extending service to suburban outlying areas, according to the Nelson study, is through the formation of water districts such as are successfully operating near Carbondale, Murphysboro and Mt. Vernon. Carbondale has the most widespread suburban water service facilities in southern Illinois, made possible through the creation of four water districts to serve settlements in each direction. Districts receive water on a wholesale basis from the city. More than 700 suburban users in Carbondale consume nearly nine million gallons monthly, two-thirds of it going to three users -- SIU, Illinois Central Railroad and the Koppers Company tie treating plant.

CARBONDALE, ILL., Feb. -- Dr. Robert Lush, widely recognized authority on pasture improvement and cattle feeding who is professor of dairying at the University of Tennessee, will headline the program of the fifth annual Southern Illinois University Dairy Day here March 2. Others on the program include specialists from SIU and the University of Illinois.

Dairy Day sessions in Muckelroy Auditorium at the SIU Agriculture Building will be concerned primarily with the values of breeding and feeding in increasing dairying income on the farm. The event will be jointly sponsored by the SIU animal industries department and the Division of University Extension.

Dr. Lush, who has been at the University of Tennessee for 12 years and has written many station publications and articles on his field of specialization, will discuss the values of improved pasture management in obtaining greater dairy profits.

Dr. Howard H. Olson, SIU dairy specialist, will report on dairy research work at SIU.

Dr. Robert H. Touchberry, University of Illinois professor of dairy science, will discuss dairy breeding practices which will put more dollars from milk into the pockets of dairy farmers.

Dr. E. E. Ormiston, University of Illinois dairy scientist, will explore the possibilities and failings of cow pools in the modern dairying picture.

Henry Soborg, Breese, Ill., manager of the Southern Illinois Breeding Association, will tell how artificial breeding organizations can help the dairy farmer.

CARBONDALE, Ill., Feb.-- Holiday in Blue is the theme for a weekend entertainment agenda of the Air Force ROTC unit of Southern Illinois University on the Carbondale campus.

For the first time this year, a special revue of student talent from the SIU AFROTC detachment will be staged for the public at 8 p.m. Friday (Feb. 5), the day before the annual Military Ball. Appearing in the revue to be held in Shryock Auditorium will be members of the Angelaires, Angelettes, Singing Squadron, and a dance combo of members of the AFROTC band.

Music for the Saturday night ball will be furnished by the Bobby Christian band. Christian is known as Mr. Percussion and as the premier college concert and dance band leader of the nation. He will introduce a combination concert and dance type arrangement of SIU's **fight** song, "Go Southern Go", which will then be presented as a gift to the local committee.

Highlight of the dance will be the crowning of a queen selected by 2,000 cadets. Candidates for the honor are Barry Jo Wood, Granite City; Connie McGinnis, Pittsfield; Bonnie Meirink, Belleville; Phyllis McGill, Mt. Vernon and Rochelle Gerlach, Sparta. Retiring queen is Barbara Larkin of Benton.

Tickets for the ball are now on sale in the Student Union and in Wheeler Hall and will admit holders to the only formal dance of the year for the University students and their guests. Dress will be uniform for cadets and tuxedo for those men not in regulation blue. Veterans have the option of wearing dress uniforms or a tuxedo. Admission will be \$3 per couple.

Honorary host and hostess for the ball will be President and Mrs. Delyte W. Morris. Patron and patroness will be Col. (ret.) and Mrs. Alexander MacMillian and Dean and Mrs. I. Clark Davis.

SPORTS

THE WEEK IN SPORTS AT SIU:

Basketball -- Feb. 5 at Eastern Illinois; Feb. 6 at Kentucky Wesleyan
Gymnastics -- Feb. 5 Michigan State, here (7:30 p.m.); Feb. 6 at Ball State
Swimming -- Feb. 5 Loyola University, here (4:30 p.m.); Feb. 6 Eastern Illinois
here (2 p.m.)
Wrestling -- Feb. 3 Eastern Michigan, here (7:30 p.m.); Feb. 6 at Eastern Ill.

CARBONDALE, ILL., Feb. -- Two weeks of mid-season doldrums snap Friday (Feb. 5) when Southern Illinois University's cagers try for their second Interstate Conference win over Eastern Illinois, this time at Charleston.

The following night the Salukis test Kentucky Wesleyan's Panthers, fourth-ranked nationally among small colleges, at Owensboro, Ky., in a non-league battle.

The Salukis, idle since Jan. 23 when they scored a 96-84 victory over Western Illinois to move past the Leathernecks into a first place tie with Northern Illinois, throttled EIU, 102-74, in the first meeting here. In that game Southern set a new IIAC free throw record, making 40 out of 50 from the gift line.

Eastern currently is 7-9 overall and 2-3 in league play. The Panthers knocked SIU out of a possible tie for the conference crown last year with a 72-70 squeaker at Charleston, EIU picked up a pair of wins last week, 65-56 over Indiana State and 94-81 over Quincy. Southern defeated Indiana State, 74-69, and Quincy, 79-74, earlier this year.

The Salukis Saturday will be seeking their first win over Kentucky Wesleyan since the series started in 1957. Wesleyan, led by Kelly Coleman who scored 49 points against SIU here Jan. 4, has won all four of the previous games. The closest Southern game was 61-51 in the 1957 All-American City tourney at Owensboro. Scores this year were 100-85 and 103-87.

The Salukis return home Feb. 12-13 for IIAC games with Central and Eastern Michigan.

CARBONDALE, ILL., Feb. -- The undefeated Spartans of Michigan State meet Southern Illinois University's gymnasts in a dual meet here Friday (Feb. 5).

The Salukis are 5-2 for the season and 2-2 against Big 10 opposition after last weekend's 61-51 loss to Michigan. SIU has defeated Indiana and Illinois by identical scores, 58½-53½, and lost to Iowa, 67-45, and Michigan. Other wins were over Central Michigan, Air Force Academy and Eastern Illinois.

Michigan State, 2-0 in the series with SIU, bumped the Salukis at East Lansing last year, 64-48, and this year finished second to Southern's fourth at the Midwest Open in Chicago. The Spartans own wins over Central Michigan, Ohio State, Minnesota, Navy Pier and Wisconsin.

Saturday (Feb. 6) Coach Bill Meade takes the Salukis to Ball State. A Feb. 2 date here with Illinois has been re-scheduled tentatively for a Feb. 26 double-dual with Minnesota.

CARBONDALE, ILL., Feb. -- Southern Illinois University swimmers return to dual meet action with two home appearances Friday (Feb. 5) against Loyola University of Chicago and Saturday against Eastern Illinois.

Last weekend Coach Ralph Casey's Salukis captured their second straight Central AAU championship in Chicago, winning eight out of 14 events to top North Central College, 137-105.

Capt. Bert Rumpel and Paul Wachendorfer were double winners for the Salukis at the AAU meet. Rumpel took the 100 and 220-yard breast stroke events, and Wachendorfer won the 220-yard butterfly and 200-yard individual medley.

Ray Padovan, SIU freshman from North Miami, knocked Tarzan out of the record books, winning a qualifying heat of the 100-yard freestyle in :51.2. The effort cracked Johnny Weismuller's :51.4 set in 1923.

Southern's next meet is Feb. 3 at Illinois State Normal.

CARBONDALE, ILL., Feb. -- Two dual matches are on tap for Southern Illinois University's wrestlers this week. The Salukis face Eastern Michigan here Wednesday (Feb. 3) at 7:30 p.m., and then travel to Eastern Illinois Saturday (Feb. 6).

Coach Jim Wilkinson's Salukis now are 2-1-1 for the year after Northwestern's pesky Wildcats fought to a 13-13 draw at Evanston last weekend. Southern, defending Interstate Conference champions, owns wins over Central Michigan and Ritenour YMCA of St. Louis. The loss was to Oklahoma State's defending NCAA titlists.

The Salukis return home Feb. 13 against Illinois State Normal.

CHICAGO, Ill., Feb. 1. -- The University of Illinois has won the 1934-35 season with a 5-1 record in the Big Ten conference. The team has won all five of its home games and lost only one away game. The team is led by Coach Harry K. Gaffney. The team has won the Big Ten championship for the second year in a row. The team has won the Big Ten championship for the second year in a row. The team has won the Big Ten championship for the second year in a row.

KEY SPEAKERS ARE
SCHEDULED FOR SIU
INDUSTRIAL MEETING

Carbondale, Ill., Feb. -- Tennessee's top factory finder and General Electric's business climate consultant head a list of prominent speakers to be featured in an Industrial Development Conference at Southern Illinois University March 9.

The conference is being called by the University's department of community development "to enable civic and business leaders to learn how best to accomplish their community industrial objectives."

George L. Benedict, Jr., commissioner of Tennessee's Division of Industrial Development, will talk about "Finding Industrial Prospects" at a pre-luncheon session. The evening banquet speaker will be Edwin C. Kepler, business climate consultant for General Electric, Schenectady, N.Y., who will discuss "What You Can Do For Your Community."

Other speakers will include A.C. Todd, Cincinnati, industrial agent for the Baltimore and Ohio Railroad; Edward W. Niemeyer of the Boston firm of Townsend, Dabney and Tyson, who will discuss institutional financing for industrial development, and Mrs. Ruby H. Koelling, St. Louis, branch manager for the Small Business Administration, who will explain the federal financing program.

James F. Cannon, superintendent of the Illinois Division of Industrial Development and Planning, will present "Manufacturers' Questions About Illinois Communities," and George M. Pendell, executive secretary of the Mattoon Association of Commerce, will tell how to present community information to industrial prospects.

In an invitation issued to business and civic leaders, the SIU department of community development said the current year will see the expenditure of a record \$40 billion for plant openings and relocations and "this region now has the best opportunity ever to get a fair share of these new plants."

A registration fee of \$3 includes a luncheon at which SIU Vice-President John E. Grinnell will talk about "Area Potential." The evening banquet is another \$3, but advance registrants may attend all of the sessions for \$5. Inquiries should be addressed to Development Conference, SIU Department of Community Development, Carbondale.

--eh--

2000-2001
 2002-2003
 2004-2005

The conference is being called by the University's department of community development "to make a basic and serious attempt to discuss the role of the community development worker in the future."

[illegible]

James H. Brown, representative of the Illinois Division of Industrial Development and Planning, who stated "Manufacturers' Council on Great Lakes", and George W. Marshall, executive secretary of the National Association of Commerce, will tell how to present emergency information to the public. In an address limited to business and civic leaders, the GDU Secretary of community development said the current year will see the expansion of a record 140 million for plant location and relocation and "this region now has the best opportunity ever to get a fair share of these - plants."

should be referred to Chairman, Committee, The Department of the Army, Washington, D.C.

1. The first of these is the fact that the majority of the population of the United States is now living in urban areas. This is a result of the process of urbanization, which has been going on since the beginning of the industrial revolution. The process of urbanization is the movement of people from rural areas to urban areas. This movement is caused by a number of factors, including the search for better living conditions, the desire for education, and the need for employment. The process of urbanization has led to the growth of large cities and the decline of small towns and villages. This has had a significant impact on the economy and society as a whole. The majority of the population now lives in urban areas, which has led to the development of a new type of economy and society. The economy is now based on the production and distribution of goods and services in urban areas. The society is now based on the values and customs of urban areas. This has led to the development of a new type of culture and way of life. The process of urbanization is still going on, and it is expected to continue for many years to come. This will have a significant impact on the future of the United States and the world as a whole.

1. The first of these is the fact that the majority of the population of the United States is now living in urban areas. This is a result of the process of urbanization, which has been going on since the beginning of the 20th century. The population of the United States has increased from about 100 million in 1900 to over 200 million in 1950. At the same time, the population of rural areas has decreased from about 100 million in 1900 to about 50 million in 1950. This has led to a concentration of the population in urban areas, which has had a number of important consequences. One of the most important is that it has led to a change in the way of life of the majority of the population. In rural areas, the population has traditionally been engaged in agriculture, and the way of life has been based on the rhythms of the seasons. In urban areas, the population has traditionally been engaged in industry and commerce, and the way of life has been based on the rhythms of the clock. This has led to a number of differences between the two ways of life, including differences in the amount of leisure time, the amount of social contact, and the amount of participation in community activities. These differences have led to a number of problems, including the problem of social isolation, the problem of mental health, and the problem of crime. These problems have led to a number of efforts to improve the way of life in urban areas, including efforts to create more green space, to create more social services, and to create more community activities. These efforts have had some success, but there is still a long way to go. The second of the two main reasons for the problems of urban areas is the fact that the majority of the population of the United States is now living in a very small number of large cities. This is a result of the process of centralization, which has been going on since the beginning of the 20th century. The population of the United States has increased from about 100 million in 1900 to over 200 million in 1950. At the same time, the population of small cities and towns has decreased from about 100 million in 1900 to about 50 million in 1950. This has led to a concentration of the population in a very small number of large cities, which has had a number of important consequences. One of the most important is that it has led to a change in the way of life of the majority of the population. In small cities and towns, the population has traditionally been engaged in a variety of activities, including agriculture, industry, and commerce. The way of life has been based on the rhythms of the seasons, the rhythms of the clock, and the rhythms of the community. In large cities, the population has traditionally been engaged in a few activities, including industry and commerce. The way of life has been based on the rhythms of the clock. This has led to a number of differences between the two ways of life, including differences in the amount of leisure time, the amount of social contact, and the amount of participation in community activities. These differences have led to a number of problems, including the problem of social isolation, the problem of mental health, and the problem of crime. These problems have led to a number of efforts to improve the way of life in large cities, including efforts to create more green space, to create more social services, and to create more community activities. These efforts have had some success, but there is still a long way to go. The third of the two main reasons for the problems of urban areas is the fact that the majority of the population of the United States is now living in a very small number of large cities. This is a result of the process of centralization, which has been going on since the beginning of the 20th century. The population of the United States has increased from about 100 million in 1900 to over 200 million in 1950. At the same time, the population of small cities and towns has decreased from about 100 million in 1900 to about 50 million in 1950. This has led to a concentration of the population in a very small number of large cities, which has had a number of important consequences. One of the most important is that it has led to a change in the way of life of the majority of the population. In small cities and towns, the population has traditionally been engaged in a variety of activities, including agriculture, industry, and commerce. The way of life has been based on the rhythms of the seasons, the rhythms of the clock, and the rhythms of the community. In large cities, the population has traditionally been engaged in a few activities, including industry and commerce. The way of life has been based on the rhythms of the clock. This has led to a number of differences between the two ways of life, including differences in the amount of leisure time, the amount of social contact, and the amount of participation in community activities. These differences have led to a number of problems, including the problem of social isolation, the problem of mental health, and the problem of crime. These problems have led to a number of efforts to improve the way of life in large cities, including efforts to create more green space, to create more social services, and to create more community activities. These efforts have had some success, but there is still a long way to go.

GRINNELL TAKES
VICE-PRESIDENCY
OF SIU, CARBONDALE

Carbondale, Ill., Feb. -- John E. Grinnell, new Southern Illinois University vice-president, took charge of operations on the University's Carbondale campus Feb. 1.

In a move to streamline administration of what is now the state's second largest school, SIU gave the former College of Education dean control over day-to-day academic, business and student affairs for the 7,619-student campus.

Under this new plan, SIU President Delyte W. Morris and his staff, including veteran Vice-President Charles D. Tenney, will devote their major efforts to planning and review of the University's far-flung operations throughout southern Illinois.

Grinnell's new assignment parallels that of Harold W. See, vice-president for operation of the Southwestern Illinois campus, which is providing college-level programs for 3,039 students in temporary quarters at Alton and East St. Louis until classrooms are built on a campus site near Edwardsville.

An SIU dean since 1955, Grinnell has taught at a number of large universities in this country and abroad, and he is especially noted for his work and writing in educational public relations.

SET DAIRY DAY
AT SIU MARCH 2;
DR. LUSH SPEAKER

Carbondale, Ill., Feb. -- A widely recognized authority on pasture improvement and cattle feeding will headline the program of the fifth annual Southern Illinois University Dairy Day March 2.

Dr. Robert Lush, a University of Tennessee professor, will discuss the values of improved pasture management in obtaining greater dairy profits.

Other speakers will include Drs. Robert H. Touchberry and E. E. Ormiston, University of Illinois dairy scientists; Dr. Howard H. Olson, SIU dairy specialist, and Henry Soborg, Breese, Ill., manager of the Southern Illinois Breeding Association.

UNIVERSITY OF
SOUTHERN ILLINOIS
AT CARBONDALE
OFFICE OF THE
VICE-CHANCELLOR

Carbondale, Ill., Feb. 11 -- John E. Grinnell, new Southern Illinois University
vice-president, took charge of operations on the University's Carbondale campus

Feb. 11.

In a move to streamline administration of what is now the state's second
largest campus, SIU gave the former College of Education more autonomy
by appointing business and student affairs for the 7,400-student campus.

Under this new plan, SIU President Dwight W. Davis and his staff, including

former Vice-President Joseph H. Jansky, will handle major policy matters.

Grinnell and review of the University's four-figure operations for budget planning

Illinois.

Grinnell's new assignment parallels that of Harold W. See, vice-president for

operation of the Southwestern Illinois campus, which is private college-level.

Grinnell will oversee the temporary program at Alton and East St. Louis until

classrooms are built on a campus site near Edwardsville.

In SUI since 1955, Grinnell has fought at a number of Illinois universities

in this country and abroad, and he is especially noted for his work and leadership in

educational public relations.

SET UP BY
AT CARBONDALE
DM, 11-11-60

Carbondale, Ill., Feb. 11 -- A widely recognized authority on pasture improvement

and cattle feeding will headline the program of the 17th annual Southern Illinois

University Dairy Day March 2.

Dr. Robert Lusk, a University of Tennessee professor, will discuss the nature

of improved pasture management in outdoor power dairy trials.

Other speakers will include Drs. Robert H. Eubank and H. E. Grinnell.

University of Illinois dairy scientists Dr. Howard H. Olson, SUI dairy specialist,
and Jerry Smith, Illinois, director of the Southern Illinois Breeding Association.

ELEVEN SCOUTS
TO BE HONORED
AT COUNCIL MEET

CARBONDALE, Ill., Feb. -- Eleven Boy Scouts from Carbondale, Marion and Cairo will be presented training awards at the annual meeting of the Egyptian Council of Boy Scouts here Feb. 25.

Names of the boys who were approved by the board of review for eagle and silver awards were announced by Dr. R. C. Steck, Anna, Council president. Silver beaver award winners will be revealed at the meeting, said Dr. Steck, one of the two volunteer scout leaders selected for the award last year.

Jim Cummins, Cairo, who earned his silver award previously, will be honored at the annual dinner meeting in the Southern Illinois University Cafeteria as the scout who made the most progress during 1959. The Boy Scout unit to be cited for the most progress will be Squadron 7, Carbondale.

Ronald Bedwell and Ronald Harris of Carbondale will join the select group of 10 scouts in the Council who have earned silver awards. The new Eagle Scouts are Tom Campbell and Bruce Webster, Cairo; Jimmy Hunt, Carbondale, and Freddy Monroe, Patrick Sniderwin, Mike Sniderwin, James W. Eaton, and Karl Federer, all of Marion.

Addition of the new eagles will swell the total in the Council to 22.

Dr. Steck said ceremonies for the award winning boys will be held at 8:20 p.m., following the buffet dinner. Silver beaver awards will be presented prior to Executive Director Dwain Murphy's annual report to the Council. Silver beaver award winner with Dr. Steck last year was James Bailie, former scoutmaster in Herrin.

Donald Hileman, SIU journalism professor and chairman of the Council's Western District, will be master of ceremonies for the meeting. New Council officers will be installed at the close.

ELDER SCOUTS
TO BE NOMINATED
AT COUNCIL MEETING

CARROLLVILLE, Ill., Feb. -- Eleven Boy Scouts from Carrollville, Marion and Union
will be presented training awards at the annual meeting of the Egyptian Council of
Boy Scouts here Feb. 22.
Names of the boys who were approved by the board of review for eagle and
silver awards were announced by Dr. R. C. Stack, Area, Council president. Silver
awards will be presented at the meeting, said Dr. Stack, one of the two
eagle scouts selected for the award last year.
Jim Canning, Cairo, who earned his silver award previously, will be honored at
the annual dinner meeting in the Southern Illinois University Cafeteria as the scout
who made the most progress during 1979. The Boy Scout unit to be elected for the next
term will be Springfield 7, Carrollville.
Ronald Howell and Harold Harris of Carrollville will join the scout group of
scouts in the Council who have earned silver awards. The new Eagle Scouts are
in Springfield and Cairo: Robert, Cairo; Jimmy Hunt, Carrollville; and Frank Watson,
Union. Other scouts, Mike Anderson, James E. Brown, and Karl Peterson, all of Marion.
Addition of the new eagles will swell the total in the Council to 22.
Dr. Stack said ceremonies for the award winning boys will be held at 8:30 p.m.
following the dinner. Silver award awards will be presented prior to
the dinner. Executive Director James Murphy's annual report to the Council. Silver Beaver
and winner with Dr. Stack last year was James Harris, former scoutmaster in Union.
Council President, Dr. Stack, will be master of ceremonies and chairman of the Council's Western
district, will be master of ceremonies for the meeting. New Council officers will be
announced at the dinner.

BACK TO PRISONS

John W. Allen
Southern Illinois University

A recent column that digressed from watermelons to the Menard Penitentiary concluded with a story about the first building there. It said little about how earlier prisons operated or about how prison practices and objectives have changed. Since that article was written, the author spent a day, voluntarily, behind Menard's high prison walls. That day, despite the air of human tragedy always to be seen about prisons, was not an unpleasant one. It did rekindle a long time interest in prisons.

Come to think of it, my interest in prisons dates from the time when another small boy and I slipped away from our families to make a quiet inspection of the calaboose where a young neighbor had languished overnight.

This village bastile was a very small affair, only about eight by ten feet. As I remember, it was built of two-by-fours and two-by-sixes. The floor was made of these timbers placed on edge, jammed tightly together, and generously spiked from the sides. The walls were made of the same timbers laid flat and nailed through each layer. The ceiling was like the floor. The building was roofed in the conventional manner, with clapboards.

BACK TO PRISON

John W. Allen
Southern Illinois University

A recent column that digressed from watermelons to the Alcatraz
Penitentiary concluded with a story about the first building there. It
said little about how earlier prisons operated or about how prison practices
and objectives have changed. Since that article was written, the author
spent a day voluntarily behind Maryland's high prison walls. That day,
despite the air of human tragedy always to be seen about prisons, was not
an unpleasant one. It did resemble a long time interest in prisons.
Come to think of it, my interest in prisons dates from the time when
another small boy and I slipped away from our families to make a quiet
inspection of the calaboose where a young neighbor had languished overnight.
This village calaboose was a very small affair, only about eight by ten feet.
As I remember, it was built of two-by-fours and two-by-sixes. The floor
was made of these timbers placed on edge, jammed tightly together, and
generously spiked from the sides. The walls were made of the same
timbers laid flat and nailed through each layer. The ceiling was like the
floor. The building was rooked in the conventional manner, with

As I recall, there was only one window about a foot square, with no glass but with sizable iron bars so closely spaced that a hand would hardly pass through their openings. The door, built of timbers arranged diagonally and spiked heavily, was four inches thick. It was hung on great iron hinges that had been made by the local blacksmith. A low bunk in a corner had some straw-filled ticks and a few drab covers. There was a slot in the door through which a plate of food could be passed.

A low shelf held a bucket for water, a tin wash pan and a cup. A towel, considerably the worse for wear, hung on a convenient nail. Plumbing facilities consisted of a stone jar with a wooden lid. The walls, once white-washed, had scaled to a pale gray. We felt sorry for Albert who had spent a night there.

Perhaps the most secure jail in southern Illinois was the one on the lower level of the Alexander County courthouse at Thebes. This one had stone walls three feet thick with a vaulted stone ceiling. Narrow windows were criss-crossed with heavy iron bars. With a floor of stone and a double door of heavy iron like boilerplate, it was truly formidable. Even now, a century after it was abandoned, a few repairs would make it a good jail--good when measured in terms of preventing escape.

Perhaps the "easiest" jail in the region was the old one of brick at Elizabethtown in Hardin County. On photographs of the old Hardin County jail, one can easily distinguish 14 scars resulting from holes left by fleeing tenants who "dug out" through the crumbling walls and did not pause to mend them.

As I recall, there was only one window about a foot square, with no glass but with a single iron bar so closely spaced that a hand would barely pass through their openings. The door, built of timbers arranged diagonally and spiked heavily, was four inches thick. It was hung on great iron hinges that had been made by the local blacksmith. A low bunk in a corner had some straw-filled ticks and a few straw covers. There was a slit in the door through which a plate of food could be passed.

A low shelf held a bucket for water, a tin wash basin and a cup. A towel, considerably the worse for wear, hung on a convenient nail. Illumination consisted of a single jar with a wooden lid. The walls, once white-washed, had faded to a pale gray. The tall pot for Albert who had spent a night there.

Perhaps the most secure jail in southern Illinois was the one on the lower level of the Alexander County Courthouse at Thebes. This one had stone walls three feet thick with a vaulted stone ceiling. Narrow windows were crisscrossed with heavy iron bars. With a door of stone and a double door of heavy iron like the bolted one, it was truly formidable. Even now, a century after it was abandoned, a few rats would make it a good jail - good when measured in terms of preventing escape.

Perhaps the "safest" jail in the region was the old one of which the Elliptical in Hardin County. On photographs of the old Hardin County jail, one can easily distinguish it as a series of small holes left by fleeing convicts who "dog out" through the crumbling walls and did not pause to return.

Nothing cheerful has been found about old prisons, from the boyish inspection of the village calaboose to the recent Menard visit. However, there was more of an air of hope--an "esprit de corps", if there can be such in a prison--at Menard than has been observed at any other prison previously visited.

Though it was easy to see that discipline was exact and rigid, there was no evidence of any cruel intent. Likewise, the faces of the prisoners, though unsmiling, did not reflect the belligerency that is usually displayed.

As we walked about the prison yards at Menard it was easy to recall stones in the Paris pavements that mark the location of the French Bastille, the place of countless tragedies of injustice. It also brought memories of the Tower of London with its water gate, prison cells, the beheading block, and the headsman's ax, of which Raleigh said, "It is a sharp remedy but a sure cure for all ills." Also there came to mind the slightly sunken stone, always wet with the spittle of passing boys, that marks the "Heart of Midlothian" in Edinburgh.

While at Menard, it was remembered that, in bygone era, people could be hanged for a half dozen or more crimes in Illinois, or imprisoned for debt and given a diet of bread and water. Also, there was a time when the whipping post, the "cat of nine tails," the stock, the pillory, the branding iron and cropping knife awaited violators. That was the era when 10 to 500 lashes, "well laid on" were given those adjudged guilty of various crimes, and slaves who attempted to run away could expect to have their heel tendons cut.

The story of prisons and prisoners is indeed a grim one.

Nothing cheerful has been found about old prisons, in the days of the village calaboose to the recent Alcatraz. However, there was more of an air of hope--an "esprit de corps", if there can be such a thing--at Alcatraz than has been observed at any other prison previously visited.

Though it was easy to see that discipline was exact and rigid, there was no evidence of any cruel intent. Likewise, the faces of the prisoners, though unattractive, did not reflect the bitterness that is usually displayed.

As we walked about the prison yards at Alcatraz it was easy to recall stories in the Paris newspapers that mark the location of the French Bastille, the place of countless tragedies of injustice. It also brought memories of the Tower of

London with its water gate, prison cells, the beheading block, and the headman's ax, of which Raleigh said, "It is a sharp remedy but a sure cure for all ills." Also there came to mind the slightly shaken stone, always

RELEASE: AMs SUNDAY (FEB. 7)

CARBONDALE, ILL., Feb. 7 -- Connie McGinnis, a 19-year old sophomore from Pittsfield, is the 1960 Air Force ROTC Queen at Southern Illinois University.

Miss McGinnis, a marketing student and daughter of Mr. and Mrs. A. E. McGinnis of Pittsfield, was crowned at a lavish Military Ball here Saturday night (Feb. 6). Her election, based on balloting of SIU's 1,700-man AFROTC wing two weeks ago, was not announced until the Ball itself.

EDITORS: PLEASE NOTE RELEASE DATE

Miss McGinnis was crowned by Barbara Larkin of Benton, retiring queen. Her attendants - runners up in voting - were Bonnie Meirink, Belleville (21 N. 37th); Phyllis McGill, Mt. Vernon (1409 Salem Rd.); Barry Jo Wood, Granite City (2406 Edison) and Rochelle Gerlach, Sparta. The Queen and her court were presented by Col. George Blase, commanding officer of the unit.

As the new AFROTC Queen, one of the top social distinctions for an SIU coed, Miss McGinnis will preside over cadet wing functions during the coming year.

Release: IMMEDIATE

CARBONDALE, Ill., Feb.-- A lot of American dentists are prescribing fluoride supplements for their patients, but few of them are following recommended dosages.

That's one of the conclusions reached following what is probably the most massive survey ever attempted on U. S. dentists as a group. Two members of Southern Illinois University's health education department, Sheldon Steinberg and Deward Grissom, mailed postcard questionnaires to every civilian dentist in the nation -- 97,878 in all. The 12 percent return, exceeding their fondest hopes, also broke some records for a poll of that kind.

Object of the saturation survey, financed by the LORVIC Pharmaceutical Co. of St. Louis, was to see how many U. S. school children are getting fluorides in some form. Water fluoridation is solidly endorsed by the American Dental Association as a tooth decay preventative and dozens of studies have proven its effectiveness. But the researchers were particularly interested in what kind of protection dentists are prescribing for those youngsters whose home drinking water is not fluoridated at the city plant. Some 140 million U. S. residents are served from unfluoridated municipal water systems and another 40 million live beyond city mains altogether.

The survey results and its implications were described by Steinberg and Grissom Sunday (Feb. 7) at a meeting of the American Association of Public Health Dentists in Chicago. The Association devoted its entire scientific meeting to the Steinberg-Grissom survey.

Of the more than 12,000 dentists responding, 31 percent prescribe fluoride tablets or solutions for patients living outside water-fluoridated areas. But of that group, more than 80 percent are not following the dose schedule approved by the ADA, the survey showed.

(more)

MEMORANDUM

CARBONDALE, ILL., Feb. 4 - A lot of American dentists are prescribing fluoride supplements for their patients, but few of them are following recommended dosage. That's one of the conclusions reached following what is probably the most extensive survey ever attempted on U. S. dentists as a group. Two members of Southern Illinois University's health education department, Donald Stenberg and Edward O'Brien, mailed postcard questionnaires to every dentist in the nation -- 90,000 in all. The 32 percent return, exceeding their highest hopes, also broke some records for a job of that kind.

Results of the nation survey, financed by the IOWA Pharmaceutical Co. of St. Louis, are so far how many U. S. school children are getting fluoride in their teeth. Fluoridation is widely endorsed by the American Dental Association as a health safety preventative and dozens of studies have proven its effectiveness. But the research was particularly interested in what kind of protection dentists are prescribing for those youngsters whose home drinking water is not fluoridated at the city plant. Some 140 million U. S. residents are served by municipal water systems, and another 40 million live beyond city limits altogether.

The survey results and its implications were described by Stenberg and O'Brien Sunday (Feb. 7) at a meeting of the American Association of Public Health Dentists in Chicago. The association devoted the entire session to the Speer-Brown-Gilson survey.

Of the more than 12,000 dentists responding, 31 percent prescribe fluoride tablets or solutions for patients living outside water-fluoridated areas. But of that group, more than 80 percent are not following the dose schedule approved by the ADA, the survey showed.

Grissom told the group that public health dentists should be taking the lead in pushing for wider use of systemic fluorides. At the same time, he said, they should be "highly concerned" over dosage uniformity.

Steinberg says the survey points up a paradoxical situation in the face of the nation's greatest public health problem, tooth decay.

"On the basis of previous studies and the ADA's recommendations, it would seem that American dentists as a group are agreed on the value of fluoride pills," he says. "But individually, they don't seem to agree on who should take them or how much to prescribe."

"In time," says Steinberg, "the continuing public debate over water fluoridation will die out altogether when its definite advantages are better understood and firmly established. Perhaps before too long every city water supply in the nation will be fluoridated. But this still leaves us with those 40 million people whose water comes from wells or other non-municipal sources. They are the ones for whom some program of protection is vital. Systemic tablets can do it, and it's up to American dentists to see that it's done."

The study has been submitted for publication in the Journal of the American Dental Association.

Goldman told the group that public health officials should be taking the lead in pushing for wider use of systematic fluoridation. At the same time, he said, they should be "highly concerned" over dosage regulation.

Greiderberg says the survey points up a potential situation in the case of the nation's present public health program, tooth decay.

"On the basis of previous studies and the fact that fluoridation is widely known that fluoridation benefits as a group and agreed on the value of the 'filling' in teeth," he said. "Consequently, they don't seem to agree as they should when it comes to fluoridation."

"In fact," says Greiderberg, "the continuing water supply over the last 100 years will be the only water when the nation's drinking water is supplied and fairly established. Perhaps before too long every city which supply to the nation will be fluoridated. But this still leaves an estimated 10 million people whose water comes from wells or other non-municipal sources. They are the ones for whom a program of protection is vital. Government action can be taken to see that it's done."

The water has been submitted for publication in the Journal of the American Dental Association.

CARBONDALE, Ill., Feb.-- A discussion on the "Implications of Artificial Insemination in the Swine Industry" by Dr. H. L. Self, Iowa State University extension specialist in animal husbandry, will highlight the third annual Southern Illinois University Swine Day Friday (Feb. 12). Sessions will be held from 9 a.m. until 4 p.m. in Muckelroy Auditorium of the SIU Agriculture Building.

Self, who participated in SIU's first Swine Day program two years ago, is widely known as an authority on the physiology of swine reproduction. A native of Stephenville, Texas, he is a graduate of Texas A and M College, and obtained his doctorate in animal husbandry and genetics at the University of Wisconsin. His research has been concerned with animal breeding, the physiology of reproduction, and the effect of feeding on swine reproduction.

"Swine Production for Tomorrow's Market" is the topic of Wilbur L. Plager's talk at 10:40 a.m., following Self's lecture. Plager, Lafayette, Ind., is secretary-treasurer of the American Yorkshire Club, a purebred swine organization.

Albert Gehlbach, a Lincoln (Ill.) swine producer and farmer, will speak on "Swine Production as a Business" in the afternoon. Gehlbach is the farmer-owner of a 280-acre farm and markets about 1500 hogs per year on a one litter system.

A 2 p.m. round table discussion and a tour of the SIU swine facilities will conclude the meeting.

Lunch will be served in the Auditorium by the student Block and Bridle Club.

Swine Day is sponsored by the animal industries department and the SIU Extension Division.

ANNA, ILL., Feb. -- Dr. Abraham Simon, professor and chief of the department of social science at Chicago Medical School, will speak Tuesday (Feb. 9) in the second of a series of public seminars on "Aging" at Anna State Hospital.

The 10th annual Seminar Series, whose theme is "The Aged in America Society," is co-sponsored by Anna State Hospital and the Southern Illinois University Rehabilitation Institute. Seminars are scheduled every other Tuesday at 7:30 p.m. through May 17 in the Employees' Lounge of the Hospital.

Dr. Simon's topic will be "Patterns of Normal Aging in Our Society and the Common Deviations." A former director of the Jewish Child Welfare Association in St. Louis and head of the William Healy Institute for Juvenile Research in Chicago, Dr. Simon has specialized in social adjustment problems of both youth and the very old.

The series, open to the public and for credit through SIU's Extension Division, features known authorities in the fields of social science, psychiatry, psychology, religion and education.

NEW ATHENS, ILL., Feb. -- David R. Browning, superintendent of the Cooperative Agronomy Research Center at Southern Illinois University, will speak on "Tillage Practices in Crop Production" at an adult education short course for farmers Monday evening (Feb. 15) in New Athens. The meeting will be at 7:30 p.m. in the New Athens High School.

Browning, a member of the SIU faculty since 1957, received his bachelor's and master's degrees in soils chemistry at the University of Missouri. He has continued work toward his doctorate in agronomy at the University of West Virginia, where he was employed from 1941 to 1957. He became superintendent of the institution's Ohio Valley Experiment Station in 1947. He has written a number of publications on water actions in soil.

At SIU Browning has been supervising a large amount of research on tillage practices, crop varieties and management, and fertility problems.

Dennis Taylor, vocational agriculture teacher at the high school, has arranged the meeting. Browning's appearance is being made possible through the cooperation of the SIU School of Agriculture and the SIU Division of Technical and Adult Education.

CARBONDALE, ILL., Feb. -- For the first time in five years the annual Southern Illinois University Fine Arts Festival makes a bow to jazz music.

J. J. Johnson, one of the top jazz musicians in the nation, will be featured in a concert Monday (Feb. 15) at 8 p.m. in SIU's Shryock Auditorium. The show, part of the three-week Festival, will be admission free to the public.

"Since jazz is currently one of the most popular types of genuinely American music, we feel that the concert is in keeping with the theme and an important part of the Festival," commented Stephen A. Barwick, associate professor of music at SIU and chairman of the 1960 Fine Arts Festival. The theme this year is "America and the Arts."

Johnson has been rated as the foremost jazz trombonist in nearly every major jazz poll since 1955. Johnson's jazz quintet features Cliff Jordan on the tenor sax, Albert Heath on drums, James De Brent on bass, and Cedar Walton, piano.

CARBONDALE, ILL., Feb. -- Extremes of temperature, either hot or cold, may possibly be an influence on the development of cancer cells, a Southern Illinois University scientist indicated today.

Dr. Maurice Ogur, associate professor in the Biological Research Laboratory, said his experiments were conducted -- with yeast cells -- as a model for the conditions described in Warburg's theory of cancer. This theory, widely discussed but not universally accepted, contends that radiation, skin irritation and other known causes of cancer bring on the disease by knocking out the respiratory apparatus of cells.

If the German scientist is right in his belief that cancer is caused by the cells' loss of their ability to "breathe" properly, Ogur said, then variations in temperature might speed up or slow down this change in the formation of cancer cells, as it did in the yeast model.

Ogur described his experiments with yeast cells as "another theoretical step" in exploring the implications of Warburg's concept. The unexpected result of his tests, Ogur said, was that low as well as high growth temperatures speed up the mutations which lead to respiratory-deficient cells.

A report on his studies, to be published by Genetics magazine, also states that the reproduction rate of hereditary particles in the cytoplasm -- the outer rim of the cell -- may be independent of the growth rate of the entire cell.

-- eh --

...the ... of the ...

the results of the investigation of the growth rate of the embryo.

CARBONDALE, Ill., Feb.-- With seven new apartment buildings for married students almost three-fourths filled, Southern Illinois University housing officials have started a major appraisal of student housing needs for the next decade.

Contractors have turned over the keys to the last of eight buildings in the new Southern Hills apartments project for 128 student families. But negotiations are well underway for a joint \$7.9 million loan that will add 144 more apartments to Southern Hills as well as 11 other units for 990 single students in the Thompson Point and organized group housing areas on the other side of the campus.

The drive for housing construction, being carried forward largely through self-liquidating loans rather than state appropriations, has been on in earnest since the early and mid-50's when enrollments began leaping far beyond housing capacities.

In 1957, the "no-vacancy" sign went up on the Thompson Point project (six residence halls for 732 students) more than three months before school opened and the gain in student housing was nullified by another record enrollment. For the past two years, increasing numbers of September newcomers have been forced to abandon registration when they couldn't find housing.

Now, with about one-fourth of the single students at Carbondale housed in permanent University facilities, housing director Albin Yokie and other administration officials are wondering if a 1957 estimate of 8,500 beds needed in the next decade is a realistic one.

"Although right now we are in better shape than at any time since the end of the war, we must try to assemble a definite picture of housing needs for families, graduate students, organized groups and single students through the next seven to 10 years," Yokie says. "The problems of such a long-range plan involve not only how much housing we'll need, but what kind. Campus land available in the same period may dictate whether we have to plan multiple-story units or more buildings of the Thompson Point design."

(more)

The Thompson Point project, six separate units with a central dining and service center, is fundamentally designed to provide an informal "living and learning" environment in the manner of English residential colleges. A full-time faculty member is in charge of each building and specially selected student Resident Fellows supervise day-to-day operations. A classroom is included in each building and each room opens directly on a floor-length study and visiting lounge. As an effort to "relate living and educational experiences," the Thompson Point development has been termed a national model for student housing.

Future housing for married students will probably follow the design of Southern Hills. The eight-building group just finished includes 68 two-bedroom, 48 one-bedroom and a dozen utility apartments. The two-bedroom units are rented to students for \$85 a month.

The apartments are furnished with Pullman-type kitchens including three-burner electric range and refrigerator. The kitchen is separated from the living room by a folding woven panel. Other furnishings in the apartments include lamps, sofas and overstuffed chairs, built-in chests and storage space, dining room tables and chairs and a double bed and built-in desk in the large bedroom. Each apartment is asphalt tiled, contains a built-in TV antenna and a three-fold electric socket for air conditioning units. Hot-water heat is thermostatically controlled and incinerators for waste disposal are located throughout the area. The only unfurnished portions of Southern Hills are the small bedrooms in the two-bedroom apartments; planners thought most parents would have their own furniture for the little ones.

Children's play areas and adult recreation sites will be added later.

If all goes according to plan, the \$7.9 million additions to Thompson Point, Southern Hills and the organized group residence area will be ready for bid-advertising late this spring. But beyond this, Yokie and his staff are planning additional housing for some 3-4,000 single students which will be needed by the 1963-64 school year.

The program is a project, an experimental unit with a central living and
service center, is fundamentally designed to provide an "integrated" living and
learning environment in the manner of English residential colleges. A well-
known faculty member is in charge of each building and specially selected students
Resident Fellow supervises day-to-day operations. A classroom is included in each
building and each room opens directly on a floor-length study and visiting lounge.
As an effort to "relax living and educational requirements," the program today
development has been turned a national model for student housing.
There are two married students will probably follow the design of
Southern Hills. The eight-building group, just finished includes two two-bedrooms,
two one-bedroom and a dozen utility apartments. The two-bedrooms with one central
bathroom for two a month.
The apartments are furnished with kitchen-type kitchen including stove,
refrigerator, sink and refrigerator. The kitchen is separated from the living
room by a folding glass screen, which functions in the apartment as a living
area and overhanging dining, built-in chests and storage space, dining room
seating and chairs and a built-in bed and built-in desk in the large bedroom. Each
apartment is a single room, contains a built-in TV set and a two-door
closet for air conditioning units. Hot-water heat is provided
controlled and independent for waste disposal and located throughout the area.
The city has established portions of Southern Hills are the small portions in the
two-bedroom apartments; all more thought most persons would have their own
bathrooms for the little ones.
Children's play areas and adult recreation areas will be added later.
If all goes according to plan, the \$7.9 million addition to University Park,
Southern Hills and the original group residence area will be ready for mid-
overlapping late this spring. But beyond this, 1964 and the fall are planning
additional housing for some 3-4,000 single students which will be needed by the

CARBONDALE, ILL., Feb. -- The Fifth Annual Advertising Workshop, sponsored by Southern Illinois University's journalism department and the Illmoky Advertising Club, will be held at SIU Feb. 26.

Included in the workshop, carried out with the cooperation of the Chicago office of Campbell-Mithun Advertising and the Carbondale branch of The Kroger Co., will be awards for "advertising ideas that worked", an exhibit of entries from persons engaged in any phase of advertising in the area.

The program will include four sessions -- led by Robert D. Blegen, vice-president of Campbell-Mithun, Chicago; Theodore LeMaire, creative director of radio and television advertising for Campbell-Mithun; Harlon Matthews, sales promotion and advertising manager for The Kroger Co. in Carbondale, and Frank Stull, of Campbell-Mithun.

Sessions will be held in the Morris Library Auditorium. A luncheon, to include installation of Illmoky Ad Club officers and recognition of retiring officials, and the annual retail advertising recognition banquet, will be held in the University Cafeteria.

Registration fees are \$7.50 for non-members and \$5.50 for Illmoky Ad Club Members. Advance registrations should be mailed to Donald Hileman, Journalism Department, SIU, Carbondale, no later than Thursday (Feb. 25).

Hileman said anyone engaged in advertising may send exhibits on "advertising ideas that worked", with winners to be recognized at an awards banquet during the workshop.

It's the second consecutive year for such an exhibit.

"The ideas can take any form," said Hileman, "a reprint, a tape recording, a written summarization."

He asked that explanation accompany the material in detail on the idea and what it did for the person's advertising program.

Deadline for exhibits is Thursday (Feb. 25). Entries received after that date will not be considered for the awards.

The entries may be sent to Dr. Donald Hileman, Journalism Department, SIU, Carbondale.

CARBONDALE, Ill., Feb. 22 -- The Fifth Annual Advertising Workshop, sponsored by Southern Illinois University's Journalism Department and the Illinois Advertising Club, will be held at SIU Feb. 23.

Included in the workshop, carried out with the cooperation of the Chicago office of Campbell-Mitchell Advertising and the Carbonate branch of The Paper Co., will be awards for "advertising ideas that worked," an exhibit of entries from persons engaged in any phase of advertising in the area.

The program will include four sessions -- led by Robert D. Hagan, vice-president of Campbell-Mitchell, Chicago; Theodore J. Hagan, creative director of radio and television advertising for Campbell-Mitchell; Herman Macken, sales promotion and advertising manager for The Paper Co. in Carbonate, and Frank Smith, of Campbell-Mitchell.

Sessions will be held in the Morris Library Auditorium. A luncheon, to include installation of Illinois Ad Club officers and recognition of retiring officials, and the annual award advertising recognition banquet, will be held in the University Cafeteria.

Registration fees are \$7.50 for non-members and \$5.00 for Illinois Ad Club members. Advance registrations should be mailed to Donald Hilsman, Journalism Department, SIU, Carbondale, no later than Thursday (Feb. 22). Hilsman said anyone engaged in advertising may send exhibit of "advertising ideas that worked," with winners to be recognized at an awards banquet during the workshop.

CARBONDALE, Ill., Feb. -- Eleven Boy Scouts from Carbondale, Marion and Cairo will be presented training awards at the annual meeting of the Egyptian Council of Boy Scouts here Feb. 25.

Names of the boys who were approved by the board of review for eagle and silver awards were announced by Dr. R.C. Steck, Anna, Council president. Silver beaver award winners will be revealed at the meeting, said Dr. Steck, one of the two volunteer scout leaders selected for the award last year.

Jim Cummins, Cairo, who earned his silver award previously, will be honored at the annual dinner meeting in the Southern Illinois University Cafeteria as the scout who made the most progress during 1959. The Boy Scout unit to be cited for the most progress will be Squadron 7, Carbondale.

Ronald Bedwell and Ronald Harris of Carbondale will join the select group of 10 scouts in the Council who have earned silver awards. The new Eagle Scouts are Tom Campbell and Bruce Webster, Cairo; Jimmy Hunt, Carbondale, and Freddy Monroe, Patrick Sniderwin, Mike Sniderwin, James W. Eaton, and Karl Federer, all of Marion.

Addition of the new eagles will swell the total in the Council to 22.

Dr. Steck said ceremonies for the award winning boys will be held at 8:20 p.m., following the buffet dinner. Silver beaver awards will be presented prior to Scout Executive Dwain Murphy's annual report to the Council. Silver beaver award winner with Dr. Steck last year was James Bailie, former scoutmaster in Herrin.

Donald Hileman, SIU journalism professor and chairman of the Council's Western District, will be master of ceremonies for the meeting. New Council officers will be installed at the close.

CARBONDALE, ILL., Feb. -- Tennessee's top factory finder and General Electric's business climate consultant head a list of prominent speakers to be featured in an Industrial Development Conference at Southern Illinois University March 9.

The conference is being called by the University's department of community development "to enable civic and business leaders to learn how best to accomplish their community industrial objectives."

George L. Benedict, Jr., commissioner of Tennessee's Division of Industrial Development, will talk about "Finding Industrial Prospects" at a pre-luncheon session. The evening banquet speaker will be Edwin C. Kepler, business climate consultant for General Electric, Schenectady, N.Y., who will discuss "What You Can Do For Your Community."

Other speakers will include A.C. Todd, Cincinnati, industrial agent for the Baltimore and Ohio Railroad; Edward W. Niemeyer of the Boston firm of Townsend, Dabney and Tyson, who will discuss institutional financing for industrial development, and Mrs. Ruby H. Koelling, St. Louis, branch manager for the Small Business Administration, who will explain the federal financing program.

James F. Cannon, superintendent of the Illinois Division of Industrial Development and Planning, will present "Manufacturers' Questions About Illinois Communities," and George M. Pendell, executive secretary of the Mattoon Association of Commerce, will tell how to present community information to industrial prospects.

In an invitation issued to business and civic leaders, the SIU department of community development said the current year will see the expenditure of a record \$40 billion for plant openings and relocations and "this region now has the best opportunity ever to get a fair share of these new plants."

A registration fee of \$3 includes a luncheon at which SIU Vice-President John E. Grinnell will talk about "Area Potential." The evening banquet is another \$3, but advance registrants may attend all of the sessions for \$5. Inquiries should be addressed to Development Conference, SIU Department of Community Development, Carbondale.

CARBONDALE, ILL., Feb. -- Dr. Joseph P. Vavra, associate professor of plant industries in the Southern Illinois University School of Agriculture, will begin a six-months' sabbatical leave March 15 (until Sept. 15) for study in Europe.

Vavra will embark March 29 and will visit universities, agricultural experiment stations, and soil science institutes in Belgium, Denmark, England, France, Germany, Holland, Italy, Norway, Spain, and Sweden. In England he will visit one of the worlds' oldest agricultural experiment stations at Rothamsted, near London.

During the trip Vavra will observe teaching methods, research techniques and results, and exchange ideas with European authorities in the field of soil chemistry and soil fertility.

Vavra, a member of the SIU faculty since 1951, teaches courses in soils and fertilizers and has conducted numerous experiments on the use of fertilizers for crop production on soils common to southern Illinois.

A native of Union Pier, Mich., he is a graduate of Michigan State University and received his master's degree there in 1948. He obtained his doctorate in soil chemistry at Purdue University in 1952.

Vavra's family will accompany him and visit with Mrs. Vavra's parents near Munich, Germany.

TEACHER OFFERS
SUGGESTIONS ON
WINTER DRIVING

CARBONDALE, Ill., Feb. -- There are three chief problems with the way most people drive in the winter, says James E. Aaron, lecturer of safety education at Southern Illinois University.

Aaron recently returned from studies on the subject at what is called the "coldest cotton pickin' classroom on the continent" at Clintonville, Wisconsin -- on the frozen surface of Pine Lake which was covered with snow and ice to a depth of 15 inches.

There, he joined representatives from various universities and colleges in researching into problems of winter driving. The idea is to pass these along to driving instructors in the nation's high schools.

The group found that most drivers commit three grave errors in the wintertime, says Aaron:

1. When a car begins to "fishtail" on the ice, people tend to panic.

"Most people jump on the brake pedal, locking the brakes and throwing the car completely out of control," says Aaron. "Then along with this, they tend to undercorrect or overcorrect the situation, either of which can throw the car into a skid."

2. Sudden acceleration. In winter driving this is dangerous, Aaron pointed out, because it causes a car to go into what is known as a "power skid."

3. Many people are under the impression that by pumping the brakes, they cut down on a car's stopping distance. That, he says, is not true in winter driving although pumping the brakes, as opposed to slamming them on, does offer better control of the vehicle.

SIU REPORTS
LESS DEMAND
FOR TEACHERS

CARBONDALE, ILL., Feb. -- Fewer calls for teachers, higher salaries, and more demand for personnel in business and industry are significant in the annual report just released by Southern Illinois University's Placement Service.

The report on 1959 graduates who tried for jobs through SIU's Placement Service also revealed that requests for engineers leads the industrial outlook, and that needs are great for secretaries, physicists, mathematicians and statisticians.

Dr. Roye Bryant, director, said in comparing the 1959 figures with statistics since 1952, "a smaller percent of graduates took positions in the lower 31 counties of Illinois."

He also found 22 percent fewer calls for teachers for both elementary and secondary positions, and that the average salary percent of increase in teaching is "much smaller" than the percent of increase in the average salary for non-teachers.

Meanwhile, "academic marks are becoming more meaningful in securing the better positions," Bryant pointed out.

The report showed that 252 interviewers came to the SIU office to recruit 1959 graduates for teaching positions and 217 to recruit for positions in business, agriculture, social work and industry. The interviewers came from 13 states and the District of Columbia.

The average annual salary paid an SIU graduate with technical training entering business or industry was \$5,514, and for non-technically trained graduates \$4,848. This was 10 percent higher than salary received by 1958 grads, Bryant reported.

SUBJECT: THE REPORT

CARBONDALE, ILL., Feb. -- Career calls for teachers, higher salaries, and more
demand for personnel in business and industry are significant in the annual report
just released by Southern Illinois University's Placement Service.

The report on 1959 graduates who tried for jobs through SIU's Placement Service
also revealed that requests for engineers, health and industrial workers, and that
needs are great for accountants, physicians, communications and statisticians.
Dr. Royce Hays, director, said in comparing the 1959 figures with statistics
since 1952, "an excellent picture of graduates took positions in the lower 31 counties
of Illinois."

He also found 23 percent lower calls for teachers for both elementary and
secondary positions, but that the average salary percent of increase in teaching
is "much smaller" than the percent of increase in the average salary for non-
teachers.

Meanwhile, "technical fields are becoming more meaningful in securing the better
positions," Hays pointed out.

The report showed that 729 interviews came to the SIU office to recruit
1959 graduates for teaching positions and 517 to recruit for positions in business,
agriculture, social work and industry. The interviews came from 13 states and
the District of Columbia.

The average annual salary paid to SIU graduates with degrees including
entering business or industry was \$5,514, and for non-technically trained graduates
\$4,348. There was 10 percent higher than salary received by 1958 grads, Hays
reported.

NEW CRAFT GUILD
SEEKS MEMBERS IN
SOUTHERN ILLINOIS

CARBONDALE, ILL., Feb. -- Southern Illinoisans have been invited to join a new area promotion group -- the Southern Illinois Arts and Crafts Guild.

John W. Allen, Carbondale, retired Southern Illinois University historian and president of the group, said its purposes are to encourage area production and assist in marketing arts, crafts and specialty items of the region. It also plans to sponsor institutes to develop skills and will try to correlate arts and crafts promotional activities of groups and individuals.

Sponsoring organizations are Educational Council of 100, Southern Illinois, Inc., and four Southern Illinois University agencies -- the School of Fine Arts, departments of industrial and special education, and the Small Business Institute.

Dues for membership are \$1 annually, Allen said.

Other officers are: Mrs. Harry Killion, Ava, vice-president; Mrs. Jo Ann Boydston, Carbondale, secretary; and Mrs. George Earll, Makanda, treasurer. Directors are Louis Aaron, Harrisburg, Mrs. Hal Trovillion, Brownfield, Mrs. Fred List, Carbondale, Mrs. Norman Moore, Carbondale, Vincent Farrell, Carterville, C. Joe Thomas, Cobden, Miss Ethel Trigg, Vienna, Mrs. Thelma Mathis, Pinckneyville, and Mrs. E.L. Bath, Herrin.

ATTENTION: FARM EDITORS

SIU COUNTRY COLUMN

By Albert Meyer

Not so long ago October was Eggtober, but March will be National Egg Month, according to Scott Hinners, Southern Illinois University poultry specialist, who has been named chairman of the poultry industry's Illinois committee for promoting the use of more eggs next month.

At the nerve center of this nationwide promotional campaign is the Poultry and Egg National Board which is the egg industry's research, consumer information, and public relations organization. During March this organization will be making an educational approach to 50 million American homemakers through newspapers, radio, television, and retail stores with the health story of eggs. U.S. Secretary of Agriculture Ezra T. Benson has endorsed the idea in a letter to the organization's general manager.

Eggs, like milk, are considered one of nature's most complete foods with a wide variety of uses. Ham or bacon and eggs have been a breakfast standby in the American home for generations, but the poultry industry is anxiously working to call attention to the value and usefulness of eggs in cooking and for preparing in a multitude of ways for other meals and between-meals snacks. No doubt newspapers, radio, television, and retail markets will be featuring appetizing ways of using eggs and their economy as a food during the month.

Why pick March for this special campaign on eggs? Normally this is the month when egg production is at a high level and the producer related organizations are interested in boosting the consumption of eggs to relieve the pressure of heavy supplies on the market. Egg prices hit an 18-year low point last year and the market still is relatively low, making eggs an economical food for the American family.

Eggs comprise nearly a \$2 billion industry for American agriculture. If, by the special promotion, the per capita consumption can be raised by one egg for the month, more than 14.5 million dozen will be used. This is equivalent to the production of a dozen eggs for each laying hen on Illinois farms.

SHO. COUNTRY COUNTRY
By Robert Meyer

Not so long ago October was forgotten, but now it is National Egg Month, according to Geoff Hinners, Southern Illinois University poultry specialist, who has been named chairman of the poultry industry's Illinois committee for promoting the use of more eggs next month.

At the same time of this nationwide promotional campaign is the poultry and egg industry's own industry's research, consumer information, and public relations organization. During March this organization will be active in educational work to 30 million American housewives through newspapers, radio, television and retail stores with the industry's story of eggs. U.S. Secretary of Agriculture Earl W. Borman has endorsed the idea in a letter to the organization's general manager.

Eggs, life itself, are considered one of nature's most complete foods with a wide variety of uses. Not only eggs and eggs have been a breakfast staple in the American home for generations, but the poultry industry is anxiously working to sell attention to the value and usefulness of eggs in cooking and for preparing in a wide variety of ways for other meals and for special occasions. No doubt newspapers, radio, television, and retail stores will be featuring appealing ways of using eggs and retail stores as a food during the month.

Why pick March for this special campaign on eggs? Well, March is the month when egg production is at a high level and the producer related organizations are interested in boosting the consumption of eggs to relieve the pressure of heavy marketing on the market. Egg output hit an 18-year low point last year and the market still is relatively low, making eggs an economical food for the American family.

Egg supplies nearly a \$2 billion industry for American agriculture. If, by the special promotion, the egg industry's consumption can be raised by one cent for the month, more than 14.5 million dollars will be saved. This is equivalent to the production of 1 dozen eggs for each family in Illinois farms.

Number 337 in a weekly series -- "It Happened in Southern Illinois" -- a series consisting of regional folklore and historical accounts suitable for feature, column, or editorial use.

LINCOLN'S MOTHER
John W. Allen
Southern Illinois University

Each February millions of people pause to observe Abraham Lincoln's birth. The thoughts of many doubtlessly dwell upon his greatness while some think sympathetically of the rugged pioneer boyhood that he knew. No one who has spent a winter in a chinked log cabin or one chilly and blustery night in a rudely constructed half-faced camp can easily forget the experience. But this was the way of life of the Lincoln family, and his young years were years of physical hardship and meager living.

Measured by another standard, however, the boy Abraham was rich. Any boy at any time who has an intelligent, capable and affectionate mother is never poor. One with two such mothers is rich, indeed, and Lincoln was so blessed. Nancy Hanks Lincoln, his blood mother, was the first of these. The second was Sarah Bush (Johnson) Lincoln who lived beyond the death of her illustrious stepson, and thus her story is more fully known than is that of his real mother.

Nancy Hanks Lincoln died before the boy was 10 years old and her recorded history is brief. Enough remains, however, to portray her as a wonderful mother. The lasting influence she exerted over her son was great; perhaps it was the force that shaped his destiny. Of her effect on his whole life Lincoln said in his later years, "All that I am or hope to be, I owe to my angel mother. Blessings on her memory."

Even so, some morbid-minded persons, using flimsy and often the more spurious appearing evidence -- along with an occasional phrase out of context -- would defame her.

The thoughts of many doubtless dwell upon the greatness of the man whose life was spent in the service of the nation. The rugged pioneer boyhood that he knew, the one who has spent a winter in a chained log cabin or one chilly and dreary night in a rustic constructed half-breed cabin can easily forget the experience. But this was the way of life of the Lincoln family, and his young years were years of physical hardship and mental living.

Measured by another standard, however, the boy Abraham was rich. Any boy at any time has an intelligent, capable and affectionate mother is never poor. One with two such mothers is rich, indeed, and Lincoln was so blessed. Nancy Lincoln, his blood mother, was the first of these. The second was Sarah (Johnson) Lincoln who lived beyond the reach of her illustrious son, and thus her story is more fully known than that of his real mother.

Nancy thinks Lincoln died before the boy was 10 years old and her recorded history is brief. Enough remains, however, to portray her as a wonderful woman. The lasting influence she exerted over her son was great, perhaps it was the force that shaped his destiny. Of her effect on his whole life Lincoln said in his later years, "All that I am or hope to be, I owe to my angel mother. Blessed be her memory."

Even so, some morbid-minded persons, using flimsy and often the more specious reasoning, advance -- along with an occasional phrase out of context -- would

Nancy Hanks was the daughter of Joseph and Lucy Hanks. She is indicated by the order of listing on her father's will as the youngest of several children. Her name appears few other times in contemporary records. One of these is the marriage bond filed by Thomas Lincoln; another is the record of their marriage by the Rev. Jesse Head at Beechland, Ky., on June 12, 1807. Her name and signature appear on a few legal documents, showing that she wrote a clear and legible hand.

Tradition relates that she received a fair education, considerably above the average for girls at that time. Tradition also holds that it was she who gave her son the most help in his learning to read. All records indicate that she was cheerful in disposition, genial, kindly and was a devout Christian.

It was this woman who went -- perhaps not reluctantly even with a full knowledge of the trials that lay ahead -- with Thomas Lincoln and the children to settle in the wilderness of Indiana near Gentryville in the winter of 1816. It was there that Thomas Lincoln built their first home in the state, a half-faced camp of poles that was heated by a log fire on its open sides. In this they spent the remainder of the winter, completing a better cabin in the spring.

There were many hazards to pioneer life. To the usual ones there was added that of the mysterious "milk sick" in the fall of 1818. Nancy Hanks Lincoln contracted the malady and died in October. Her body was carried to a knoll in the lonely forest a short way from the cabin and buried, the grave being marked by rough unlettered stones. A few other burials were made there before the cemetery at Pigeon Creek Church became the one commonly used.

The little cluster of graves near the Lincoln cabin site remained abandoned, neglected and all but forgotten for a long interval. Finally, one of the Stuebaker brothers decided to mark the grave of Lincoln's mother. To determine its location three survivors among those who attended the funeral were brought back. All agreed that her's was one of three pioneer mothers buried side by side, but one insisted that it was the grave farthest north while a second thought it was the center one, and the third believed it was either the southern or center one. The center one, accordingly, was marked.

(more)

Nancy Hanks was the daughter of Joseph and Lucy Hanks. She is indicated by the order of listing on her father's will as the youngest of several children. Her name appears few other times in contemporary records. One of these is the marriage bond filed by Thomas Lincoln; another is the record of their marriage by the Rev. Jesse Hunt at Decatur, Ill., on June 12, 1837. Her name and signature appear on a few legal documents, showing that she wrote a clear and legible hand.

Tradition relates that she received a fair education, considerably above the average for girls of that time. Tradition also holds that it was she who gave her son the most help in his learning to read. All records indicate that she was cheerful in disposition, careful, kindly and was a devout Christian.

It was this woman who went -- perhaps not reluctantly even with a full knowledge of the trials that lay ahead -- with Thomas Lincoln and the children to settle in the wilderness of Indiana near Centerville in the winter of 1836. It was there that Thomas Lincoln built their first home in the state, a half-acre camp of poles that was heated by a log fire on its open sides. In this they spent the remainder of the winter, completing a better cabin in the spring.

There were many hazards to pioneer life. To the usual ones there was added that of the mysterious "dix stick" in the fall of 1838. Nancy Hanks Lincoln contracted the ailment and died in October. Her body was carried to a knoll in the lonely forest a short way from the cabin and buried, the grave being marked by rough upright stones. A few other burials were made there before the cemetery at Pigeon Creek Church became the one commonly used.

The little cluster of graves near the Lincoln cabin site remained abandoned, neglected and all but forgotten for a long interval. Finally, one of the Stouffer brothers decided to mark the grave of Lincoln's mother. To determine its location these survivors among those who attended the funeral were brought back. All agreed that her's was one of three pioneer mothers buried side by side but one insisted that it was the grave farthest north while a second thought it was the center one, and the third believed it was either the southern or center one. The center one, accordingly, was marked.

(more)

This story of the grave's location was told by a very old man who, as a youth, had driven the carriage bringing those who came to locate the grave from the railway station to the lonely spot in the woodland. My meeting with him occurred some 30 years ago on the day when the governor of Indiana and a commission were there to plan part of the improvements that one sees there now. The old gentleman was there at the behest of the governor to supply such information as he could.

The Indiana home site stirs the imagination to visualize Lincoln's early environment and the influence that Nancy Hanks Lincoln had on one of America's truly great men. The site is a must for those who would follow the Lincoln Trail.

This story of the grave's location was told by a very old man who was a youth
 and driven the carriage through those who came to locate the grave. From the
 railway station to the house was in the westland. He walked with him to the
 grave 20 years ago on the day when the governor of Illinois had a conference
 with the president of the United States at the White House. The old man
 was there at the request of the governor to supply such information as he could.
 The Indian home site still stands in the same place as it has always
 stood and the influence that Henry North Lincoln had on the
 country was great. The site is a most fine place and would follow the Lincoln trail.

CARBONDALE, ILL., Feb. -- A painless symphony concert is on tap for several hundred southern Illinois school children this month when a company of puppets does a guest appearance with the Southern Illinois Symphony Orchestra.

The Llords Puppet Review, making a return engagement at a Southern Illinois University freshman convocation Thursday (Feb. 25) after an eye-opening show last year, will stay over for an afternoon performance billed strictly for the kids. In it, Daniel Llords and his 200 accomplished marionettes will provide on-stage animation for Symphony performances of Tschaikowsky's "Nutcracker Suite" and Offenbach's "Orpheus in Hades."

The concert will begin at 4 p.m. in Shryock Auditorium and if there are seats remaining after the youngsters are admitted they'll be open to grownups.

Symphony Conductor Carmine Ficocelli and Llords got together on the pop-puppet concert idea after last year's performance by the troupe. Llords' elaborately costumed puppets tread the stage to music by Mozart, Verdi, Strauss, Tschaikowsky and Offenbach, and also sing, dance (from square to ballet), swing from trapezes and speak in five of six different languages. The 12-foot wide stage includes trap doors, revolving floors and such special effects as smoke, rain, fireworks, and even lighted chandeliers.

Operating it all is Llords, who sometimes manipulates as many as 187 strings at one time while singing, running tape-recorded sound effects and generally keeping things organized.

The Llords Review has played with symphonic groups before, both in the U.S. and Europe, and Ficocelli thought a similar production would be a good way to introduce area children to live symphonic music. The Symphony will also perform a few selections without the puppets--after the ice has been broken.

CARROLL, Ill., Feb. -- A brilliant symphony concert is on tap for several
between southern Illinois school children this month when a company of
does a great appearance with the Southern Illinois Symphony Orchestra.
The Florida Paper Review, which is a recent symphony of a Southern Illinois
University (Champaign) conducted by [illegible] (Feb. 25) after an eye-opening show last
year, will stay over for an afternoon performance a little earlier for the kids. In
it, Daniel Lardo and the 200 accomplished musicians will provide a unique
animation for Symphony performances of Tchaikovsky's "Symphony No. 4" and
Offenbach's "Olympia in Red."

The concert will begin at 4 p.m. in Chicago Auditorium and if there are seats
remaining after the youngsters are admitted they'll be open to everyone.

Symphony conductor Carmino Rosselli and Lardo got together on the program
concert idea after last year's performance by the same. Lardo, originally
conceived hopes to lead the stage to music by Mozart, Verdi, Strauss, Tchaikovsky
and Offenbach, and also sing, dance (from square to ballet), swing from trapeze
and speak in five of six different languages. The 12-foot wide stage includes
trap doors, revolving floors and such special effects as smoke, rain, fireworks,
and even lighted chandeliers.

Quitting it all at Lardo, who sometimes anticipates as many as 127 students
at one time singing, running, hand-clapping sound effects and generally
keeping things lively.

The Florida Review has played with symphonic groups before, both in the U.S.
and Europe, and Rosselli thought a similar production would be a good way to
introduce new children to live symphonic music. The Symphony will also perform
a few selections without the youngsters--after the ice has been broken.

CARBONDALE, Ill., Feb.-- A Murphysboro farm wife and mother of five children, Mrs. William Sauer, has been named "Southern Illinois Women's Leader of the Year" for 1960.

The selection was announced by Mrs. Alexander R. MacMillan, Carbondale, president of the Southern Illinois University Women's Club.

Mrs. Sauer will be honored at the annual area Women's Day program at SIU April 21. The special day is sponsored jointly by SIU and the club.

It is the fourth such award to be issued. Last year's winner was Mrs. Stella Collins, West Frankfort. Other winners have been Mrs. William G. Stratton, in 1958, and State Director of Education Vera M. Binks, in 1957.

Mrs. Sauer is county chairman of the women's committee for the Illinois Farm Bureau, and a charter member and former board member of the Home Bureau. She has been active in Parent-Teachers Association work, was a president of the band parents organization at Murphysboro high school, and is on the church board of the Poplar Ridge Methodist Church.

She and her husband reside on an 800-acre farm near Murphysboro where they raise primarily fruit (peaches and apples) and livestock.

They have five children: John and George who live at home; Mrs. Margaret Keller, living near Murphysboro; Mrs. Jane Werkheiser, of Stockton, and Bob, who is serving in the Army.

Her husband is on the IAA board and she was on the first state women's committee of that organization.

CARBONDALE, ILL., Feb. -- Kenneth Webb, Moline, is currently learning the skills of repairing dilapidated books in the local bindery of the Southern Illinois University Morris Library under Southern's unique Employment Evaluation and Training Program.

The program, now in its third year of operation at SIU, is one of the activities of the special education department of which Dr. Oliver Kolstoe is chairman. The work is carried on in cooperation with the Illinois Division of Vocational Rehabilitation, various related SIU departments, and 20 area business firms.

Kolstoe briefly explains the program thus:

Every three weeks state vocational rehabilitation counselors throughout Illinois assign to the SIU project four young men who are so handicapped by personality, learning, or decision-making difficulties that they have had little or no employment. Each undergoes an 13-weeks' testing and training period at SIU before being returned to his local community for possible job placement under supervision of the counselor who assigned him.

During his first three weeks at SIU the person is subjected to a series of tests to evaluate his health and personality problems and his performance capacities with 23 items related to light industry, business, clerical, and service work. For the remaining 15 weeks he receives supervised experience in each of five different divisions of work. The local bindery is one of those divisions. Others are in other kinds of work at SIU or with cooperating firms in the area.

- more -

During the training period the young men live in a dormitory at the SIU Southern Acres campus and are transported to their place of work training daily. Dormitory living and participation in social or recreational activities are a part of the program. The on-the-job activities are supervised by Fount Warren III, SIU vocational adjustment training supervisor.

Young Webb will complete his three weeks' training period in the bindery Feb. 19 before moving into another of five fields of employment training that he will receive. Mrs. Margaret Richardson, bindery supervisor, says work in the local bindery is proving highly valuable as a skill-training project and is the only one of its kind at present.

In addition to Webb, who works eight hours daily, Mrs. Richardson uses nine SIU students part time in completing about 15,000 items per month -- repairing library and textbook service volumes and binding pamphlets, some periodicals, and loose-leaf materials. When Webb's training period has been completed another trainee will be assigned. Mrs. Richardson says the number of finished pieces produced by the local bindery in one basement room of the Morris Library building has doubled annually for the past four years, amounting to more than 35,000 pieces in 1959.

During the training period the young men live in a dormitory at the STU Southern Area campus and are encouraged to take part in work training daily. Dormitory living and participation in social or recreational activities are a part of the program. The on-the-job activities are supervised by young women (17-19 years old) adjustment training supervisor.

Young Webb will complete his three weeks' training period in the history Feb. 19 before moving into another of the fields of employment training that he will receive. Mrs. Margaret Richardson, history supervisor, says work in the local history is giving him valuable as a skill-training project and is the only one of its kind in present.

In addition to Webb, who works eight hours daily, Mrs. Richardson says nine STU students part time in completing about 15,000 items per month -- repairing library and textbook service volumes and binding pamphlets, some periodicals, and loose-leaf materials. When Webb's training period has been completed another trainee will be assigned. Mrs. Richardson says the number of finished pieces produced by the local history in one basement room of the Harris library building has doubled annually for the past three years, amounting to more than 35,000 pieces in 1957.

ATTENTION: FARM EDITORS.

CARBONDALE, ILL., Feb. --- How southern Illinois farmers with beef cow herds can increase their production and earnings is discussed in a new Southern Illinois University School of Agriculture publication issued this week in cooperation with the University of Illinois Agriculture Experiment Station and the U. S. Department of Agriculture farm economics research division.

Entitled "Increasing Production and Earnings on Farms With Beef-Cow Herds in the Unglaciaded Area of Southern Illinois," it is released as School of Agriculture Publication No. 6. Co-authors are Dr. Harvey S. Woods, formerly manager of the SIU Experimental Farms, and Dr. W. D. Buddemeier, University of Illinois agricultural economist. Woods now is head of the Illinois State Normal University agriculture department.

The study is based on Woods' 1954 survey of 66 farms with beef cow herds for producing feeder cattle in Hardin, Pope, Johnson, Massac, Union, and Pulaski Counties. Findings indicate many farmers have too small herds or do not manage their farms efficiently enough to have a satisfactory living from the enterprise even though they have enough land.

Woods concludes many of the part-time or low income full-time farmers would increase their earnings substantially on the existing farm units by increasing the crop production through better fertility and soil conservation practices, by improving the number and quality of the beef cows to get a larger income volume, or by combining with the beef enterprise some other farming operation, such as raising hogs, so that the farmer's labor would be used more fully. The study suggests two alternate plans for improving the earnings in each of three different groups of beef-cow farms in the area.

Copies of the publication may be requested from the SIU agricultural industries department in the School of Agriculture.

Release: IMMEDIATE

CARBONDALE, ILL., Feb. -- There are three chief problems with the way most people drive in the winter, says James E. Aaron, lecturer of safety education at Southern Illinois University.

Aaron recently returned from studies on the subject at what is called the "coldest classroom on the continent" -- on the frozen surface of Pine Lake, at Clintonville, Wis.

There, he joined representatives from various universities and colleges in researching into problems of winter driving. The idea is to pass these along to driving instructors in the nation's high schools.

The group found that most drivers commit three bad errors in the wintertime, says Aaron:

1. When a car begins to "fishtail" on the ice, people tend to panic.

"Most people jump on the brake," says Aaron, "locking the brakes and throwing the car completely out of control. Then along with this, they tend to undercorrect or overcorrect the situation, either of which can throw the car into a skid."

2. Sudden acceleration. In winter driving this is dangerous, Aaron pointed out, because it causes a car to go into what is known as a "power skid."

3. Many people, says Aaron, are under the impression that by pumping the brakes, they cut down on a car's stopping distance. That, he says, is not true in winter driving, although pumping the brakes as opposed to slamming them on, does offer better control of the vehicle.

very poor people drive in the winter, says James E. Aarow, associate safety education at Southern Illinois University.

the following classification of the subjects of the study:

The group found that not drivers could find bad errors in the

that people jump on the backs of the car, looking for trouble, and throwing the car completely out of control. Then along with that they tend to be concerned or worried about the situation, either on their own or with the car into a ditch.

3. Sudden acceleration. In other driving tests in which a

1. The first is the *Journal of the American Medical Association*, which is the largest and most influential of the medical journals. It is published weekly and is read by a large number of physicians. It is also the journal that is most likely to be cited in legal cases.

3. Many people, says Adams, are under the impression that by passing the vehicle, they cut down on a car's stopping distance. That is not true in winter driving, although passing the vehicle as opposed to slowing down or, does offer better control of the vehicle.

It was the 12th year such winter tests have been held at Clintonville, under auspices of the National Safety Council. Pine Lake was frozen to a depth of 15 inches when it served as a classroom.

In addition to giving driver education teachers and supervisors the last word on how to go on ice and snow, tests were also made of school and intercity busses, effect of windshield wiper arm pressure on visibility, various tires, chains and equipment.

"Each instructor was assigned to a car furnished by automobile manufacturers, each with its own test driver," Aaron said. "After driving around with him, we were put on our own.

"The first experience on ice is one of apprehension," he said, "but we learned fast."

Why the classroom on the frozen lake?

"So teachers will know what they're talking about when they start teaching high school students how to drive in winter weather," says Aaron. "Right now, it's something new as far as education goes. Not many schools have winter driving as part of their driver education training."

A manual on winter driving teaching techniques, for use by high school driver training teachers, and similar material for state courses of study, are being prepared by the group.

It was the 12th year that winter tests have been held at Cincinnati, Ohio. The National Safety Council. The lake was frozen to a depth of 15 inches when it served as a classroom.

In addition to giving driver education teachers and supervisors the last word on how to go on ice and snow, tests were also made of school bus safety, effect of windshield wiper and pressure on visibility, various types, chains and equipment.

Each instructor was assigned as a car instructor at Cincinnati. Manufacturers, each with its own test driver, were also present. After driving around with him, he was put on his own.

The first question on ice is one of observation, he said, but the second test.

Why the discussion on the frozen lake?

The teachers all know that they're talking about when they start teaching high school students how to drive in winter weather, says Aaron. Right now it's something new as far as education goes. For many schools have winter driving as part of their driver education training.

A manual on winter driving teaching techniques, for use by high school driver training teachers, and similar material for state courses is being prepared by the group.

CARBONDALE, ILL., Feb. -- Fewer calls for teachers, higher salaries and more demand for personnel in business and industry are significant in the annual report just released by Southern Illinois University's Placement Service.

The report on 1959 graduates who tried for jobs through SIU's Placement Service, also revealed that requests for engineers leads the industrial outlook, and that needs are great for secretaries, physicists, mathematicians and statisticians.

Dr. Roye Bryant, director, said in comparing 1959 figures with statistics since 1952, "a smaller percent of graduates took positions in the lower 31 counties of Illinois."

He also found 22 percent fewer calls for teachers for both elementary and secondary positions, and that the average salary percent of increase in teaching is "much smaller" than the percent of increase in the average salary for non-teachers.

Meanwhile, "academic marks are becoming more meaningful in securing the better positions," he pointed out.

The report showed that 252 interviewers came to the SIU office to recruit 1959 graduates for teaching positions, 217 recruited for positions in business, agriculture, social work and industry, and that the interviewers came from 13 states and the District of Columbia.

JOHN DILL BROWN
SOUTHERN ILLINOIS UNIVERSITY
CARBONDALE, ILLINOIS
Phone: BR 2-5550

Release: IMMEDIATE

CARBONDALE, Ill., Feb. 17 -- Fewer calls for research, higher salaries and more demand for personnel in business and industry are significant in the annual report just released by Southern Illinois University's Placement Service.

The report on 1959 graduates who tried to find jobs through SIU's Placement Service, also revealed that requests for engineers rank the highest in number, and that there are great needs for secretaries, typists, mathematicians and statisticians.

Dr. Frank Bryant, director, said in comparing 1959 figures with statistics since 1949, a smaller percent of graduates took positions

in the lower 31 percent of Illinois.

He also found 12 percent fewer calls for research for both elementary and secondary positions, and that the average salary percent of increase in teaching is "much smaller" than the percent of increase in the average salary for non-teachers.

Meanwhile, "vocational" fields are becoming more meaningful in teaching the future position, he pointed out.

The report showed that 117 interviews came to the SIU office to recruit 1959 graduates for teaching positions, 217 recruited for positions in business, agriculture, social work and industry, and that the interviews came from 13 states and the District of Columbia.

The average annual salary paid an SIU graduate with technical training entering business or industry was \$5,514, and for non-technically trained graduates \$4,843. This was 10 percent higher than salary received by 1958 grads.

The average 1959 bachelor degree elementary teacher got \$4,173, 3½ percent more than in '58, and secondary teachers with bachelor's, \$4,181, a 2 percent increase. Those with master's degrees got \$4,902 in elementary (2 percent increase), and secondary \$5,141, about an eight percent increase.

Of the total graduates, 46 percent took positions in teaching, 21.8 in business and industry, 17.4 went on to graduate school, and seven percent went into the armed forces.

By fields, here is where Dr. Bryant found the most demand from concerns seeking the graduates (listed in order of greatness of requests);

Engineering and Science: chemists, drafting and design engineers, research-development engineers, and production engineers.

In teaching, the elementary demands were greatest in grades one, two, six, three and kindergarten, in that order.

Subject matters with the greatest number of teaching vacancies reported were, in order: in elementary, English, math, and girl's physical education. The same held true for high schools.

In junior college and college vacancies, the greatest need was for teachers in English, mathematics, business education, foreign language and psychology, in that order.

The average annual salary paid in 1938 to graduates with technical training entering business or industry was \$3,714, and for non-technically trained graduates \$4,000. This was 10 percent higher than salary received by 1938 grads.

The average 1938 bachelor degree elementary teacher got \$2,171, 3% percent more than in 1937 and secondary teachers with bachelor's \$2,121, a 3 percent increase. Those with master's degrees got \$4,702 in elementary (2 percent increase), and secondary \$2,141, about an eight percent increase.

Of the total graduates, 16 percent took positions in teaching, 21.8 in business and industry, 17.4 went on to graduate school, and seven percent went into the armed forces.

By field, hard to make out. Bryant found the most demand from graduates seeking the professions (listed in order of greatest to least): Engineering and Science: chemists, drilling and design engineers, research-development engineers, and production engineers.

In addition, the elementary branches were greatest in number one, two, and three and distinguished in that order.

Graduates with the greatest number of teaching vacancies reported were, in order, in elementary, English, math, and girls' physical education. The same held true for high schools.

Of junior college and college vacancies, the greatest was for graduates in English, mathematics, business education, foreign language and psychology, in that order.

SIU COUNTRY COLUMN
By Albert Meyer

Pruning roses is not as difficult as some persons think, says Irvin Hillyer, floriculturist in the Southern Illinois University School of Agriculture. A few simple rules and a small, sharp pruning shears or knife are about all the necessities. A fine-toothed saw may be needed for cutting large canes.

The main purposes of pruning are: to improve the plant appearance, to remove dead wood, and to control the number and quality of the flowers that will be produced. If rose bushes are not pruned they soon grow into a tangled mass of brambles on which the flowers are small and of poor quality. The time and kind of pruning varies somewhat with the class of the roses--whether bush, tree, or climbing, Hillyer explains. Bush roses should be pruned in early spring before growth starts.

The first goal should be to remove the dead wood, being careful to cut an inch or two below the dark-colored areas on the stem. If no leaf buds remain on the live wood, smoothly cut away the entire branch or cane.

The next step is to cut out all weak growth and any canes or branches that are growing toward the center of the plant so that the remaining stems will be sturdy, developing good shape and flowers. If two branches cross one another, remove the weaker one completely by a clean cut next to the cane from which it originated.

Finally shape the bush by trimming the strong canes to a uniform height, being sure to leave as much good wood as possible and making the cuts cleanly just above a strong outward-facing bud. In the milder climate common to southern Illinois, strong rose bushes may be pruned to a height of 24 to 30 inches. Occasionally the winter kill is so heavy that it is impossible to do much shaping. Here emphasis must be on removing the dead wood, leaving live stems that have buds.

Tree roses also may be pruned at this season. They require rather heavy cutting to keep the tops from becoming too large for the stem. After removing the dead wood, cut the live canes to eight to twelve inches long and shape the plant. Some pruning may be necessary during the flowering season to control the plant shape.

Hardy rambler climbing roses should be pruned just after they have blossomed to stimulate new cane growth and the development of lateral stems on which next year's flowers will be borne. Dead wood may be removed at this time.

Number 338 in a weekly series -- "It Happened in Southern Illinois" -- a series consisting of regional folklore and historical accounts suitable for feature, column, or editorial use.

SOMETHING ABOUT OUR PROVERBS

John W. Allen

Southern Illinois University

Persons familiar with southern Illinois speech note frequent use of proverbs. These bits of wisdom and advice are very old, at least as old as written language. Some of those in use today were being passed about orally by the early Greeks and Romans, and others current now are found in written literature of centuries past.

The beginning of any proverb often is obscure. When origins are traced, it often is found that some were centuries in reaching their present form. It took about 500 years for several lines of German and English to be condensed into "Make hay while the sun shines." It was equally as long before a page or so of text was reduced to "Honesty is the best policy."

Unless one listens with care he does not realize the extent to which proverbs are used, nor the number with which he is familiar. A test of this can be made by checking the phrases below to see which of them you recognize. Necessary words may be added either before or after the phrase given to complete the proverb.

...strain at a gnat
A short horse...
...skin a flea...
What can't be cured...
...is a dear teacher...
Eavesdroppers seldom...
Every tub...
Talk is cheap...
A burnt child...
Every crow...
A hit dog...
...more flies than vinegar
Poor folks have...
A little nonsense...
...many a slip...
The more you stir...
...fish in the sea...
God tempers...
A whistling girl...
All signs...
Well begun...
...jack of all trades...

more

Dear Mr. Hill:

I am in a very sorry state of mind. I have been in the hospital for a long time. I am very weak and I am very tired. I am very sorry to hear that you are in the hospital. I hope you will get well soon.

Very truly yours,

James H. Hill

James H. Hill University

I am in a very sorry state of mind. I have been in the hospital for a long time. I am very weak and I am very tired. I am very sorry to hear that you are in the hospital. I hope you will get well soon.

I am in a very sorry state of mind. I have been in the hospital for a long time. I am very weak and I am very tired. I am very sorry to hear that you are in the hospital. I hope you will get well soon.

I am in a very sorry state of mind. I have been in the hospital for a long time. I am very weak and I am very tired. I am very sorry to hear that you are in the hospital. I hope you will get well soon.

I am in a very sorry state of mind. I have been in the hospital for a long time. I am very weak and I am very tired. I am very sorry to hear that you are in the hospital. I hope you will get well soon.

Shoemakers' children...
Circumstances alter...
The devil can cite...
Don't count...
Love me...
Barking dogs...
...sleeping dogs...
Beggars should not...
...irons in the fire
Any port...
...good man down
...whose ox is gored
...enough rope...
Every dog...
...home to roost
...the apple cart
...camel's back
...don't stub...
Hew to the line...
Still water...
...out of a turnip
An idle brain...

The completed proverbs are given below, in order, corresponding to the phrases above: Don't strain at a gnat and swallow a camel. A short horse is soon curried. He would skin a flea for its hide and tallow (and spoil a good butcher knife on the job). What can't be cured must be endured. Experience is a dear teacher but fools oft learn from no other. Eavesdroppers seldom hear good of themselves. Every tub must stand on its own bottom. Talk is cheap, but it takes money to buy good whiskey. A burnt child is afraid of the fire. Every crow thinks its chick is the blackest. A hit dog howls. Molasses catches more flies than vinegar.

Poor folks have poor ways. A little nonsense now and then is relished by the wisest men. There's many a slip twixt the cup and the lip. The more you stir the worse it will stink. There are just as good fish in the sea as have been caught. God tempers the wind to shorn lambs. A whistling girl and a crowing hen always come to some bad end. All signs fail in dry weather. Well begun is half-done. He's a jack of all trades and good at none. Shoemakers' children go barefoot. Circumstances alter cases. The devil can cite scriptures to prove his case. Don't count your chickens before they're hatched. Love me, love my dog. Barking dogs seldom bite. Let sleeping dogs lie. Beggars should not be choosers.

He has too many irons in the fire. Any port in a storm. You can't keep a good man down. It makes a difference whose ox is gored. Give him enough rope and he'll hang himself. Every dog has his day. (On a West Indies island last summer, a butcher was heard to say: "Every fat pig has its day."). Chickens come home to roost. Don't upset the apple cart. The last straw broke the camel's back. Be careful and do not stub your toe. Hew to the line and let the chips fall where they may. Still water runs deep. You can't squeeze blood out of a turnip. An idle brain is the devil's workshop.

These are only a few of thousands of recorded proverbs, and there are also many that are unwritten. It is unlikely that people will ever run out of appropriate proverbs.

He has too much iron in his life. The world is a storm. You can't keep
a good man down. It makes a difference who is down. Give him enough
rope and he'll hang himself. There has been his way. (On a leaf from the
first number, a button was pinned to say: "Every fat pig has its day.")
Epiphany came home to rest. I don't want the day's work. The last time I
the world's back. The world's not so much your own. How in the end
but the other side they say. Still water runs deep. You don't know
at the end of a tunnel. At the end is the devil's workshop.
There are only a few of these men of record and power. And there are still
why that are mentioned. It is unlikely that people will ever run out of
strength and power.

CARBONDALE, ILL., Feb. -- Donald G. Hileman, associate professor of journalism at Southern Illinois University, will be master of ceremonies for the annual dinner meeting of the Egyptian Council of Boy Scouts here Thursday (Feb. 25).

Hileman is chairman of the Council's Western District, host for the meeting.

Eleven Boy Scouts from Carbondale, Marion and Cairo will be presented eagle and silver awards, and winners of coveted silver beaver awards for outstanding volunteer workers will be announced. New officers of the Council will be installed at the meeting in the SIU Cafeteria.

Retiring president of the Council is Dr. R. C. Steck, superintendent of the Anna State Hospital, and one of two silver beaver award winners last year.

Council officials expect a record crowd for the meeting, which annually honors some 400 scout unit leaders and volunteers, including den mothers, scoutmasters, cubmasters and their assistants, in the Council's three districts.

Release: IMMEDIATE

CARBONDALE, ILL., Feb. -- A new graduate training program in speech and hearing rehabilitation at Southern Illinois University has won an enthusiastic O.K. from the government agency footing most of its bills.

After a four-day survey of the facilities and students involved in SIU's Speech Pathology and Audiology program, Raymond Summers of the Office of Vocational Rehabilitation in Washington said he was "more than satisfied with Southern's setup." The SIU program is one of 21 such in the nation underwritten with traineeships from the OVR.

Summers, speech pathology and audiology consultant for the OVR's training division, said he was particularly impressed with Southern's Cooperative Clinical Services Center, a working pool of specialists for many departments whose services can be brought to bear on any one case. The speech and hearing training program is only one of several in general areas of rehabilitation and special education at SIU whose clients can receive the "multi-disiplinary" attention of Clinical Services. The center's yearly case load is now over 1,000 persons from all over southern Illinois.

Directed by Hugo Gregory, assistant professor of speech correction, the program started last year under a \$13,319 OVR grant to provide traineeships (\$2,400 per year to graduate students) and some administrative expense. The three trainees currently enrolled at SIU are Clarence Haege of Freeburg, Robert Pulley of Centralia (721 E. Rhodes) and Mrs. Theodora Bach of Carbondale, wife of Jacob Bach, head of the SIU Educational Research Bureau. They are among 93 selected applicants now training in the 21 OVR-supported programs across the nation.

During his stay, Summers also visited the Marion VA Hospital, the extension clinic at St. Mary's Hospital in Cairo and the SIU camp for the handicapped at Little Grassy Lake, which along with the Clinical Services Center are practical training sites for the students. Professional on-the-job work with adult speech and hearing defectives is a major part of the program.

Joining Summers for part of the inspection trip was Marguerite Gillmore of Chicago, regional representative of the Office of Vocational Rehabilitation. The basic purpose was to pave the way for another grant request this May.

Re: Rehabilitation at Southern Illinois University has won an enthusiastic response from the government agency leading most of the bills.

After a four-day survey of the facilities and students involved in the speech pathology and audiology program, Raymond Johnson of the Office of Vocational Rehabilitation in Washington said he was "very impressed with the program."

The SIU program is one of 11 such in the nation and is the only one of several in general areas of rehabilitation and special education at SIU which clients can receive the "multi-disciplinary" attention of physical, medical, and hearing specialists. The center's yearly case load is now over 1,000 patients from all over southern Illinois.

Directed by John Gregory, assistant professor of speech correction, the program started last year under a \$13,515 OVE grant to develop traineeships for 100 persons in speech pathology and some administrative personnel. The first year's traineeship was awarded at SIU and District House of Deputies, Robert Bailey of Carbondale (VSI & Rhodes) and Mrs. Theodora Bach of Carbondale, wife of Jacob Bach, head of the SIU Educational Research Bureau. They are among 25 selected applicants now training in the SIU OVE-supported program across the nation.

During his stay, Gregory also visited the Union VA Hospital, the vocational clinic at St. Mary's Hospital in Cairo and the SIU camp for the handicapped at Little Grassy Lake, which along with the Clinical Services Center are practical training sites for the students. Professional on-the-job work with adult speech and hearing defective is a major part of the program.

Joining Gregory for part of the inspection trip was Margaret Gilmore of Chicago, regional representative of the Office of Vocational Rehabilitation. The basic purpose was to have the way for working grant request this way.

CARBONDALE, ILL., Feb. -- Representatives of the Young Presidents Organization of St. Louis will comprise a panel for the Friday (Feb. 26) session of the School of Business Lecture Series of Southern Illinois University.

The St. Louis organization is a branch of a national group composed of people who have reached the presidency of a business, realizing a million dollars or more a year in returns, before the age of 35. They will speak on the general subjects of how they obtained their positions and give interpretations of the free enterprise system which has helped them obtain and advance in their own business fields.

Of added interest is the fact that several of the men will be accompanied by their wives who will answer questions about how wives may help in the top levels of business.

Panel participants will be Robert Orchard, president of the Orchard Paper Co.; Robert Deibel, president of the Dixie Mills Co.; Joe Hunter, president of the Hunter Engineering Co., and Jake VanDyke, president of the Western Textile Products Co. Moderator will be Norman H. Spitzer, president of the Merchants Loan and Finance Co. The panel will be open to the public and will be held at 4 p.m. in the Home Economics Building on the Carbondale campus.

CARBONDALE, ILL., Feb. -- Dr. E. E. Ormiston, University of Illinois associate professor of dairy science, will speak on the future of cow pools in modern dairying at the fifth annual Southern Illinois University Dairy Day here Wednesday (March 2).

Other specialists on the program will talk on the values of breeding and feeding in increasing dairy income on the farm. Sessions will be held in Muckelroy Auditorium at the SIU Agriculture Building under joint sponsorship of the SIU animal industries department and the SIU Division of University Extension.

Besides teaching courses in dairying, Ormiston coaches the U. of I. dairy cattle judging team and manages the University's dairy farm. He has written numerous articles for farm journals and scientific publications. He obtained his bachelor's degree in agriculture and his master's and doctorate in dairy science from the University of Illinois. He will speak at an afternoon session.

Dr. Robert Lush, professor of dairying at the University of Tennessee, will also lecture during the afternoon on "Improved Pasture Management Means More Milk Dollars." Lush, a widely recognized authority on pasture improvement and cattle feeding, has been at the University of Tennessee for 12 years and has written many station publications and articles. He was employed in pasture development and soil improvement work with headquarters in Washington, D. C. for eight years.

Dr. Robert H. Touchberry, University of Illinois professor of dairy science, will discuss dairy breeding practices which will put more dollars from milk into the pockets of dairy farmers. Touchberry obtained his bachelor's degree at Clemson College. He received his master's and his doctorate from Iowa State University.

Dr. Howard H. Olson, SIU dairy specialist, will report on dairy research work at SIU at the opening session.

Henry Soborg, Breese, Ill., manager of the Southern Illinois Breeding Association, will tell how artificial breeding organizations can help the dairy farmer.

The meeting will begin at 10 a.m. Lunch will be served by the SIU Block and Bridle Club in the Agriculture Building.

CARBONDALE, ILL., Feb. -- Two non-credit adult night courses designed for owners, employers and employees of motor fleets, industries with trucking facilities and traffic employees have been announced by Southern Illinois University's Division of Technical and Adult Education.

The courses will be held at Southern Acres in cooperation with the Motor Fleet Planning Committee.

Registration and first class in Rates and Tariffs will be held Tuesday (March 1) at 7 p.m. in Room 13. This will be a study of the basic structure of tariffs, and fundamentals related to tariffs. It will include classification of commodities, rules and regulations, kinds of tariffs, functions of Interstate and Intrastate regulatory bodies, and actual checking of rates and charges. Tuition is \$14.40 and the course will be of 12-weeks duration.

Registration and first class in Efficient Terminal Management will be held Wednesday (March 2) at 7 p.m. in Room 13 of Southern Acres. This will be a study of the fundamental psychological factors in employee and human relations in industry. The final four of the 12-week study will be devoted to motor fleet safety.

CARBONDALE, ILL., Feb. -- Advice for towns interested in attracting new factories will be set forth by a dozen speakers at a March 9 conference at Southern Illinois University.

Among the topics will be "Finding Industrial Prospects," "Presenting Community Information," "Manufacturers' Questions About Illinois Communities," and "Industrial Financing."

Two directors of state industrial development agencies are on the program. They are George L. Benedict, Jr., commissioner of Tennessee's Division of Industrial Development, and James F. Cannon, superintendent of Illinois' Division of Industrial Planning and Development.

Edwin C. Kepler, business climate consultant for General Electric, will address an evening banquet, and A. C. Todd, industrial agent for the Baltimore and Ohio Railroad, will talk at the opening session in the morning.

Among area speakers on the program sponsored by SIU's department of community development are Robert E. Knittel, department chairman, and Robert S. Henderson, SIU industrial consultant; Goffery Hughes, executive director of Southern Illinois, Inc.; George M. Pendell, executive secretary of the Mattoon Chamber of Commerce, and a panel of citizens of Flora who will present a skit illustrating how that community won out over others as the location of a branch factory.

Edward Niemeyer of Townsend, Dabney and Tyson, Boston, Mass.; Ruby H. Koelling, St. Louis, branch manager of the Small Business Administration, and Byron L. Connell, chairman of the Mounds Committee of 100, will join Hughes on an afternoon panel devoted to industrial financing.

The luncheon speaker will be Dr. John E. Grinnell, new vice-president of the SIU Carbondale campus. He will discuss "Area Potential."

Fees are \$3 for registration and the luncheon, and \$3 for the banquet. A package plan registration, covering the entire program, is \$5.

URGENT: IMMEDIATE

CARLETON, Ill., Feb. -- Devotees for towns interested in attending the
conference will be met by a dozen speakers at a lunch conference at Carleton
University.

Among the topics will be "Industrial Development", "Researching Community
Development", "Industrial Development", "Community Development", and "Industrial
Development".

The objectives of the conference are to provide a forum for the exchange of
ideas and information on the development of industrial communities. The
conference is being organized by the Illinois Division of Industrial
Development, and James E. Carson, superintendent of Illinois' Division of Industrial
Development and Development.

James E. Carson, business manager for General Electric, will address
an evening session, and A. C. Cobb, industrial agent for the Baltimore and Ohio
Railroad, will talk at the opening session in the morning.

Among other speakers in the program sponsored by IUD's department of community
development are Robert E. Knittel, department chairman, and Robert E. Knittel, IUD
department chairman; Colferly Ingram, executive director of Southern Illinois, Inc.

George H. Knittel, executive secretary of the National Chamber of Commerce, and a
number of citizens of towns who will present a side illustrating how that community
went out over others as the location of a branch factory.

Howard H. Knittel, director of research, Denver and Texas, Boston, Mass.; Ruby H. Knittel,
St. Louis, business manager of the Small Business Administration, and John J. Connolly,
chairman of the House Committee on Small Business, will join Hughes on an afternoon panel.

Devoted to industrial financing.
The afternoon speaker will be Dr. John E. Grinnell, new vice-president of the
IUD Carleton campus. He will discuss "Area Potential".

Release: IMMEDIATE

CARBONDALE, Ill., Feb. -- The Southern Illinois University Foundation has launched a fund campaign to buy and install a 5.5 million volt nuclear particle accelerator for SIU's physics department.

The Foundation, a non-profit corporation which receives and administers gifts to Southern, says the proposed Van de Graaf electrostatic generator would "be a great step forward in making SIU a nationally recognized research center."

Built to accelerate particles to high energies and produce high-energy electrons, neutrons and positive ions, the generator has paved the way for many research breakthroughs in modern physics, chemistry, biology and medicine.

Most urgent goal of the drive, according to Foundation Director Kenneth Miller, is an estimated \$450,000 to erect a building for the accelerator and an identical sum to purchase the machine itself. The Foundation is also seeking money to support the accelerator program, including its operating staff. Annual operating costs are estimated at \$100,000.

Miller said governmental research support and university funds will be sought in addition to individual, foundation and corporation gifts.

The 24-foot high Van de Graaf accelerator proposed for SIU is identical to one in operation at Rice Institute. It has wide research application in nuclear physics and radiation studies, X-ray therapy, industrial radiography and electron-beam processing. Although SIU's physics department plans to use it mainly for nuclear research, it would also be available for use in other fields such as the biological sciences and by industrial specialists in cooperative studies.

RECEIVED: 2-11-50

CARBONDALE, Ill., Feb. 11 -- The Southern Illinois University Foundation has announced a fund campaign to buy and install a 7.5 million volt nuclear particle accelerator for SIU's physics department.

The Foundation, a non-profit corporation which receives and administers gifts to Southern, says the proposed Van de Graaf electrostatic generator would be a great step forward in making SIU a nationally recognized research center.

With its complete particle to high energies and produce light-ray, electronic, neutron and positive ions, the generator has paved the way for many research breakthroughs in nuclear physics, chemistry, biology and medicine.

Just west of the site, according to Foundation Director William Miller, is an estimated \$40,000 to erect a building for the accelerator and the electrical unit to purchase the machine itself. The Foundation is also seeking now to support the accelerator program, including its operating staff, through operating costs are estimated at \$100,000.

Miller says government, research agency and university funds will be sought in addition to individual, foundation and corporate gifts.

The 24-foot high Van de Graaf accelerator proposed for SIU is identical to one in operation at the University of Illinois. It has wide research application in nuclear physics and particle studies. Many theory, industrial radiography and electron beam processing.

Although SIU's physics department plans to use it mainly for nuclear research, it would also be available for use in other fields such as the biological sciences and by industrial scientists in cooperative studies.

Release: IMMEDIATE

CARBONDALE, ILL., Feb. -- If a leading American outdoor educator's dream comes true, every school in southern Illinois will soon have access to a complete field study unit.

A two-wheel trailer, equipped to accommodate scientific apparatus, reference materials, cooking utensils, food and camping equipment for 36 students on a field trip, was designed by Dr. Lloyd B. Sharp, visiting professor at Southern Illinois University. It can be built by high school or university shop classes at low cost.

Demonstrations of the Mobile Learning Laboratory, as the trailer is called, are being staged for southern Illinois school administrators. Recently a group of county school superintendents spent a day of field study with the Laboratory, witnessing first-hand what students in outdoor education programs would learn.

Sharp hopes that eventually every county in southern Illinois will own a trailer that will be available to all school districts in the county. He will send free building plans to any school interested in constructing its own mobile unit.

Sharp is national president of the Outdoor Education Association and director of the Association's national summer camp. He formerly was on the faculty of New York University, University of Chicago, and Columbia University Teachers College.

The trailer is five feet wide, eight feet long, and three feet high. It has rolls of canvas on top to form a tent structure over the trailer. Compartments in one side house food and cooking utensils, while the other side contains microscopes, textbooks, compasses, field glasses, and measuring devices.

Having reference materials and study equipment in the field allows students to look at new findings while everything is still clear in their minds. Sharp says that field study aids in subjects other than biology and natural science. It gives students something to write about; menu planning before the trip brings in the health angle; conducting surveys and figuring amounts of timber is practice for mathematics; and they can take along sketch pads for art work.

"We learn more from direct experience than from books," Sharp commented. "Also, we learn faster and retain the facts longer. Field trips are not new, but schools have never had enough."

He is hoping that the Mobile Learning Laboratory he designed will implement an increase in field study.

ANNA, ILL., March -- Dr. Joseph P. Vavra, Southern Illinois University soil scientist, will address the quarterly dinner meeting of the Egyptian Chapter, Soil Conservation Society of America, Friday (March 10), according to Chapter President Walter Parks, Anna.

The organization, composed of southern Illinois persons interested in soil and water conservation, will meet at 6:15 p.m. in the SIU Cafeteria at Carbondale.

Vavra, a member of the SIU School of Agriculture faculty since 1951, will contrast soil conservation practices in Europe and the United States in his illustrated discussion. He returned in September from a six-months' tour of a dozen western European countries to observe agricultural practices and study teaching and research programs at agricultural experiment stations and soil science institutes.

A native of Union Pier, Mich., Vavra is a graduate of Michigan State University and obtained his doctorate in soil chemistry from Purdue University. At SIU he teaches courses in soils and fertilizers and has been conducting numerous experiments on the use of fertilizers for crop production in soils common to southern Illinois.

CARBONDALE, ILL., March -- The 64-voice Washington University Choir, currently on tour under the direction of Gil Brungardt, will present a special concert next Wednesday (March 8) at 8:15 p.m. in Southern Illinois University's Shryock Auditorium. The concert will be sponsored by the SIU music department and will be free to the public.

The program will include a wide variety of choral works featuring selections by Bruckner, G. Gabrieli, J. S. Bach, Poulenc, Charles Ives, Anton Webern and Benjamin Britten.

The Choir sings regularly with the St. Louis Symphony Orchestra and last month joined that Orchestra for the first St. Louis performance of Zoltan Kodaly's "Te Deum." The Choir also has recently issued its fourth recording, an album of works by Brahms, Bartok, and Samuel Barber through traditional songs and spirituals.

Number 340 in a weekly series -- "It Happened in Southern Illinois" -- a series consisting of regional folklore and historical accounts suitable for feature, column, or editorial use.

THE BOOM DAYS OF PATENT MEDICINES
John W. Allen
Southern Illinois University

Rummaging among relics often starts a strange chain of memories. That happened recently when a small notebook filled with childish scribbings was found in an old trunk. It wasn't the scribbling that started the backward look but the trade name, "Piso's Consumption Cure", on the book's cover. First came memories of a Mr. Travis from Peoria who gave us the notebook a good lifetime ago. Then came recollections of Piso's and other "cures" proclaimed by painted signs and advertisements in the columns of the weekly papers.

Those old patent medicine ads were something different, but they were never modest. Before 1906 there was no national Pure Food and Drug Act to plague nostrum venders. Their offerings were not remedies, they were "cures" and were announced as such. Their advertisements apparently were written, with claims fully as sweeping, by the same people who wrote circus ads. There literally were hundreds of cures if the printed word was to be believed. In fact one nostrum was offered as a sure cure for 26 ills that ranged from headaches to painful feet, "if used according to directions." Did the reader doubt the claims, he had only to read the accompanying testimonials that occasionally had survived the writer.

After the coming of the Pure Food and Drug Act and more rigid postal regulations, the patent medicine approach was changed. Consumption cures became remedies and finally retreated to cough sirups. Their great claims were toned down and their chloroform content lessened. Perhaps the old-time "consumption cures" were effective in lulling some victims to their end.

Number 100 in a weekly series -- the magazine is Southern Illinois -- a series
consisting of regional, national and historical articles suitable for
column, or editorial use.

THE JOURNAL OF THE
SOUTHERN ILLINOIS UNIVERSITY

Renaming many cities states a strange chain of events. This
happened recently when a small notebook filled with children's scribbles was
found in an old trunk. It wasn't the scribbled lines that started the process but
but the words, "The Journal of the Southern Illinois University", on the back cover. When
members of a local fraternal group who gave us the notebook a good listing
of their own recollections of the old "Journal" were given. It was a list of
names and addresses in the columns of the weekly magazine. Those of
those old friends who were still living and were contacted. But they were
never met. Before 1900 there was no national Post Road and they had to
plague northern writers. Their situation was not remedied, they were "lost"
and were abandoned as such. Their addresses were apparently never written,
with claims fully as sweeping, by the same people who wrote about them. These
literally were hundreds of names in the printed word was to be destroyed. In
fact one northern writer was offered a job to write for the magazine from
headaches to painful feet. "Let me be known to the readers." But the reader
doubt the editor, he had only to read the accounts and realize that
occasionally had survived the writer.
After the closing of the Post Road and they still postal
regulations, the postal service was changed. Some people were found
remedies and finally retreated to cough syrup. Their gasconades were found
down and their chimeric content lessened. Finally the old "Journal" was
closed, were effective in inflicting some victims to their end.

When some scattered copies of a weekly paper, issued between 1850 and 1910, were scanned, it was like having a host of half-forgotten faces parade past and have their names re-echoed. For example, there was that old remedy with the intriguing name of "Cephalic Ease," which assured all that it was a specific for headache. The ad, however, did not state that "it dissolves instantly" and "affords immediate relief". Neither did it say that the relief afforded was "three way", or is it "four way" now?

Those were the days before hormones, the sulfas, antibiotics, tranquilizers and assorted wonder drugs. The magic word then seems to have been 'vegetable'. Deemed especially potent were the "secret Indian remedies" especially those ascribed to the Kickapoo. This line was peddled over America and Europe and even in Australia by roving medicine shows with their Indian members. Kickapoo was a great name among nostrums for thirty years and it made its promoters millions. A few older persons will recall seeing these shows in southern Illinois.

At one time there were literally hundreds of patent medicines sold over the counters of general stores. Some elderly persons will remember the distinctive cartons that held them and the labels they carried. A typical one of the old remedies was "Hostetter's Celebrated Stomach Bitters" with its picture of St. George slaying the dragon. (I still am wondering just why St. George should be there.) The alcoholic content of Hostetter's, once higher, finally was reduced to "25% by volume." Since medication did not render it offensive to the taste, its sales were tremendous. Its promoters became wealthy while some consumers became inebriated.

"Wine of Cardui for Women" was another widely-heralded remedy that many will remember in its yellow and black carton. They also will remember the kneeling Indian maiden, the standing white woman, and the streamer that said, "Take and Be Healed, The Great Spirit Planted It." This medicine also was very popular with men until it was loaded with too much laxative. With Wine of Cardui went "Ladies Birthday Almanac" that extolled the virtues of the wine, and of Thedford's Black Draught.

When some scattered copies of a weekly paper, issued between 1910 and 1915, were scanned, it was like having a host of witnesses. These papers and the other books referred to, for example, show that the names of the following names of "Catholic Press," which suggest that it was a special for Catholics. The ad, however, did not state that it "disclosed" anything, and "allways immediate relief". Whether this is any more the relief afforded was "three way", or is it "four way" now.

There were the days before however, the names, especially, especially, and the associated words, words. The names were then known to many, and "vegetables".

Indeed especially potent were the "secret Indian remedies", especially those ascribed to the Indians. This line was popular with doctors and nurses and even in Australia by roving medicine men with their Indian ancestry. Indeed, was a great name among doctors for thirty years and is now the promoter.

A few other persons will recall seeing these books in various libraries. At one time there were libraries in the hands of Indian natives and some of the owners of general stores. Some of these persons will remember the illustrations on the books that had them and the labels they carried. A typical one of the old remedies was "Hosanna's Celestine Balm" with the picture of St. George slaying the dragon. It still is wonderful how the St. George's Balm is there. The illustration of Hosanna's, over which, finally, was reduced to "St. George's Balm". The illustration and the name is still there on the cover, the label was removed. The present day version, which is now covered, because of the illustration.

"St. George's Balm" was another widely-spread remedy that was sold together in the early and middle periods. They also all contained the same Indian names, the same Indian names, and the same Indian names. They are all the same. The Great Spirit Balm, St. George's Balm, and the same. With one until it was found with the same label. With the name of "Hosanna's Celestine Balm", that contains the names of the same, and of the same.

Thomas's Black Balm.

While many of the patent medicines featured whiskered faces on their labels one face of a woman stood out, the face of the lady who gave to the world "Lydia E. Pinkham's Vegetable Compound," one of the all-time greats. There were Smith Bros. Cough Drops, Dr. Pierce's Golden Medical Discovery and his "Common Sense Medical Adviser" that was printed in the millions. It was a rival of "Gunn's Family Physician," another best seller.

These were followed by Paine's Celery Compound, Old Wahoo Bitters, Sarsaparilla, both Hood's and Ayer's, Sirup of Figs that never knew a fig, Radway's Ready Relief, Plantation Chill Tonic, Kilmer's Swamp Root, S. S. S. (Can't remember what it stood for), Sloan's Liniment, Castoria (both Fletcher's and Pitcher's) that soothed the crying babes, Morse's Little Liver Pills, and Doan's Kidney Pills. A photograph made more than 70 years ago shows a great sign on the north wall of a building on the site of the First National Bank of Carbondale that proclaimed it the home of Doan's Kidney Pills.

Some people still diagnose their own ills, brew their remedies or buy patent medicines and treat themselves, but the heyday of patent medicines has passed. True, they still appear on television where a colorless character appears with a mirror strapped to his forehead and begins his parrot-like chant with "doctors recommend - - "

How some people would thrill to see the immaculate spieler of old, dressed in a fawn-colored double-breasted suit, spats, wing collar, signal tie, gloves, cane and hightopper mount the tailgate of a spring wagon, look calmly over the gaping crowd, and launch into a real spiel. To those with memories of the Kickapoo Indian medicine show and the performance of the skilled pitch man of that day, the "doctors recommend", approach can only cause them to sadly shake their heads and mutter "How the mighty have fallen."

ATTENTION: FARM EDITORS.

SIU COUNTRY COLUMN
By Albert Meyer

The value of getting high milk production from dairy cows is emphasized by a progress report on production records for the Dairy Center herd at Southern Illinois University. The report was included in material presented at the fifth annual Dairy Day at SIU last week. The herd includes Guernsey, Holstein, and Jersey cattle.

By good feeding, management, and as much culling as was possible without reducing the number of cows in each breed below the needs for teaching purposes, the average annual per-cow milk production for the herd was raised nearly 3,000 pounds in three years from 7,107 pounds in 1957 to 10,092 in 1959. SIU dairy specialists pointed out that a dairy farmer probably could get a better herd average by more rigid culling.

The necessity for retaining a number of low production cows in the herd for classroom teaching purposes held the herd average down as indicated by a comparison of the low and high cows in the production records. In 1957 the low cow produced 4,192 pounds of milk while the high producer yielded 13,211 pounds. Two years later both figures had increased materially, being 6,024 and 16,355 pounds respectively.

The worth of high producing cows to the dairy farmer are plainly shown in the per cow return over feed costs. For example, the herd average return over feed costs increased from \$188 per cow in 1957 to \$299 in 1959. The low producing cow in 1959 had an above-feed-cost return of only \$172 while the high producing cow made nearly three times as much money with a return of \$539 above feed cost. The highest producing cows in the herd were Holsteins, the specialists reported.

ALL COUNTY COUNCIL
By Bill Harris

The value of getting high milk production from dairy cows is emphasized by a progress report on production records for the dairy farms of Southern Illinois University. The report was included in the official program of the 1950 Annual Dairy Day at SIU last week. The report included a summary of the progress of the dairy farms of Southern Illinois University.

By good feeding, management, and as much culling as was possible, the number of cows in each herd below the average was reduced. The average annual per-cow milk production for the farms was 5,000 pounds. In three years from 1947 to 1950, the average per-cow milk production was 5,107 pounds in 1947 to 5,000 in 1950. The report also pointed out that a dairy farmer probably could get a better farm record by more rigid culling.

The tendency for retaining a number of low production cows in the herd for classroom teaching purposes held the herd average down as indicated by a comparison of the low and high cows in the production records. In 1947 the low cow produced 4,117 pounds of milk while the high producer yielded 12,117 pounds. Two years later both figures had increased respectively to 4,325 and 12,325 pounds respectively.

The worth of high producing cows to the dairy farmer was pointed out in the per cow return over feed costs. For example, the high cow's return over feed costs increased from \$145 per cow in 1947 to \$200 in 1950. The low producing cow in 1947 had an above-feed-cost return of only \$175 while the high producing cow made nearly three times as much money with a return of \$525 above feed cost. The highest producing cows in the herd were Hallowell, the specialists reported.

CARBONDALE, ILL., March -- Alfred Eisenstaedt of LIFE Magazine will be the featured speaker at the Southern Illinois University Photo Fair March 27 in Morris Library.

John Mercer, chairman of the Printing and Photography Department, said entries will be accepted until March 15 for the Photo Fair print competitions, 11th in the annual series.

Awards will be made in 11 classifications, and the Fair is open to all photographers, amateur and professional, for pictures made since January 1, 1959.

First, second and third place awards will be given in each of the subdivisions of the news, portrait and commercial classifications. These are: News -- spot news, news feature, sports, and picture story; Portrait -- man, woman, and child under 12 years; Commercial -- live illustration, inanimate illustration, and pictorial-scenic. Prints will be displayed in Morris Library during the two weeks following the Photo Fair.

Registration for the Fair will be at 1:30 p.m. March 27 in the Library, with Eisenstaedt speaking at 2 p.m. Special skits will be presented at 3 p.m. and awards for the Photo Fair at 3:15 p.m., followed by a coffee and opening of the print exhibition.

The Photo Fair this year is being held in conjunction with the national convention of Kappa Alpha Mu, honorary photojournalism fraternity, which takes place March 25-27 at Southern.

CARBONDALE, ILL., March -- "Back to nature" will be the cry of some 60 midwestern school leaders when they gather at Southern Illinois University next week for a key conference on outdoor education.

With some of the nation's most fervent advocates of open-air learning on its speakers list, the first Midwest Outdoor Education Conference will be aimed at knitting together a unified philosophy of outdoor education and marshaling regional leadership to serve a national movement in the field.

Prime organizer of the conference, March 18-19, is Dr. Lloyd B. Sharp, executive director of the national Outdoor Education Association, a co-sponsor with SIU. Sharp, a visiting professor at Southern is the acknowledged pioneer of outdoor education as a teaching method.

"There is no doubt," says Sharp, "that students whose classroom instruction is supplemented with direct experience in nature gain a much clearer awareness of the subject. The outdoors can provide the most efficient form of learning at any grade level in almost any subject -- whether it involves a word that nature can illustrate, like 'contour,' or an abstraction that nature can illuminate, like a mathematical symbol or a poem. Most people think of outdoor education in terms of camping excursions and quick tramps through the autumn woods.

"This meeting is really designed to establish the meaning and purpose of 'outdoor education', so that it will be more widely used in midwestern schools."

Re: JAMES E. HARRIS

CHICAGO, ILL., March 11 -- "Back to nature" will be the cry of some 60 Northwestern school leaders when they gather at Northwestern University next week for a key conference on outdoor education.

With some of the nation's most famous educators and speakers like, the first Midwest Outdoor Education Conference will be aimed at uniting together a united philosophy in outdoor education and teaching regional leadership to carry a national movement in the U.S. The organizer of the conference, March 18-19, is Dr. Lloyd E. Harris, executive director of the National Outdoor Education Association, a co-sponsor with the U.S. Forest Service. Harris is a visiting professor at Northwestern and a pioneer of outdoor education as a teacher himself.

"There is no doubt," says Harris, "that to bring about classroom instruction is supplemented with direct experience in nature gives a much clearer understanding of the subject. The outdoors can provide the most efficient form of learning at any grade level in almost any subject -- whether it involves a word that nature can illustrate, like 'ambush,' or an illustration that nature can illustrate, like a mathematical symbol or a poem. What we are doing is outdoor education in terms of making connections and giving meaning through the natural world."

"This meeting is really designed to establish the meaning and purpose of 'outdoor education,' so that it will be more clearly used in education."

Among top speakers and group discussion leaders at the conference will be Dr. Shirley Cooper, associate executive director of the American Association of School Administrators in Washington; Dr. Leslie Holmes, president of Northern Illinois University; Raynold Carlson, professor of recreation at Indiana University; Lawrence Conrad and Edward Ambry of New Jersey State Teachers College; Robert Gilchrist, superintendent of Schools at University City, Mo.; Ann Brinley of the Minneapolis public schools, and Kenneth Knox of Minneapolis' Henry High School.

Participating SIU officials besides Sharp will be Vice President John Grinnell and Kenneth Miller, director of Southern's Little Grassy Lake campus.

Sharp said the conference may result in a formation of a midwestern advisory group to the Outdoor Education Association, thus tightening national organization of the movement. Conference participants are registered from Kentucky, Missouri, Indiana, Minnesota, Michigan, Iowa, Ohio and Wisconsin as well as Illinois.

"This is the first time we've ever brought this many key people together from the midwest for a fundamental review of common goals," Sharp said.

"This may result in a major boost to outdoor education as a force in elementary and high school teaching, and to the Outdoor Education Association as its source of inspiration."

(RELEASE AFTER 2 P.M. CST WEDNESDAY, MARCH 5)

CARBONDALE, ILL., March -- The "depressed area" tag is doing southern Illinois "more harm than can be undone in the next 20 years," the superintendent of the Illinois Division of Industrial Planning and Development told a conference of more than 200 area business and civic leaders here Wednesday (March 9).

"I think you have a choice of being referred to as a depressed area or having an opportunity to secure new industries," James F. Cannon told a Southern Illinois University Conference on Industrial Development. "The two are just not compatible."

Borrowing Webster's definition of "depressed," Cannon pointed to the difficulties of attracting industry to this region when it is advertised as "lowered in position, flattened, or hollowed, gloomy, dejected, and sad."

Other speakers at the conference included George L. Benedict, Jr., assistant commissioner for Tennessee's Division of Industrial Development; Mrs. Ruby Koelling, St. Louis, branch manager of the Small Business Administration, and Robert E. Knittel, chairman of the SIU department of community development, which sponsored the meeting.

Cannon's comments were made as he discussed nine questions most often asked him by manufacturers seeking plant sites. The first question he listed was: "Where can we find communities that have a good attitude?"

He said this meant towns which are well-kept and progressive, and where business, labor and local citizens are favorably inclined toward new industry. But he added that sales efforts are handicapped by the image created of a "depressed area," a term used by the U.S. Department of Labor to classify regions where there is a labor surplus.

"If I were you, I would do everything in my power to stop this kind of talk about southern Illinois," Cannon said. "It is not helping you to secure industries."

(more)

(RECEIVED APRIL 2 P.M. CASE WORKSHEET, MARCH 2)

CARROLL, ILL., March -- The "depressed area" tag is doing southern Illinois more harm than can be undone in the next 20 years, the superintendent of the Illinois Division of Industrial Training and Development told a conference of more than 200 area business and civic leaders here Wednesday (March 2).

"I think you have a choice of being referred to as a depressed area or having an opportunity to become a new industry," James T. Condon told a Southern Illinois University conference on industrial development. "The latter is not a desirable situation, however, because of the stigma attached to the word 'depressed' and the resulting loss of prestige and respectability."

Other speakers at the conference included George E. Wacker, Jr., assistant commissioner for the Illinois Division of Industrial Development; Mrs. Ruby Ewing, St. Louis, branch manager of the Small Business Administration; and Robert E. Williams, chairman of the Illinois Department of Community Development. Williams moderated the conference.

Condon's remarks were made in the afternoon when questions were often asked him by area business leaders. He said that the word "depressed" is a stigma and that the area business leaders are favorably inclined toward new industry. He added that area efforts are handicapped by the fact that there is a "depressed area" term used by the U.S. Department of Labor to identify certain areas where there is a labor surplus.

"If I were you, I would do everything in my power to drop this kind of tag about southern Illinois," Condon said. "It is not helping you to secure investment."

(Continued)

Earlier in the day, George M. Pendell, managing secretary of the Mattoon Association of Commerce, told delegates to the conference that communities which don't have the time, money and manpower needed to do a good presentation job to industry should "get out of the industrial development business until you can do the job required."

Describing Mattoon's industrial survey procedure for prospective industries, Pendell said it was "complete in every detail" because "We've anticipated every item they should know about."

"If you are not in a position to prepare a good survey, if you are short on manpower or finances and are trying to get by on a makeshift presentation," Pendell said, "you have no business being in the industrial development business. You are wasting time."

Pendell, who has helped bring industries employing 900 persons to Mattoon, detailed the contents of 10 separate sections of the industrial survey used there.

"If your presentation is a complete one, it will bring the attention of a prospect to your community," he said. "If it is factual, it meets a need. If it is straightforward, it commands belief."

Pendell reported that Mattoon recapped absentee records of labor and the history of strikes and walkouts as part of their surveys. Hiding unfavorable facts is dangerous because "they'll search them out to your sorrow if you have discolored the picture."

Mayors, chamber of commerce officers, industrialists, and representatives of civic and service organizations were among those attending the conference.

(RELEASE AFTER 7 P.M. CST WEDNESDAY, MARCH 9)

A spokesman for General Electric Co., Wednesday advised southern Illinois towns seeking new industries that "it is the spirit that counts and in the long run is usually determinative."

Edwin C. Kepler, New York, a business climate consultant for G.E., told an evening banquet audience at Southern Illinois University that his company feels it is safer to put a plant in a town that "may have some shortcomings that it is energetically trying to correct, than in another community that may be initially more attractive but which has become complacent, corrupt or dispirited."

Kepler told the delegates to SIU's industrial conference not to be discouraged if their town fails to attract one particular industry because "you may have just what the next one to come along is looking for -- assuming, of course, that you have done all you can to create the best business climate possible."

He discussed the factors G.E. considers in selecting a plant location, including local spirit and initiative, and added: "Our premise is simply this: almost any community in any state can make of itself what it will, if its people have enough concern, moral strength, energy and imagination."

Kepler alluded frequently to the "classic" story of Danville, Ill., which, after a severe cutback in coal mine employment, acquired some 60 plants with more than 10,000 workers, "by initiative and resourcefulness" and "not by going to the Federal Government for a handout."

(RECEIVED AT 4 P.M. 1931, WEDNESDAY, MARCH 21)

A spokesman for General Electric Co., Wednesday stated that the company is not making any statement that it is the policy of the company and its subsidiaries to supply electric power to the public.

Mr. E. H. Roper, vice president of General Electric Co., said in a statement that the company is not making any statement that it is the policy of the company and its subsidiaries to supply electric power to the public. He said that the company is not making any statement that it is the policy of the company and its subsidiaries to supply electric power to the public.

He said that the company is not making any statement that it is the policy of the company and its subsidiaries to supply electric power to the public. CARBONDALE, ILL., March -- A party dinner menu for the weight-loser, counting only 300 calories, was prepared and served by a weight-control class at Southern Illinois University recently.

"Good, nutritious and satisfying" was the verdict of the calory-conscious students.

The 12 women in the class, all referred by their physicians, counted their calories each day during the eight-week non-credit course taught by Dr. Jan Harper, associate professor of home economics, and conducted by the University Technical and Adult Education Division.

Each lost substantially on the 1,000-calory daily intake while preparing meals which also proved adequate and appetizing for their families -- simply by adding gravies, sauces, seasonings, etc., and serving larger portions.

"Throughout the program, they concentrated on meeting balanced nutritive requirements," Dr. Harper stressed.

The average caloric requirements for an adult woman ranges from 1,500 to 2,000, Dr. Harper said, and for an adult man from 2,400 to 3,000. Therefore, the majority of the class members, living on a 1,000-calory diet, lost from 12 to 14 pounds.

(more)

For the last session of the classs, the members decided to have a dinner party, complete with table decorations, favors, and attractive table setting. Nine of the 12 attended. The menu follows:

| | No. calories per serving |
|--|--------------------------|
| Cup bouillon | 10 |
| Green mixed salad, low-calory dressing | 7 |
| Chicken thighs, baked in foil | 170 |
| Broccoli with lemon juice | 20 |
| Summer squash with herbs | 18 |
| Frozen strawberries, no topping | 75 |
| Black coffee | - |
| TOTAL | <u>300</u> |

The low-calory dressing -- two calories per teaspoonful -- was made as follows:

1 cup water
2 tablespoons flour
1 Sucaryl tablet
1/4 cup catsup
1/2 teaspoon Worcestershire sauce
1/4 teaspoon horseradish
1 clove chopped garlic or pinch garlic salt

Cook water and flour five minutes, stirring constantly. Remove from heat, add other ingredients and beat until smooth. Cool before using.

For the last session of the class, the members decided to have a large party, complete with table decorations, favors, and attractive table settings. Most of the 18 members. The menu follows:

Cost estimated per serving

| | |
|----|---|
| 10 | Cup beefsteak |
| 7 | Green mixed salad, low-calorie dressing |
| 10 | Chicken nuggets, baked on foil |
| 30 | Beefsteak with lemon juice |
| 10 | Homemade ice cream with sauce |
| 25 | French strawberries, no toppings |
| | Black coffee |
| 30 | TOTAL |

The low-calorie dieting -- two calculated per participant -- was made as follows:

- 1 cup water
- 2 tablespoons flour
- 1 teaspoon sugar
- 1/2 cup cottage cheese
- 1/2 cup nonfat dry milk powder
- 1/2 cup nonfat yogurt
- 1/2 cup chopped fruit or lunch berries with

Cook water and then five minutes, stirring constantly. Remove from heat and add other ingredients and beat well smooth. Cool before using.

CARBONDALE, ILL., March -- A young graduate art student at Southern Illinois University has ample proof that it pays to Think Big. For the mere price of postage, he's had his work added to the collections of two of the world's leading art museums.

Tim West of Carbondale, who says he'd rather have his original prints on display in the big leagues than on the market but out of sight, sent two of them to The Louvre in Paris and one to the New York's Museum of Modern Art. Much to his astonishment, all three were accepted.

Jean Vallery-Radot, head of the "Cabinet des Estampes" for the National Library in Paris, said he had added West's prints to the Library's collection for The Louvre. The Museum of Modern Art also notified him that his single work was being retained in the archives.

West, who received a bachelor's degree in fine arts from SIU last June, is studying for a master's and specializing in printmaking. He is the son of Muriel West, lecturer in English at Southern.

(FOR RELEASE IN A.M.'s SATURDAY, MARCH 12)

CARBONDALE, Ill., March -- A pretty brunette cosmetology student has been named Miss Southern Acres of 1960 at Southern Illinois University.

Marilyn Pierce, Charleston, won the title over 47 original entries, 20 semi-finalists and six finalists. She was crowned at a coronation dance Friday (March 11).

Miss Pierce is a student in the Vocational Technical Institute program of cosmetology. Southern Acres is the name for the SIU campus 10 miles east of Carbondale where the VTI program is centered.

Other finalists were: Georgia Meagher, West Frankfort; Sue Planinc, Johnston City; Sandra Jean Terry, Mt. Carmel; Jane Crusius, El Paso, and Kathleen Richardson, Ottawa.

CARBONDALE, Ill., March--Seventeen persons have signed up for a six-week study tour of Europe offered by Southern Illinois University's School of Home Economics during the 1960 Summer Session.

Dr. Adeline M. Hoffman, professor of home economics and chairman of the department of clothing and textiles who will accompany the group, said this leaves only eight more spots open to the class in "Fashions and Textiles."

The group leaves by plane from New York June 29, returns August 14. The study tour carries eight quarter hours of graduate credit, and will include visits to the salons of leading designers to see fall fashion collections and to mills, factories and showrooms in the centers of the textile industry in nine countries.

In addition to the study of the fashion and textiles industry, visits to many points of interest in the civic and cultural life of the countries are planned.

Cost of the European Study Tour is \$1295 covering travel to Europe and return, travel in Europe, hotels and meals. University fees and the cost of travel to and from New York are in addition to the cost of the tour.

Further information may be obtained from Dr. Adeline M. Hoffman, School of Home Economics, Southern Illinois University, Carbondale.

Number 340 in a weekly series -- "It Happened in Southern Illinois" -- a series consisting of regional folklore and historical accounts suitable for feature, column, or editorial use.

SOME OTHER GHOSTS
John W. Allen
Southern Illinois University

Southern Illinois is dotted with the sites of vanished towns, places that were of service when any location three miles distant could well be an hour's travel. With improved roads and better means of transportation, fewer villages were needed and some of them accordingly faded away and became "ghosts". The same thing happened to some industries. They came, often served their purposes well, encountered competition with which they could not cope, and then finally joined the procession of ghosts.

The earliest of these industries in Illinois was that of salt manufacturing at the Gallatin Salines near Equality. White men only took over a trade here that the Indians had followed for centuries. This salt-making industry quickly became an important one to the American economy, supplying much of the midwest's needs. Now, only Nigger Spring and some scattered furnace sites with broken bits of the castiron kettles of the whites, and sherds from the baked clay pans of the Indians, remain. A recently-built dam has made a lake of Half Moon Lick. Little else is left.

About 20 miles away to the south in Hardin County another community had a place for iron production. This began with the building of Illinois Furnace there in 1837, continued steadily until 1873, then was operated at intervals until 1883 when it was permanently discontinued. Ruins of the furnace still stand. There are overgrown piles of charcoal used as fuel and some low mounds of unused iron ore on the bluff against the furnace. Parts of the foundations for the vanished machinery still are in place.

2015-11-11 11:11:11

A stone marker a mile or so away from Illinois Furnace marks the site where Martha Furnace, a second smelter, was built. The villages that grew up about each of these furnaces are entirely gone. Three additional furnaces were built later at Grand Tower in Jackson County; they, too, are gone. All of these were small by today's standards but they were important then. Illinois Furnace supplied much-needed iron to the United States Naval Yards at Mound City and Cairo during the Civil War. The ruins of Illinois Furnace about four miles north of Rosiclare may still be seen, but one has to look carefully to find the furnace slag and rubble that mark the location of the others.

Coal mining also has left many ghosts in southern Illinois. One of these is at the low bluff on the east bank of Big Muddy River where old Route 13 enters Murphysboro. Coal first was mined and shipped from here to New Orleans about 1810. Other outcroppings were worked near Equality and Belleville. With the opening of numerous shaft mines in the southern Illinois field, mining became the region's major industry, one that brought to it thousands of workers to make the region an important part of the "melting pot" where peoples of many nationalities were fused into Americans.

Here and there in various towns, one sees tall old buildings that seem to stand apart. Many of them have fallen into decay. Some are converted into grain elevators and others serve as sales centers for commercial feed and farm equipment. These once were the mills that ground the grain of Egypt. There were a good hundred of these, not including the countless water mills that preceded them. Many of these old mills would be truly ghostly if only the dusty gray miller of yore could come to stand in the doorway.

Just as the land between the rivers that bound Egypt has its myriad of ghosts, the rivers have their fleets of phantom craft. About all one sees now is a tow of enormous, prosaic-looking barges plodding along, or some small motor boats skimming about. The canoes, flatboats, rafts, rowboats, stern and sidewheel steamers, keelboats and showboats, and contrivances that served as floating homes are gone from the rivers. Once as many as 125 steamers would dock at Cairo in a day. Now it is a rare sight to see one. But, strange as it may seem, the rivers carry more tonnage today than at any other in their history.

With the thousands of cattle wanted during the winter, it
was necessary that there be places to hold and pen them. One of
these, a principal place, was at Mount City on the Ohio. Here many cattle
were held and others of Indian stock were kept for shipment. This was "Horse W. 120"
was situated and the hill toward the south was a double whorl.
This was a place where there is a hot water you can come and watch the
cattle drift by.
There are many other "ghosts." For instance, there are many led on the
knows all the things that are done when millions of pounds of Indian were
from in the region. Excavations show the number of a year will be
winter's looking on the Ohio a century ago. Old traditions are historical records
valuable in the time when the Indian was a hunter and a warrior and a

Southern Illinois University was opened for classes on Sept. 6, 1924, with 143 students enrolled.

In 11 years from 1924 to 1935, Southern Illinois University resident enrollment jumped from 2,000 to 11,304 students.

There are presently 319 temporary buildings in use by Southern Illinois University for classes, housing and research. Of these, 128 are on the Carbondale campus alone.

Southern Illinois University was the first institution in Illinois to activate a four-year degree program in forestry on Jan. 1, 1931.

Since the post-war enrollment peak, Southern Illinois University enrollment has grown faster than all other Illinois state-supported universities combined.

More than 50 percent of SIU's student body from Illinois and 75 percent are residents of the 31 surrounding counties.

The Southern Illinois University Board of Administration has activated three of five proposed farm management units, called farm units, which are operated as commercial farms combining certain farm enterprises thought suited to Southern Illinois farming conditions.

The present valuation of Southern Illinois University's plant and equipment is \$40,000,000.

ATTENTION: FARM EDITORS

SIU COUNTRY COLUMN

By Albert Meyer

Although the weather has gone contrary to the calendar during the past two weeks, the urge to plant something is developing apace among gardeners and farmers who like to work in the soil. Among the gardeners some concentrate on growing vegetables, others on producing beautiful flowers. Most persons with a bit of garden or lawn space will grow some kind of flowers to add a touch of beauty and fragrance to the homestead.

Roses are one of the most commonly grown flowering plants, but not all take the time and patience that are needed for a beautiful rose garden. Any good garden soil will produce fine roses, according to Irvin Hillyer, Southern Illinois University floriculturist.

If the soil is known to be poor, as when subsoil from a basement excavation is used to level off the building lot, special soil preparation is necessary. Add some organic matter, such as peat, leafmold, or well-rotted manure and mix it well with the top 12 or 18 inches of soil at the rate of about one bushel of manure to six of soil, or one part of peat or leafmold to four parts of soil. Prepare the soil well in advance of planting.

If possible rose plants should be set out as soon as they are received. Cut off all dead or injured growth from the roots and tops before setting in the soil. Work the soil carefully about the roots and add water to help settle the soil.

Roses require large amounts of water although they should be planted in well-drained areas. Regular watering is necessary during drouth periods. Apply slowly from a hose so that the water soaks into the soil to a depth of eight inches or more.

Cultivation must be done carefully because rose roots grow rather close to the surface. Scrape off or pull the weeds which rob the roses of moisture. Many gardeners use rather heavy mulches on rose beds to control weeds and conserve moisture. In using fertilizers, gardeners often overfeed roses. Judicious use of fertilizers will help in producing superior blooms but this will not replace good general care, including watering and spraying.

ANNUAL REPORT
BY TOWN ENGINEER

Although the weather has been generally to the advantage during the past two weeks, the high to light rain is developing some among gardeners and farmers who like to work in the soil. Among the gardeners some are busy on growing vegetables, others on producing beautiful flowers. Those who have a bit of garden or lawn space will grow some kind of flowers, and a touch of beauty and fragrance to the landscape.

Roses are one of the most commonly grown flowering plants. But not all take the time and patience that are needed for a beautiful rose garden. But good garden soil will produce fine roses, according to Ivan Illness, University of Illinois.

If the soil is known to be poor, as when selected from a natural meadow, it is best to level off the building lot, special soil preparation is necessary. Add some organic matter, such as manure, leafmold, or well-rotted straw and mix it well with the top 12 or 18 inches of soil at the rate of about one barrel to 100 square feet. If one part of compost or leafmold is to be used, prepare the soil well in advance of planting.

If possible rose plants should be set out as soon as they are received. The soil all about or around growth from the roots and top before setting in the soil. Work the soil carefully about the roots and add water to help settle the soil. Roses require large amounts of water although they should be planted in well-drained areas. Regular watering is necessary during growth periods. Apply slowly from a hose so that the water soaks into the soil to a depth of eight or ten inches.

Competition must be done carefully because rose roots grow rather close to the surface. Dig up or pull the weeds which rob the roses of moisture. Many gardeners use rather heavy mulches on rose beds to control weeds and conserve moisture. The use of fertilizers often overtaxes roses. Fertilizers are of little use if the soil is good. Fertilizers will help in growing superior blooms but this will not replace good general care, including watering and pruning.

CARBONDALE, ILL., March -- Southern Illinois University has been allocated \$50,900 by the Illinois Department of Agriculture to conduct three agricultural marketing research studies.

The SIU projects will deal with the quality, pricing, and marketing of eggs and with the marketing of tree-ripened peaches, according to a joint announcement by Dr. John O. Anderson, SIU Graduate School assistant dean and research coordinator, and Dr. W. E. Keepper, dean of the SIU School of Agriculture. The funds are from an appropriation of \$250,000 to the state Department of Agriculture by the 71st General Assembly for research in marketing, marketing processes, and new ways to use Illinois agricultural products.

The SIU research contracts, along with \$117,000 worth of research by the University of Illinois, have been approved by Stillman J. Stanard, Illinois director of agriculture, who administers the appropriation. Initial announcement of the total program was made by Stanard's office last week.

Dr. Herman Haag, SIU visiting professor of agricultural industries, will supervise one \$20,000 SIU project in which there will be an economic appraisal of egg marketing agencies and the egg marketing and pricing methods practiced in Illinois. Determining improvements in marketing and price reporting systems will be a part of the study.

Dr. Scott Hinners, SIU associate professor of animal industries and secretary of the Illinois Egg Council, will join with Dr. Walter J. Wills, a farm marketing specialist who is chairman of the SIU agricultural industries department, in a two-part assignment for \$23,900 worth of research. Hinners will study improvements in determining egg quality and for controlling quality in marketing. The object will be to reduce handling costs. Wills will test consumer acceptance of quality eggs through a marketing study.

Wills and Dr. James B. Mowry, superintendent of the cooperatively-operated Illinois Horticultural Experiment Station at SIU, will jointly conduct a \$7,000 research project on the marketing of tree-ripened peaches. They will study marketing problems and seek solutions for them and will test market acceptance of new varieties of peaches.

All projects are to be completed by June 30, 1961.

CARBONDALE, Ill., March--Problems and methods of improving public library facilities will be major program topics for the annual Public Library Institute at Southern Illinois University Monday and Tuesday (March 21-22).

Headlining the program will be Dr. Harold Goldstein, Urbana, University of Illinois associate professor of library science; Charles E. Haggerty, librarian of the Danville public library; and Kenneth Bradley, president of the Sparta public library board of trustees. The institute coordinator will be Miller Boord, librarian of the Southern Illinois Regional Library at SIU. The regional library, SIU, and the Illinois State Library are joint sponsors of the institute.

Institute sessions Monday will be in the SIU Morris Library, beginning at 9 a.m. with registration. During afternoon sessions Prof. Goldstein will discuss what to do in redecorating or remodeling library buildings, and Haggerty will outline methods. Bradley will speak at the 6:30 p.m. dinner session in Engel's Restaurant.

The institute group will tour the new Herrin City Library Tuesday morning and hear a panel discussion on planning and constructing new library buildings. Panel members will be Mrs. Maude B. Owen, Herrin city librarian; Anthony Venegoni, president of the Herrin library board; and Snyder E. Herrin, city attorney.

Also participating in the Institute program will be Mrs. Laura C. Langston, head consultant, and de Lafayette Reid, assistant librarian, Illinois State Library; Dr. Ralph E. McCoy, SIU director of libraries; Miss Elizabeth O. Stone, SIU assistant librarian; Mrs. Margaret Baird, Centralia public librarian; and George Heise, bookmobile librarian for the Southern Illinois Regional Library.

CARBONDALE, ILL., March -- Gerald R. Krawzyk of Carbondale (612 South Logan), a Southern Illinois University senior majoring in animal industries, is one of 1,200 college students in the nation selected by competitive examinations to receive National Science Foundation fellowships for graduate work next year. He plans to continue as a graduate student in dairy science at SIU after he wins his bachelor's degree in June.

For Krawzyk, who is married and has three small children, the fellowship will amount to approximately \$3,800 -- a grant of \$1,800 for the year plus \$500 additional for each dependent. His wife is the former Sula Kay Van Cleve of Carbondale. Their two daughters and son -- Debbie, Kathy, and James Robert -- range in age from two and one-half years to six months.

Krawzyk, the only SIU student to receive one of the coveted Fellowships, is the son of Mrs. H. Krawzyk, 921 North 20th, Murphysboro. He graduated from the Murphysboro High School in 1951 and served in the U. S. Army for two years before entering SIU.

In addition to maintaining a 4.6 (of a possible 5-point) grade average at SIU, Krawzyk has held down a full-time job as a Dairy Herd Improvement Association supervisor for the past two and one-half years taking and testing milk samples monthly from 14 dairy herds in Jackson, Perry, Union and Williamson counties. He is chancellor of the SIU Agriculture Honorary Fraternity, had an SIU scholarship and activity award in 1958-59, and had the highest grade average among the SIU agriculture students as a sophomore in 1957-58.

CARBONDALE, Ill., March -- Southern Illinois University's top debate team, juniors Keith Sanders of Benton and Kent Brandon of Carbondale, head for Notre Dame University this week-end (March 18-19) to compete for a berth in next month's national championship tournament at West Point.

The District Five regional eliminations at Notre Dame will bring together top midwestern teams in an intercollegiate scramble for five regional qualifying tickets to West Point. Southern, defending champion in the event, has qualified three times in the past five years, but has yet to get past the quarterfinals at West Point.

Prospects for Coach Jack Parker's twosome look good. Sanders, a veteran of national championship competition, was ranked ninth best speaker in the U.S. and first in the region last year as a sophomore, won the state oratory contest this year, was chosen top speaker in the Notre Dame Invitational Tournament this year and with Brandon has maintained a 70 percent-plus winning record in tournament competition. Of all teams to be represented at the regional meet, only Notre Dame has decided SIU this season.

CARBONDALE, ILL., March -- The third annual Cooperative Kiln Drying Course will be offered March 21-25 at the University of Illinois, according to W. W. Rice, coordinator of Southern Illinois University's Vocational Technical Institute program in Wood Technology.

The program is a cooperative effort of SIU, the University of Illinois, Iowa State University, Michigan State, Michigan, and Purdue Universities, and six commercial companies.

Rice said the course is the only one of its kind for management personnel, salesmen, beginning and experienced kiln operators, yard foremen, plant superintendents, lumber inspectors, and foresters involved in the kiln drying field.

During the five-day course, registrants will receive lectures along with practical experience in operating a dry kiln.

The program will include structures of wood and moisture content on the first day; how lumber dries (including costs and problems) the second; types of dry kilns and kiln equipment on the third; a continuation of equipment and operation plus maintenance the fourth; new methods of drying lumber (including chemical seasoning, solvent drying and high-temperature drying) on the fifth.

The course was held at SIU in 1958 and at Michigan State University in 1959.

CARBONDALE, ILL., March -- About 30 of Southern Illinois University's 101 forestry students will take to the woods on March 28 as they begin their Spring Forestry Camp experience. The camp enrollment is nearly double that of last year

The Forestry Camp, continuing throughout the spring term, provides part of the professional training required of all students who expect to earn a bachelor's degree in forestry at SIU. Most of the time they will be in the forests or on field trips to wood-using industries, mixing the practical with the theoretical in six forestry courses that comprise the Spring Camp program, according to Dr. Neil Hosley, SIU forestry department chairman. Most of the students take the camp program during their sophomore year.

Headquarters for the camp will be in a former CCC barracks building at Giant City State Park near Makanda. The park, the Shawnee National Forest, the Illinois State Forest and Tree Nursery, and the nearby Crab Orchard Wildlife Refuge will be utilized for field work and lectures. The courses included in the camp program are: forest fire control, silvics (environmental factors and the natural laws of forest development), silviculture (the art of producing and caring for a forest), utilizing forest products, forest recreation, and forest mensuration (measuring forest crops).

The spring camp faculty will be composed of three SIU forestry department staff members. Dr. John Hosner will teach silvics and silviculture, Dr. Ronald Beazley will teach forest recreation, and James F. DuBuar, the camp director, will teach fire control and forest mensuration courses. DuBuar, a visiting professor at SIU, was for 37 years director of the New York State University College of Forestry Ranger School at Wanakena, N. Y.

Favorable climatic conditions and SIU's convenient location near the state's most densely forested regions make possible the spring forestry camp in which students may participate at about the same cost as for on-campus classes, Hosley explains. The spring term camp plan also permits students to obtain summer jobs with private and public forestry agencies which provide additional practical experience.

CARBONDALE, ILL., March -- Bishop Charles Brashares of Chicago will be keynote speaker for the first Convocation for Youth Workers being planned by southern Illinois Methodists this weekend.

Laymen who work with the Methodist Youth Fellowships in churches within a 30-county radius will meet Friday through Sunday (March 25-27) on the campus of Southern Illinois University. Delegates will be housed in the Thompson Point dormitories and meetings will be held in the Agriculture Building.

The Rev. Lewis Durham of the General Board of Education, Youth Department, Nashville, Tenn., will be a resource person in the field of group dynamics. Others on the program will include Rev. William Hahs, pastor of the Pinckneyville Methodist Church and chairman of the Committee of Youth Work for the area board of education, and Miss Vaudra Rushing, Mt. Vernon, Southern Illinois Conference Youth Director. Area ministers and a small group of young southern Illinois church members will assist in the programming.

This is the first conference-wide training program for youth leaders to be held in southern Illinois. Formerly such work has been done by sub-districts. Cost of the meeting will be \$15 per person and registrations may be sent to Miss Vaudra Rushing, 107½ South Tenth Street, Mt. Vernon.

CARBONDALE, ILL., March -- A group of 165 selected high school juniors and seniors from throughout the nation will study at Southern Illinois University this summer in a basic science program designed for high-ability students.

Sponsored by a \$18,550 grant from the National Science Foundation, the seven-week program will offer selected students college-level study and laboratory experience in eight subjects: mathematics, physics, physiology, microbiology, chemistry, geography, geology, zoology and botany. Each student will spend two weeks at SIU, studying in two closely related subject areas, such as mathematics-physics, zoology-botany, and so on. Twenty top-ranking students out of the entire group will be invited to spend a third week participating in research projects under supervision of SIU faculty members.

The SIU program is one of 137 being conducted this summer at U. S. colleges and universities in the NSF's second Summer Science Training Program for Secondary School Students. Other Illinois schools selected for training are the University of Illinois, the Illinois Institute of Technology, University of Chicago, Northwestern and Knox College.

Dr. Leo Kaplan, associate professor of botany at SIU who will direct the program, said this summer's course series will be smaller but more intensive than a similar one here last year. Then, more than 240 students participated in a 12-week series of nine basic science courses. Most of them, however, took only one week-long course. "This year," says Kaplan, "the courses will be tougher and the students will be in class most of the day while they're here."

CARROLL, JR., has been selected as a member of the group of 100 selected from among the students and faculty of the University of Chicago who will study at Southern Illinois University this summer in a basic science program designed for high ability students. Sponsored by a \$10,000 grant from the National Science Foundation, the summer program will allow selected students to study in laboratory and classroom in eight subjects: mathematics, physics, chemistry, biology, geology, astronomy, psychology, and sociology. Each student will spend two weeks at each of the four sites, with a total of eight weeks of study. The program is designed to provide a broad background in the basic sciences and to allow students to work with leading scientists in the field. The program is one of the most intensive of its kind in the country and is expected to produce a high level of achievement in the students who participate. The program is being conducted in cooperation with the University of Chicago and the Southern Illinois University system. The program is expected to be completed by the end of the summer.

- 2 -

Another change will be the amount of financial aid available to accepted candidates. Last year, under terms of Foundation support, room, board and travel stipends were available to almost all students. This summer, allowances to individual students will be made on the basis of need. Some candidates may get a full ride but in most cases, Kaplan said, only half the estimated travel and living costs will be paid.

Apparently, however, the new restrictions haven't dampened any high school hopes. Kaplan has already received applications from 25 states and the deadline is three weeks away (April 7). Those accepted will be notified by April 15, after which they will have another 15 days to accept or decline the invitation.

Further change will be the amount of financial aid available to accepted candidates. Last year, under normal conditions, travel, room, board and travel expenses were available to almost all students. This summer, allowances to individual students will be made on the basis of need. Some candidates may not be able to pay in most cases, Kaplan said, only half the estimated cost and living costs will be paid.

However, the new restrictions haven't deterred any high school seniors. Kaplan has already received applications from 11 states and the deadline is three weeks away (April 1). CARBONDALE, ILL., March -- A series of guidance tests to help classify new college students this spring will open April 2 at Southern Illinois University. Southern is cooperating with other state-supported universities in Illinois which have adopted a basic common test battery for entering students.

Fifteen other centers in the southern Illinois area will offer the tests in coming weeks.

Test results are used in general academic advisement and to place students in the appropriate sections of English, mathematics, and chemistry. Test results also are used in general counseling, as a basis for awarding certain scholarships, and for placing students on student jobs. Test periods run from 3:30 a.m. to noon and from 1 until 4 p.m., with the exception of those scheduled at the Chicago Navy Pier which require two consecutive Saturday afternoons.

All entering freshmen at SIU are expected to take the test prior to the time they register. Transfer students are expected to take the tests unless they have scores forwarded from their former schools. Vocational Technical Institute students desiring the two-year associate degree should plan to take the test but those students working for a one year certificate (welding, cosmetology and practical nursing) are excused if they are not in the lower quarter of their high school class.

Spring test centers in southern Illinois will be:

ALTON: SIU Alton Center, Chapel Auditorium, Room 5, May 21.

BENTON: Benton Consolidated High School, Study Hall, May 7.

CAIRO: Cairo High School, Library 204, May 14.

CARBONDALE: SIU Muckelroy Auditorium, April 2 and May 21.

CENTRALIA: Centralia Township High School, April 23.

EAST ST. LOUIS: SIU East St. Louis Center, Room 113, April 30 and May 21.

FAIRFIELD: Fairfield Community High School, Study Hall, May 7.

HARRISBURG: Harrisburg Township High School, B Study Hall, May 14.

ATTENTION: FARM EDITORS

CARBONDALE, ILL., March --Putting a portable rain-tight roof on lumber piles stacked for air drying would be a paying practice for sawmill operators, according to an article by two U. S. forest service technologists formerly stationed with the Carbondale Forest Research Center at Southern Illinois University.

Wendell P. Clark and Thomas M. Headlee, writing in a lumber industry periodical, The Southern Lumberman, report that roofing lumber piles speeds up drying and reduces weather damage to lumber. The report is based on a 1953 study at the Kaskaskia Experimental Forest in Hardin County, a 3,000-acre research area for the Carbondale Forest Research Center.

Roofed and unroofed piles of red oak and yellow poplar lumber were compared in the study. They found that red oak lumber responds more favorably to roofing than the yellow poplar, but concluded that the sawmill operator can cut off enough in drying time and lumber quality to save three or four times the \$25 cost of making a sturdy pile roof that can be placed on or removed from lumber piles with a fork-lift truck.

They report that in a 90-day test period roofed oak lumber averaged two to eight percent lower in moisture content than unroofed lumber and had 30 percent less decline in lumber grade. Oak lumber in the top tiers of unroofed piles showed much surface checking caused by frequent rains. Roofing made little difference in the drying rate for yellow poplar lumber although the amount of warping of lumber in the upper tiers of the stacks was reduced.

CARBONDALE, ILL., March -- A power feeding unit on woodworking machines can increase production from 50 to 80 percent in such straightline operations as shaping, ripping, rabbeting, and similar jobs, according to Daniel E. Dunmire, a technologist with the Carbondale Forest Research Center at Southern Illinois University.

In studies at the Wood Products Pilot Plant operated by SIU and the Research Center at the Southern Acres campus east of Carbondale, Dunmire found that power feeding boosted production in center matching nine-sixteenths inch red oak sheathing 50 percent (600 linear feet per manhour). Production of one and five-sixteenths inch stock was increased 83 percent.

Power feed units also lessen operator fatigue and create more uniform production, he says. "In production shops, especially where runs are long, these benefits will soon pay for a power feeder," he added.

CARBONDALE, ILL., March -- An estimated 500 southern Illinois high school students will display home and classroom-made scientific exhibits at the annual Southern District Science Fair Saturday (April 2) at Southern Illinois University.

The exposition is a preliminary judging affair for the Illinois Junior Academy of Science meeting in Urbana the first weekend in May. Last year, 51 first-rated exhibits out of a total of 250 projects went on from the SIU Fair to the state meeting.

Dr. Willard Gersbacher, SIU professor of zoology and district chairman of the Junior Academy, said he expected "close to 300" exhibits this year. Young scientists can enter projects in fields ranging from aeronautics to zoology. One of last year's award-winning entries was a homemade electronic digital computer constructed by a Carmi student.

Exhibits will be set up and judged in the gymnasium of University School and will be open for inspection by the public from noon to 4 p.m. The district Junior Academy members will elect new officers at 1 p.m., with current chairman Janet Marchildon of Chester Community High School presiding.

Entertainment will include a 30-minute concert by the Angelaires, SIU Air Force ROTC auxiliary singing group, and two films: "Experimental Study of Emotional Responses of Monkeys Under Different Patterns of Mothering," a unique study by the University of Wisconsin psychology laboratories, and Walt Disney's "Beaver Valley." Awards will be made at 3:30 p.m. in Furr Auditorium of University School.

CHICAGO, ILLINOIS

CHICAGO, ILLINOIS, April 28 - An estimated 500 students of Illinois high schools
and colleges will display their work and exhibits at the annual
Southern District Science Fair Meeting (April 28) at Southern Illinois University.
The exhibition is a preliminary judging affair for the Illinois Junior
Academy of Science Meeting in Urbana the first weekend in May. Last year, 11
first-rated exhibits out of a total of 250 projects were selected for the JNU Fair at
the same meeting.

Dr. William F. Fennell, JNU professor of zoology and a past chairman of the
Junior Academy, said he expects "about 300" exhibits this year. Young
scientists can enter projects in fields ranging from mathematics to zoology. One
of last year's award-winning entries was a homemade electronic digital computer
constructed by a fourth grader.

Exhibits will be set up and judged in the Gymnasium of Southern Illinois University
and will be open for inspection by the public from noon to 6 p.m. The district
Junior Academy meeting will also have new exhibits at 1 p.m., with current chairman
James MacMillan of Chester Community High School presiding.

Interests in the fair include a 30-minute concert by the Angelina, 211 Air
Force ROTC auxiliary singing group, and two films: "Experimental Study of
Emotional Responses of Rats Under Different Patterns of Isolation," a unit
study by the University of Wisconsin psychology department, and "The Discovery
of 'Heaven Valley.'" Awards will be made at 3:30 p.m. in four sessions of
University Council.

Release:
AFTER 10 A.M. WEDNESDAY (MARCH 30)

ST. LOUIS, MO., MARCH -- Television sets will be standard equipment in every elementary school classroom in 1985, says Dr. J. Murray Lee, chairman of the department of elementary education of Southern Illinois University and breakfast speaker for the Wednesday (March 30) meeting of the Illinois Elementary Principals meeting here.

Lee stated that an increased interest in public education will bring unprecedented advances in grade schools during the next 25 years.

School buildings will be one-story structures accommodating between 500 and 1,000 students, with each building having a health and psychological center, a library, cafeteria, swimming pool, multi-purpose room, outdoor areas and work laboratories. Each classroom will have, besides the TV, a tape recorder, record player and typewriters.

Typing will become a universal skill, Lee believes. Another innovation will be pencil sharpeners built into each desk.

Use of teaching machines, TV and tape recorders will give students a working knowledge of a second language and will open broader areas of social sciences, Lee said. These devices will also give the teacher more time to give special attention to exceptional children. Especially gifted pupils will be given work designed to stimulate their intelligence while breakthroughs in biochemistry will assist children with learning and emotional problems.

Increased staff for each school will include a supervising principal, school secretary, and secretaries for every four to six classroom teachers. Each teacher will have a master's degree and an area of specialization, according to the SIU professor. Primary grade teachers will continue with the same class for at least two years.

THE UNIVERSITY OF CHICAGO

Three areas that will see marked change will be physical education, use of outdoor recreation, and teaching of reading. Provision will be made for muscular development for all children, with specific help for individual cases, Lee predicts. School camping and exchange visits both in and out of the country will become more common.

A projected plan for the teaching of first grade reading will have students drawing pictures and telling their teachers the story their picture represents to them. Their original stories will be recorded on a dictaphone or tape and later transcribed for the child's own reading.

This approach, he pointed out, will develop more open-mindedness and questioning on the part of the student rather than the mastering of set procedures.

Parents, too, will find their position changing in these schools with more constant contact between parent and teacher. Parents will be used as resource leaders, and Phonovision will be used for parent-teacher conferences. Consultants will be available to work with parents of children with special problems.

Lee's educational theories also are before educators in the May issue of "Educational Leadership". Revolutionary as they may sound to the laymen, Lee asserts that a number of schools throughout the nation are already employing some of them.

Lee admits, however, ~~that~~ "certain problems will undoubtedly prove to complex for solution, even by automation." These include "dogs following boys to school, missing handkerchiefs, and one lost overshoe."

There is no doubt that all the material which will be presented to the students of the course will be of the highest quality. The material will be presented in a way which will be most helpful to the students. The material will be presented in a way which will be most helpful to the students. The material will be presented in a way which will be most helpful to the students.

CARBONDALE, ILL., March -- Southern Illinois University's government department will conduct a class some 3,000 miles from the Carbondale campus this summer -- at the West German seaport of Hamburg.

"Development of German Democracy," a senior and graduate level course, will give students eight quarter-hours of credit, a month-long schedule of lectures (in English) at the University of Hamburg, tours to Luebeck, Travemuende and the Baltic Sea, a night at the opera, lodging and meals in private homes and round-trip travel via Lufthansa Airlines. The approximated cost: \$920.

The formal study program, offered in cooperation with the University of Hamburg, will include lectures by West German government and political leaders as well as prominent Hamburg faculty members and Drs. Hellmut Hartwig and William Winter of the SIU staff.

Winter, associate professor of government and former Fulbright lecturer in Austria, will direct the study tour. Hartwig, professor of German and a native of the host country, will supervise technical details and coordinate the program.

Class members will leave Chicago July 16 and arrive in Hamburg the following day to begin a week-long orientation program that will include talks on modern Germany and its constitutional development. Course work will start July 25 with final examinations on Aug. 20.

Winter said "multi-stopover plan" tickets will entitle participants to spend as much time as they wish after finals visitng other European cities on their own at no extra airfaire. Their expenses during this time aren't included in the \$920 "basic cost," however.

- more -

1945 : 1945

- 2 -

The approximated cost includes "every foreseeable expense from July 16 to Aug. 21," according to Hartwig. A total of \$141.50 is to be paid on application to cover SIU fees and a down payment on flight fare. The rest of the fare is to be paid before May 15, unless fly-now, pay-later arrangements are made. Fees for Illinois students will be \$41.50, and for out-of-state students \$37.50 extra.

Winter said study at Hamburg will center on the influence of German history on present problems, the implications of West Germany's new constitution and the rise of an economic, social and political European community keyed to West Germany. Chief among Hamburg faculty lecturers will be Political Scientist Siegfried Landshut. The secretary general of the German Bundestag will be among guest lecturers the second week.

Applications are now being accepted by Hartwig, in care of the SIU foreign language department.

- pb -

The estimated cost includes "every foreseeable expense from July 15 to Aug. 31," according to Harburg. A total of \$141.10 is to be paid on application to cover TU fees and a down payment on flight fare. The rest of the fare is to be paid before May 15, unless 15-day pay-later arrangements are made. Fees for Illinois students will be \$41.50, and for out-of-state students \$57.50 extra.

Harburg said study at Harburg will center on the influence of German history on present conditions; the implications of the German's new constitution and the role of an economic, social and political European community based on West Germany. Other Harburg faculty lecturers will be political scientists Christian Lachmann. The faculty board of the German Embassy will be among those lecturers. The second round of applications are now being accepted by Harburg, in care of the TU Berlin Language Department.

CARBONDALE, Ill., March-- A series of campus tours has been scheduled at Southern Illinois University through the Spring for parents of students, visitors and tourists.

The tours, to be conducted by SIU student leaders, will take in classroom buildings, Morris Library, the Museum, residence halls, Campus Lake, and other areas.

Appointments for the tours are not necessary. Each will originate from the visitor's parking lot next to the President's Office.

Times and dates for the tours are:

Saturdays, 10 a.m. and 2 p.m. on April 2, 9, 16, 23 and 30, May 7, 14 and 21 and June 4.

Sundays, 2 p.m., on April 3, 10, 17 and 24, May 1, 8, 15 and 22, and June 5.

CARBONDALE, Ill., March -- A workshop designed to help professional workers of the Heart Association will be held Monday through Thursday (April 4-7) at Southern Illinois University.

Professional and volunteer workers for the Heart Associations of Illinois, Indiana, Iowa, Missouri, Kentucky, Michigan and Ohio will attend.

Sponsors for the meeting are the Illinois Heart Association and the Division of Extension and Area Services of Southern. Sessions will be held in the Agriculture Building on the SIU campus.

Subjects to be covered will include community organization and development, the role of volunteer agencies in the community, medical and psychological problems of the cardiac patient, and the role staff members of volunteer organizations play in promoting community action.

Among those involved in the program will be Richard Franklin, Frank Kirk, Robert Child and Robert Knittel, all of SIU's community development department. Ernest Doleys and Tom North will represent the SIU Rehabilitation Institute.

ATTENTION: FARM EDITORS

CARBONDALE, ILL., March -- A \$1,000 grant from the Phillips Petroleum Co., Bartlesville, Okla., for anhydrous ammonia fertilizer studies at Southern Illinois University was announced today by Dr. A. B. Caster, chairman of the SIU plant industries department.

The grant will support 1960 research studying what effect the oxidation of anhydrous ammonia has on making rock phosphate more available to farm crop plants. This is the third successive annual grant from the firm for SIU fertilizer studies, Caster says.

Dr. Joseph P. Vavra, associate professor of plant industries, supervised the projects the past two years. Assisting in the work last year was Noble Usherwood, SIU plant industries graduate student from Atlanta (Ill.). Caster will supervise the 1960 program while Vavra is on leave for study in Europe.

The 1959 work included a preliminary study of the effect of anhydrous ammonia on the availability of rock phosphate and continued 1958 studies of the effect of various application rates on the yield of corn growing on soils of high and low basic fertility. A progress report just issued on the company-supported work so far shows that:

1. Anhydrous ammonia fertilizer made more phosphorus available to plants than did any of four other nitrogen carriers -- ammonium sulphate, ammonium nitrate, sodium nitrate, and calcium cyanamid -- but there was no material difference between them in their effect on the per-acre yield of corn last year.

ATTENTION: FARM MANAGERS

CARBONDALE, ILL., March 22 -- A \$1,000 grant from the Illinois
Department of Agriculture, for anhydrous ammonia fertilizer
research at Southern Illinois University was announced today by
Dr. E. D. Carter, director of the IIV plant industries department.
The grant will support 1960 research studying what effect the
oxidation of anhydrous ammonia has on making rock phosphate more
available to farm crop plants. This is the third consecutive annual
grant from the IIV for fertilizer studies, Carter says.
Dr. Joseph E. Jura, associate professor of plant nutrition,
supervised the projects the past two years. Assistance in the work
last year was Noble Underwood, IIV plant industries graduate student.
From Atlanta (Ill.), Carter will supervise the 1960 program while
Jura is on leave to study in Europe.
The first year included a preliminary study of the effect of ammonia
ammonia on the availability of rock phosphate and commercial 1959
studies of the effect of various application rates on the yield of
corn growing on soils of high and low basic fertility. A program
report just issued on the company-supported work so far shows that
1. Anhydrous ammonia fertilizer made more phosphorus available to
plants than did any of four other nitrogen carriers -- ammonium sulfate,
ammonium nitrate, sodium nitrate, and calcium cyanamide -- but there
was no material difference between them in their effect on the per-
centage of crop last year.

2. Applying anhydrous ammonia fertilizer to corn at the rate of 50 pounds of actual nitrogen per acre, either on soils of high or low fertility, is more economical than applying at rates of 100 or 200 pounds. On limed soil low in phosphorus and potassium, the 50-pound rate raised the yield 11.6 bushels per acre last year (from 28.5 to 40.1 bushels), returning \$1.93 for each dollar invested in nitrogen fertilizer.

On more fertile land the 50-pounds application gave an average increase of nearly 24 bushels per acre (from 51 to 75) for three years, returning \$3.97 for each dollar invested. The two higher rates of application decreased yields on the poor soil but gave added increases on the better soil. However, the latter increases were not enough to be as economical for the farmer as the lower rate.

3. Plenty of soil moisture, along with adequate phosphorus and potash, is necessary to get the best response from nitrogen fertilizers. The 1953 season, which had plentiful rainfall during the growing period, gave substantially higher corn yields at all rates of anhydrous ammonia application than in the less favorable 1957 and 1959 seasons.

Release: IMMEDIATE

CARBONDALE, Ill., March -- The teacher's dream of more time for individual student help may come closer to reality because of the work now being done by two professors of Southern Illinois University. Dr. Paul Wendt and Grosvenor Rust of SIU's department of instructional materials have been awarded a grant to conduct experiments in the field of automatic teaching.

The grant of \$42,282 has been made available through the United States Office of Education under Title Seven of the National Defense Education Act. Although results of the research should be of use in numerous fields, the work of the SIU men will be concentrated on developing a course on use of the library. End result will be the eventual work of instructing new students by machine in the use of library facilities, thus freeing library personnel for individual consultation and help.

Work of the grant will involve selection of suitable machinery as well as programming of materials. Machine instruction is done through a series of still pictures, movies and recorded responses, and it is known as automatic tutoring. Students are given material to be learned in small logical units and are tested on each unit immediately.

Test results are used to control the material that the student sees next. If the student passes the test question, he is automatically given the next unit of information and next question. If he fails the test question, the preceding unit of information is reviewed, the nature of his error is explained to him, and he is retested. The test questions are multiple-choice and there is a separate set of correctional materials for each wrong answer that is included in the multiple choice alternative.

(more)

[illegible]

The machines that Rust and Wendt will use in their experiments will be complete, recording, automatic tutoring systems. Such machines now on the market are capable of containing as many as 10,000 teaching frames that can be used in any order, started and stopped at will, and shifted readily from motion to still materials.

Present use of teaching machines has been restricted to government agencies and the armed forces, but plans are now underway in private industry to train personnel by automation. The SIU work is one of the first attempts of educators to train students with machines. Wendt has been associated with similar projects in the past and last year helped conduct an experiment in the teaching of history to 10th grade pupils with the help of a series of films. Outcome of that experiment was that pupils in the experimental classes were able to cover a year's work in history in six months.

Wendt and Rust expect to complete the library project by July of 1961. Working with them will be Miss Opal Stone, Earl Tannebaum and Dr. Ralph McCoy of the SIU library staff.

- mlc -

The machine, that has and which will use in the future will be used to produce records, automatic recording systems. Such machines now on the market are capable of containing as many as 10,000 teaching frames that can be used in any order, started and stopped at will, and edited readily from within the still machine.

Present use of teaching machines has been restricted to government agencies and the armed forces, but plans are now underway in private industry to make use of this machine. The first work in one of the first attempts at education to train students with machines. Words and letters are recorded with similar machines in the past and last year helped create an experiment in the teaching of history to 10th grade pupils with the help of a series of films. Outcome of this experiment was that pupils in the experimental class were able to cover a year's work in history in six months.

Words and films cannot duplicate the library project by July of 1951. Working with them will be Mrs. Carl Jones, Carl Jones and Mrs. Ralph Brown of the New Library staff.

CARBONDALE, ILL., March -- The spotlight will be on Ecuador at Southern Illinois University's seventh annual week-long Pan American Festival April 11-16.

The program will feature public addresses, panel discussions, musical programs, and exhibits dealing with the life and geography of Ecuador and its Latin American neighbors, according to Prof. Basil C. Hedrick, assistant director of the sponsoring SIU Latin American Institute.

Highlighting the program will be Dr. R. E. Crist, University of Florida research professor of geography, and Prof. Pedro Armillas, University of Michigan visiting lecturer and curator of the museum of anthropology. Crist will speak at an evening public lecture in Morris Library auditorium April 13 and will join Armillas in an informal discussion program there during the afternoon. Armillas also will be the morning convocation speaker in Shryock Auditorium April 14 in observance of Pan American Day.

The SIU Festival, first held here in 1954, is devoted to fostering better understanding between the people of the United States and those of Latin American countries. The SIU Institute is an interdepartmental organization for instruction, research, educational services, and exchange of students and instructors in the field of Latin American studies.

Number 343 in a weekly series -- "It Happened in Southern Illinois" -- a series consisting of regional folklore and historical accounts suitable for feature, column, or editorial use.

A QUEER SPRING THAT EBBS AND FLOWS

John W. Allen

Southern Illinois University

An ebb and flow spring is rare, and thus is an attraction worth seeing, even though the visitor must walk a mile from his parked car to reach it.

One of these is low on the bank of the Ohio River between Cave-in-Rock and Elizabethtown in Hardin County, southern Illinois. In fact it is so low on the bank that it is flooded at higher stages of the river. Leonard Hall in his "Stars Upstream," a book describing life along a Missouri river, tells us that there are only 23 such springs in America.

For those unacquainted with such a phenomenon, ebb and flow springs are those which have a water flow that increases and decreases at regular intervals. They flow vigorously for a time and then dwindle to a mere trickle. At some springs the elapsed time is several hours, sometimes a day or more. At the Hardin County spring, it is approximately seven minutes and comes with clocklike regularity, somewhat like the Old Faithful geyser. But intermittent springs are not geysers, however, and their water temperature remains constant.

The visitor naturally begins to wonder when he sees the flow begin its marked decrease; it appears that he came just in time to see the spring run dry. He is even more amazed a few minutes later when a gurgling sound is heard and the water begins to gush again. According to Hall, a large spring of this type on Jack's Fork in the Missouri Ozarks has an estimated flow of a million or more gallons each day, with a time interval of about 24 hours. Hardin County's spring is a small one with a daily flow we would guess to be about 30,000 gallons. One nice feature of the Hardin County spring is the fact that a visitor doesn't have to wait so long to see the cycle completed.

MEMPHIS, TENNESSEE

Number 24 in a weekly series -- "It Happened in Southern Illinois" -- a series
consisting of regional folklore and historical accounts suitable for folklore
colleges, or educational use.

A QUINCY SPRING TIME FLOOD AND FLOOD

John W. Lyons

Southern Illinois University

In the end of the spring, in fact, and there is an attraction worth seeing even

though the visitor must walk a mile from his parked car to reach it.

Of this is few on the bank of the river between Paducah and

Effingham in Hardin County, southern Illinois. In fact it is so low on the

river that it is flooded at higher stages of the river. Locals call it the "state

spring," a name derived from the fact that a Missouri river tells us that there are

only 22 such springs in America.

For those unacquainted with such a phenomenon, the end of the spring and those

who have a winter flow that indicates the decrease of winter intensity. They

flow vigorously for a time and then change to a more regular, it flows through the

spring time is several hours, sometimes a day or more. At the Hardin County

spring, it is approximately seven minutes and comes with clocklike regularity.

seems that the Old Missouri spring, but intelligent spring and not geyser,

however, and their water temperature remains constant.

The visitor naturally begins to wonder when he sees the flow begin its career

spring; it appears that he came just in time to see the spring too late. He is

even more amazed a few minutes later when a swirling sound is heard and the water

begins to gush forth. According to Hall, a large spring of this type on the

bank in the Missouri River has an estimated flow of a million or more gallons each

day, with a flow interval of about 24 hours. Hardin County's spring is a small one

with a daily flow we would guess to be about 20,000 gallons. One other feature of

the Hardin County spring is the fact that a visitor doesn't have to wait to find

see the cycle completed.

spring 2

There is something impressive in the behavior of the little spring. It is not strange that until a generation or so ago, reports were heard of the Indians' strange belief that their Great Spirit caused the spring to act so strangely. The best explanation for the ebb and flow of these unusual springs, however, has it that an enlarged section of the underground channel serves as a temporary reservoir. The outlet from this pool to the spring would be a passage arched upward and then down to form a siphon. When the water level in the storage space reaches a sufficient height, this siphon begins to operate and drains the stored water. Then the pool refills.

A visit to this Hardin County spring offers additional attractions. There are the nearby weathered bluffs and the narrow flood plain littered with fossil-bearing rock fragments. There are some small caves, about the right size for animal dens or for exploration by small boys. The fringe of large cedars along the crest of the bluff is a scenic feature, especially outstanding when the woodland is bare. A short way downriver from the Ebb and Flow spring is Tyner's Spring which has been mentioned as a landmark of the region for a century or more. Interesting ruins of the buildings erected by an early settler are nearby.

If the visitor is interested in plant life, the mile long tramp from his car parked on the gravel road to the spring is an attractive one. On the narrow flood plain sheltered by bluffs on the north and somewhat tempered by the river on its south, the viewer finds some not too familiar plants. Spring flowers come early here. A botanist could spend pleasant hours here and rest between tramps to see the spring as it figuratively shifts gear.

There is something interesting in the history of the little section. It is not strange that until a generation or so ago, reports were heard of the Indians' strange belief that their dead, while passing the section to and fro, were passing the section for the first time. The first explanation for this was that the Indians, upon seeing the section, had it that in a certain section of the underground channel, there was a temporary reservoir. The water from this pool to the spring would be a passage around the mountain and then down to form a spring. When the water level in the spring was reached a sufficient height, this spring began to rise and then the stored water. Then the pool refilled.

A visit to this little corner during the winter season is interesting. There are the rocky weathered bluffs and the narrow flood plain between them. The local-looking rock fragments. There are some small caves, about the right size for animal holes or for excavation by small boys. The bluffs of the canyon are made of the crest of the bluff is a sand reservoir, especially interesting when the weather is dry. A short way downriver from the top of the canyon is a river which has been mentioned as a river of the region for a century or more. Interesting ruins of the civilization which lived in the early section are nearby.

If the visitor is interested in plant life, the little long narrow river is an excellent place to see the plants. The river is an attractive one. On the narrow flood plain sheltered by bluffs on the north and south are many of the river on its south, the view is fine and the river is planted. The river is an early river. A botanist could spend several days here and still not find time to see the river as it flows into the Gulf of Mexico.

spring 3

A variety of birds come here, and bird watchers feel rewarded for their visits.

About the only manmade noises one hears are those of passing river craft, the droning of a distant plane, or the faint sounds of a farm tractor in some field back from the bluff. A visitor to Ebb and Flow Spring can find just about any degree of loneliness he wishes.

Those wishing to reach this out of the way spot can do so by going out of Cave-in-Rock on the lower or river road leading west. Since there are no markers to show the way, it is best to drive about three miles along this gravel road and then stop to ask some oldtimer or boy of the roaming age for directions. Don't give up easily; there are probably 100 people who have lived within a few miles of it and have never seen the strange spring.

A variety of birds come here, and birds will here feed themselves for their

visitors.

About the only animals which are found in these of feeding river
country, the breeding of a distinct species of the fisher family of a few hundred
is now held back from the north. A visitor to Elm and Elm Springs can find
that about any degree of landiness is visited.

Those wishing to reach this out of the way spot must be so by road out

of O'Connell's in the lower of river road leading west. Since there are
no vehicles to show the way, it is best to drive about three miles along this
general road and then stop at the back of the hill of the country and for
directions. Local drive is really; there are nobody but people who have
lived within a few miles of it and have never seen the place before.

SIU COUNTRY COLUMN
By Albert Meyer

Southern Illinois farmers are getting a late start on field work this spring because of the prolonged winter weather. J.J. Paterson, Southern Illinois University agricultural engineer, says this has added to the urgency of having farm machinery in top working condition to avoid delays in the rush to get crops in the ground when farmers can get into the fields.

Tractor operation is one of the larger production cost items on the farm. In this day when farmers are faced with high machinery costs and increased operating expenses which are putting the squeeze on profit chances, it is essential to keep the tractor in good running order, Paterson says. Motor tune-ups and minor repairs not only will prolong the life of the tractor but will increase its power and save time and fuel.

Paterson explains that tests by engineers at various universities have shown that tractor power is increased from 3 to 23 percent by tune-ups. Fuel savings amount to as much as one-half gallon per hour of operation. These improvements, based on tests of a large number of tractors, result from checking and adjusting the valve clearance, the breaker points, the ignition timing, and the carburetor; from cleaning and adjusting the spark plugs, and from cleaning the crankcase breather and the air cleaner.

Plenty of compression, a good spark, and the right kind and amount of fuel are three main requirements for tractor engine to operate satisfactorily. Getting the most out of putting the fuel system in order depends on first tuning up the compression and the ignition. Checking the compression with a gauge placed in the spark plug holes will indicate the condition of the piston rings and the valves. Tuning the ignition system involves cleaning the battery and connections with baking soda and water, checking the condition of battery, and adjusting the timing and other ignition parts.

Tuning up the fuel system includes cleaning the carburetor and sediment bowl thoroughly, checking the float valve and seat as well as feed line connections, and adjusting the fuel and air mixture after the engine is warmed up. Paterson says it is poor economy and hard on valves to run the tractor with too lean a fuel mixture. AM

THE FARM ENGINEER
BY ALBERT E. HARRIS

Southern Illinois farmers are getting a late start on field work this spring because of the prolonged winter weather. J. M. Peterson, Southern Illinois University agricultural engineer, says this has added to the urgency of having farm machinery in top working condition to avoid delays in the rush to get crops in the ground when farmers get into the fields.

Tractor operation is one of the larger production cost items on the farm. In this day when farmers are faced with high machinery costs and increased operating expenses which are putting the squeeze on profit margins, it is essential to have the tractor in good working order, Peterson says. In fact, he says, a tractor that not only will prolong the life of the tractor but will increase the power and save time and fuel.

Peterson explains that tests by engineers at various universities and others show that tractor power is increased from 5 to 25 percent by doing a few things. These include: amount to as much as one-half gallon per hour of operation. These improvements, based on tests of a large number of tractors, result from checking and adjusting the valve clearance, the breaker points, the ignition timing, and the compression. From cleaning and adjusting the spark plugs, and from cleaning the carburetor, breaker and the air cleaner.

Plenty of compression, a good spark, and the right kind and amount of fuel are three main requirements for tractor operation. Getting the most out of putting the fuel system in order depends on first tuning up the compression and the ignition. Checking the compression with a gauge placed in the spark plug hole will indicate the condition of the piston rings and the valves.

Tuning the ignition system involves cleaning the battery and connections with baking soda and water, checking the condition of battery, and adjusting the timing and other ignition parts.

Tuning up the fuel system includes cleaning the carburetor and adjusting bowl thoroughly, checking the float valve and seat as well as fuel line connections, and adjusting the fuel and air mixture after the engine is warmed up. Peterson says it is a poor economy and hard on valves to run the tractor with too lean a fuel mixture.
